

cherty sed deposit

possible small channels

large mapping surface / hard ground over 2km (?) seems too long? possible sl. transport

possible small faults in lower pk 2 but could be imaging artifacts

shallow zone

highly

pk 1 planar dep
 pk 2 cherty near shore then planar deposit
 turbidite flow? fast sand transport
 pk 3
 pk 4 offshore lens deposits large 2-5 km

could be due to fault def

much structure around salt red disturbance

like faulted area w/in pk 2:3 or extend into pk 1
