COMMERCIAL FEEDING STUFFS
FROM SEPTEMBER 1, 1924, TO AUGUST 31, 1925
STATION STAFF

ADMINISTRATION:
B. Youngblood, M. S., Ph. D., Director
A. H. Conner, M. S., Vice-Director
R. E. Karrer, B. S., Assistant Director
A. S. Ware, Secretary
W. H. Holzmann, Chief Clerk
M. E. Holleman, Jr., Assistant Chief Clerk
J. M. SchaedeI, Executive Assistant
C. B. Nettlebee, Technical Assistant

VETERINARY SCIENCE:
*M. Francis, D. V. M., Chief
H. Schmidt, D. V. M., Veterinarian
V. J. Brauner, D. V. M., Veterinarian

CHEMISTRY:
G. S. Fraps, Ph. D., Chief; State Chemist
S. E. Asbury, M. S., Assistant Chemist
W. D. H. Walker, Assistant Chemist
J. K. Blum, B. S., Assistant Chemist
J. E. Teague, B. S., Assistant Chemist
Velma Graham, Assistant Chemist
Adair E. Proctor, B. S., Assistant Chemist
J. N. Volk, M. S., Assistant Chemist
E. C. Carlyle, B. S., Assistant Chemist
R. O. Hooper, M. S., Assistant Chemist

HORTICULTURE:
W. B. Lanham, M. A., Chief
H. Ness, M. S., Berry Breeder

RANGE ANIMAL HUSBANDRY:
J. M. Jones, A. M., Chief; Sheep and Goat Investigations
J. L. Rush, Ph. D., Animal Husbandman; Breeding Investigations
J. J. Hunt, Wool Grader

ENTOMOLOGY:
F. L. Thomas, Ph. D., Chief; State Entomologist
H. J. Reinhard, B. S., Entomologist
C. S. Rude, B. S., Chief Foulbrood Inspector
S. M. McGregor, Jr., Apiary Inspector

AGRONOMY:
E. B. Reynolds, M. S., Chief
A. B. Conner, M. S., Agronomist; Grain Sorghum Research
R. E. Karrer, B. S., Agronomist; Small Grain Research
D. T. Killogh, M. S., Agronomist; Cotton Breeding
R. H. Stansel, B. S., Assistant in Crops

No. 1. Beeville, Bee County:
R. A. Hall, B. S., Superintendent

No. 2. Troup, Smith County:
W. S. Hotchkiss, Superintendent

No. 3. Angleton, Brazoria County:
M. E. Hafner, B. S., Superintendent

No. 4. Beaumont, Jefferson County:
R. H. Wychie, B. S., Superintendent

No. 5. Temple, Bell County:
H. E. Rea, B. S., Superintendent

No. 6. Denton, Denton County:
P. B. Dunkle, B. S., Superintendent

No. 7. Spur, Dickens County:
R. E. Dickson, B. S., Superintendent

No. 8. Lubbock, Lubbock County:
D. L. Jones, Superintendent
FRANK GAINES, Irrigation and Forest Surveyor

No. 9. Balmorhea, Reeves County:
J. J. Bayles, B. S., Superintendent

Plant Pathology and Physiology:
J. J. Taubenhaus, Ph. D., Chief

FARM AND RANCH ECONOMICS:
B. Youngblood, M. S., Ph. D., Farm and Ranch Economist
Gladys D. Deakins, Lindley, M. S., Assistant in Farm and Ranch Economics
V. L. Cory, M. S., Grazing Research Department

SOIL SURVEY:
**T. L. Gaston, Jr., B. S., Assistant, Field Records and Accounts

BOTANY:
H. Ness, M. S., Chief

PUBLICATIONS:
A. D. Jackson, Chief

SWINE HUSBANDRY:
Fred Hall, M. S., Chief

DAIRY HUSBANDRY:
R. M. Sherwood, M. S., Chief

PULTRY HUSBANDRY:
E. H. Temple, B. S., Feed Inspector

MAIN STATION FARM:
G. T. McNeese, Superintendent

APICULTURAL RESEARCH LABORATORY:
M. P. B. Breed, B. S., Apiculturist in Charge

FEED CONTROL SERVICE:
F. D. Fuller, M. S., Chief
S. D. Pierce, Secretary
J. H. Rogers, Feed Inspector

No. 11. Nacogdoches, Nacogdoches County:
H. F. Morris, M. S., Superintendent

No. 12. Chillicothe, Hardeman County:
J. R. Quinby, B. S., Superintendent

No. 13. Sonora, Sutton-Edwards Counties:
E. W. Thomas, B. S., Superintendent
D. H. Bennett, D. V. M., Veterinarian
V. L. Cory, M. S., Grazing Research Board

No. 14. Sonora, Sutton-Edwards Counties:
E. W. Thomas, B. S., Superintendent
D. H. Bennett, D. V. M., Veterinarian
V. L. Cory, M. S., Grazing Research Board

No. 15. Wesaco, Hidalgo County:
W. H. Friend, B. S., Superintendent
E. H. Holmes, B. S., Entomologist

No. 16. Iowa Park, Wichita County:
E. J. Wilson, B. S., Superintendent

Teachers in the School of Agriculture Carrying Cooperative Projects on the Station:
G. W. Adriong, M. S., Associate Professor of Horticulture
S. W. Bilsing, Ph. D., Professor of Entomology
F. A. Buechel, Ph. D., Professor of Agricultural Economics
G. P. Groult, M. S., Professor of Dairy Husbandry
W. C. Lease, Ph. D., Professor of Agricultural Economics
E. O. Pollock, A. M., Assistant Professor of Agronomy.

†As of January 1, 1926
*Dean, School of Veterinary Medicine.
**In cooperation with U. S. Department of Agriculture.
SYNOPSIS

This bulletin is the twentieth report of the inspection of commercial feeding stuffs sold in the State of Texas. In general, the feed market is in good condition, as is evidenced by the small number of irregularities detected. The Texas Feed Law, designed primarily to protect purchasers of commercial feed against adulterated and inferior articles, was enacted by the Legislature in 1905. The same thorough system of inspection has been maintained during the year ended August 31, 1925, as in previous years. The inspectors have visited 9069 firms in 1680 towns and cities and have secured 1518 official samples for chemical analysis and microscopical examination. The bulletin gives data which show to what extent feed manufacturers are complying with the provisions of the law. Feed dealers and consumers are advised to carefully study this bulletin in order to become familiar with the official definitions of feeding stuffs and standards adopted, and to purchase feed from firms which make shipments according to law and which maintain their guarantees in every respect.

COMMERCIAL FEEDING STUFFS; SEPTEMBER 1, 1924, TO AUGUST 31, 1925*

B. YOUNGBLOOD

F. D. FULLER S. D. PEARCE

In this bulletin is presented the work of the Texas Agricultural Experiment Station in the inspection of feeding stuffs found in the markets of the State during the year ended August 31, 1925, as provided for by the Texas Feed Law of 1905.

DEFINITIONS OF TERMS

Moisture is present in all feeding stuffs. The material may seem to be dry, but, nevertheless, it contains an appreciable amount of water which is determined by heating a known quantity of the feed at the temperature of boiling water for several hours and noting the loss of weight. No very close comparison can be made of the value of feeding stuffs, unless they are compared on a moisture-free basis.

Protein is a term which includes all the nitrogenous compounds of a feed, regardless of their nature. The animal uses protein to restore the waste of tissues and muscles, and form flesh. Protein may also be oxidized in the body to produce heat or it may serve as a source of fat in case of a deficiency in carbohydrates and fat accompanied by an excess of protein. It is, however, a costly source of heat and fat.

Protein enters very largely into the composition of the white of egg, lean meat, curd of milk, gelatin, etc., and, therefore, is a very necessary ingredient for the feeder to purchase. It is the most important nutrient in feeding stuffs and usually is the most expensive to purchase. With a given feeding stuff, the more protein it contains the better its quality, compared with other feeding stuffs of the same class.

It is impossible, however, to compare the value of feeding stuffs of different kinds on a protein basis alone. For example, a cottonseed meal containing 45 per cent of protein does not have five times the value of corn chops containing 9 per cent of protein. There are other constituents of both feeds, namely, fat and carbohydrates, which are of great value to animals, and corn chops contain more carbohydrates than cottonseed meal.

Fat is composed of substances which are extracted from the dry feeding stuffs by ether, and consists chiefly of fats and oils in the case of most feeding stuffs, but in the case of fodders and hays, it is composed to a great extent of waxes, chlorophyll and other substances. A pound of digestible fat is equal to 2.25 pounds of carbohydrates in producing heat and energy. Fat is used

*The chemical analyses reported in this bulletin were made by the Division of Chemistry under the direction of Dr. G. S. Fraps.
in the animal body as a source of body fat, to furnish heat to keep its body warm, and energy to run the animal mechanism and produce work. All involuntary muscular movements require energy, which is furnished by the oxidation of fats, carbohydrates or protein. An excess of fat in feeding stuffs tends to retard digestion and certain feeds containing over 10 per cent may become sour and unpalatable. Fat ranks next to protein in value as a feeding constituent.

**Crude Fiber** is found chiefly in the woody part of grains, hay and other woody material, and is usually the most indigestible portion of a feed. By means of fermentation in the intestines crude fiber is digested to some extent by animals which chew the cud. The operation, however, consumes so much energy that a large proportion of the value of the crude fiber is taken up by the process of digestion. Ordinarily a feeding stuff having a high content of crude fiber is classed as a low-grade feed. Cottonseed hulls, oat hulls, peanut hulls, rice hulls, corn cobs and materials of a similar nature contain a high percentage of crude fiber. For the reason that the consumer can usually provide sufficient fibrous materials, it is unwise for him to expend money for the purchase of feeding stuffs containing a large amount of this difficultly digestible constituent. If the crude fiber in cottonseed meal exceeds certain limits, it indicates that the feed is adulterated with cottonseed hulls. In a similar way crude fiber in excess of a given standard indicates the presence of corn cobs or corn bran in corn chops, rice hulls in rice bran, etc.

**Ash** is the residue left after submitting a portion of the feeding stuff to the action of low heat. It represents mostly that portion of the plant which comes from the soil and contains a certain amount of sand, chiefly consists of the alkalies, lime, magnesia, soda and potash combined with chlorine and carbonic, sulphuric or phosphoric acid. Ash is very valuable to the animal inasmuch as it furnishes material for the formation of bones, without which the health of the animal would be seriously interfered with. An excessive amount of ash in a feed indicates adulteration with dirt, sand or other mineral matter.

**Nitrogen-free Extract** includes starch, sugar, gums and other bodies of a similar nature. These, together with the fat, maintain the animal heat and furnish energy for the production of work required, provided the animal is sufficiently nourished. The nitrogen-free extract of most feeding stuffs of a concentrated nature is composed largely of sugars and starches which are readily digested.

**AVERAGE COMPOSITION OF FEEDING STUFFS ON BASIS OF INSPECTION**

Table 1 shows the average composition of many feeding stuffs analyzed during the past year. The analyses of mixed and proprietary feeds are not included in this table.

**FIBER STANDARDS FOR SHORTS**

During the past six years the Association of Feed Control Officials of the United States has studied the subject of definitions of and standards for wheat mill feeds through the Wheat Feed Committee. The millers requested that the fiber standard for wheat gray shorts, with or without screenings, be fixed at 6.50 per cent, but the association would not agree to adopt this standard. At the last meeting of the association held in Washington in October, 1925, the millers presented evidence to support their views but receded from their former position and agreed to cooperate with the Feed Control Officials.
on a 6 per cent fiber standard. The Feed Control Officials adopted 6 per cent as the standard, the representatives of the mills agreed to give complete cooperation, and the officials of the individual States present practically all said they would adopt the 6 per cent standard and enforce it strictly. Uniformity in the States and the cooperation of the manufacturers will clarify the situation, which at present is not satisfactory on account of the variations in the composition of wheat gray shorts.

Effective in Texas, November 19, 1925, the official fiber standards for wheat gray shorts and wheat brown shorts, with or without screenings, are 6 per cent and 7.50 per cent, respectively.

TENTATIVE STANDARDS FOR SPECIAL-PURPOSE MIXED FEEDS

There have been many special-purpose mixed feeds upon the market in this State, which are not suitable for the purpose to be served. A feed should not be called cow feed, hog feed, horse and mule feed, laying mash, etc., unless it is especially suitable for the purpose intended. For this reason it was considered advisable to take some action looking toward the improvement in the character of these feeds. It was thought advisable to begin by adopting chemical standards for four of the principal special-purpose mixed feeds; namely, cow or dairy feed, horse and mule feed, hog feed and laying mash. The following standards were adopted tentatively for use in connection with the administration of the Texas Feed Law and became effective on and after July 1, 1925:

**Cow or Dairy Feed**

<table>
<thead>
<tr>
<th>Protein not less than</th>
<th>15.00 per cent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fat not less than</td>
<td>3.00 per cent</td>
</tr>
<tr>
<td>Fiber not more than</td>
<td>16.00 per cent</td>
</tr>
</tbody>
</table>

**Horse and Mule Feed**

<table>
<thead>
<tr>
<th>Protein not less than</th>
<th>9.00 per cent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fat not less than</td>
<td>2.00 per cent</td>
</tr>
<tr>
<td>Fiber not more than</td>
<td>15.00 per cent</td>
</tr>
</tbody>
</table>

**Hog Feed**

<table>
<thead>
<tr>
<th>Protein not less than</th>
<th>14.00 per cent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fat not less than</td>
<td>3.50 per cent</td>
</tr>
<tr>
<td>Fiber not more than</td>
<td>7.00 per cent</td>
</tr>
</tbody>
</table>

**Laying Mash**

<table>
<thead>
<tr>
<th>Protein not less than</th>
<th>18.00 per cent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fat not less than</td>
<td>3.50 per cent</td>
</tr>
<tr>
<td>Fiber not more than</td>
<td>7.00 per cent</td>
</tr>
</tbody>
</table>

and 20 per cent of the mixture must be of animal origin.

These standards are considered general enough to permit reasonable variations in manufacture and they were made tentative in order that corrections may be made if found advisable.
DIGESTIBLE PROTEIN AND PRODUCTIVE ENERGY OF FEEDS

We are able to compute the commercial value of fertilizers but it is impossible to state fixed relative money values of feeding stuffs. It would be interesting and exceedingly valuable to be able to calculate what should be considered the cost of protein, carbohydrates, and fats as based upon the ton prices of a variety of feeds. This information would enable us to compare feeds on a basis of money value, but would not furnish information concerning the value of a given feed for restoring the waste of tissues or muscles, and forming flesh. At the present time the value of a feed for this important work is measured by means of its content of digestible protein.

The value of a feed for supplying warmth, energy, or for productive purposes is measured by the quantity of fat that it will produce upon a fattening animal. This productive energy, stated in terms of therms, is the most advanced method of estimating the value of a feeding stuff. By means of the content of digestible protein and the productive energy, it is possible to compare one feed with another and, therefore, determine which one is the most valuable for feeding purposes.

The following Table No. 2 shows the average digestible protein and productive energy of feeds, based upon the figures given in Table No. 1. The method used in arriving at these figures is described fully in Bulletin No. 329.

Table 2.—Digestible Protein and Productive Energy of Average of Feed Control Samples

Given in Table 1*

*Calculated by the Division of Chemistry under the direction of Dr. G. S. Fraps.
ADVICE TO PURCHASERS OF FEED

Official Tag.—Do not accept any feeding stuff unless Texas tax tags are attached to the sacks, and purchase only those brands which are manufactured by companies whose record of inspection shows that their guarantees are maintained.

Examine Official Tag.—In purchasing feeding stuffs, always carefully examine the official tags attached and purchase on the official guarantee and actual analysis as indicated in the reports of the Division of Feed Control Service, and disregard statements of salesmen or in advertising matter, if they differ from the official tag.

Goods Not as Represented.—In case any purchaser receives goods which he thinks are not as represented, he may write to the Division of Feed Control Service, giving full details of the matter, stating the quantity on hand and his reasons for suspecting the feed is not as represented. The Division will investigate the matter carefully and either send an inspector, if conditions justify so doing, or else send instructions for taking a sample of the feed for further examination.

Freight Bills, Invoices, Etc.—It is important that purchasers of feed in car lots should always have available for use of the inspector the following information: The total number of tons in the shipment; number and initials of car in which shipment is received; number and date of waybill; name of railroad issuing waybill; name of town from which shipment was made; name of firm from which feed was purchased; date of original waybill; date shipment was received and price per ton. This information is especially valuable to the Service in all cases involving the shipment of feed from other States, as it will assist in proving the sale and protecting Texas purchasers under the Federal law.

STANDARDS AND DEFINITIONS ADOPTED

The Texas Feed Law empowers the Director of the Texas Agricultural Experiment Station to adopt names, standards and definitions for feeding stuffs. The Director may refuse the registration of any feeding stuffs under a name which is misleading as to the materials of which it is made or which does not conform to the standards and definitions adopted. If a feeding stuff is registered and then discovered to be in violation of the standards and definitions adopted, the Director has the power to cancel the registration after ten days' notice. If a manufacturer is uncertain as to how a certain brand should be registered, it will be advisable for him to correspond with the Division of Feed Control Service before making application for registration.

In accepting applications for the registration of feeding stuffs to be sold in Texas, many of the definitions adopted by the Association of Feed Control Officials are followed closely. In addition to the official definitions, the following includes standards and definitions formulated by the Division of Feed Control Service from the most reliable data available. Definitions not from A. F. C. O. are marked with an asterisk (*).
COMMERCIAL FEEDING STUFFS

Alfalfa Products

Alfalfa Meal is the entire alfalfa hay ground and does not contain an admixture of ground alfalfa straw or other foreign materials. Standard: It must contain not less than 13 per cent of crude protein and 1 per cent of crude fat, and not more than 30 per cent of crude fiber.

Chopped Alfalfa is the entire alfalfa hay chopped and not ground finely enough to become a meal. It must not contain an admixture of alfalfa straw or other foreign materials. Standard: It must contain not less than 13 per cent of crude protein and 1 per cent of crude fat, and not more than 32 per cent of crude fiber.

Animal Products

Blood Meal is ground dried blood.

Cracklings are the residue after partially extracting the fats and oils from the animal tissues. If they bear a name descriptive of their kind, composition or origin, they must correspond thereto.

Digester Tankage is the residue from animal tissues, exclusive of hoof and horn, especially prepared for feeding purposes by tanking under live steam, drying under high heat, and suitable grinding, and contains less than 10 per cent phosphoric acid (P₂O₅).

Digester Meat and Bone Tankage is the residue from animal tissues, exclusive of hoof and horn, especially prepared for feeding purposes by tanking under live steam, drying under high heat, and suitable grinding, and contains more than 10 per cent phosphoric acid (P₂O₅).

Meat Scrap and Meat Meal are the ground residues from animal tissues, exclusive of hoof and horn, and contains less than 10 per cent phosphoric acid (P₂O₅). If they bear a name descriptive of their kind, composition or origin, they must correspond thereto.

Meat and Bone Scrap and Meat and Bone Meal are the ground residues from animal tissues, exclusive of hoof and horn, and contains more than 10 per cent phosphoric acid (P₂O₅). If they bear a name descriptive of their kind, composition or origin, they must correspond thereto.

Barley Products

Barley Mixed Feed* consists of barley bran and shorts combined in the proportions obtained in the usual process of commercial milling for the manufacture of barley flour. If in the above feed there are contained any barley hulls, or screenings, either ground or unground, bolted or unbolted, such feed shall be so registered, labeled and sold, as to clearly indicate this fact. The word “Screenings” or “Hulls” shall appear as part of the name of the brand and shall be printed in type of the same size and face as the remainder of the brand name.
Barley Hulls are the outer coverings of the barley.

Barley Feed is the entire by-product resulting from the manufacture of pearl barley from clean barley.

Ground Barley is the entire product obtained by grinding clean, sound barley, containing not less than 90 per cent pure barley and not more than 10 per cent of other grains, weed seeds and other foreign material and not more than 6 per cent fiber. Provided that no portion of this stated 10 per cent of other grains, weed seeds or foreign material shall be deliberately added.

Mixed Feed Barley is the entire product obtained by grinding country run barley containing not less than 75 per cent pure barley and not more than 25 per cent of other grains, weed seeds and other foreign material. Provided that no portion of this stated 25 per cent of other grains, weed seeds or foreign material shall be deliberately added. The ingredients must be stated as barley, other grains, weed seeds and other foreign material.

Brewers' and Distillers' Products

Brewers' Dried Grains are the properly dried residue from cereals obtained in the manufacture of beer.

Distillers' Dried Grains are the dried residue from cereals obtained in the manufacture of alcohol and distilled liquors. The product shall bear the designation indicating the cereal predominating.

Distillers' Corn Solubles, a by-product from the manufacture of alcohol from corn, is a mash liquor concentrated after the removal of the alcohol and wet grains.

Distillers' Corn and Rye Solubles, a by-product from the manufacture of alcohol from corn and rye, is a mash liquor concentrated after the removal of the alcohol and wet grains.

Distillers' Rye Solubles, a by-product from the manufacture of alcohol from rye, is a mash liquor concentrated after the removal of the alcohol and wet grains.

Malt Sprouts are the sprouts of the barley grain obtained in the malting process. Sprouts derived from any other malted cereal must be designated by the name of that cereal.

Corn Products

Corn Chops consists of the pure grain of corn from sound seed and good quality, chopped. Standard: It must contain not less than 9 per cent of crude protein and 3.5 per cent of crude fat, and not more than 3 per cent of crude fiber.

Corn Bran is the outer coating of the corn kernel. Standard: It must contain not less than 8 per cent of crude protein and 5 per cent of crude fat, and not more than 13 per cent of crude fiber.
COMMERCIAL FEEDING STUFFS

Corn Germ Cake is the product obtained in the manufacture of starch, glucose and other corn products and consists of the germ from which part of the corn oil has been extracted.

Corn Germ Meal is ground corn germ cake.

Corn Feed Meal* is the by-product obtained in the manufacture of cracked corn or table meal from the whole grain of corn. Standard: It must contain not less than 8 per cent of crude protein and 3 per cent of crude fat, and not more than 3 per cent of crude fiber.

Corn Gluten Feed is that portion of commercial shelled corn that remains after the separation of the larger part of the starch and the germs by the processes employed in the manufacture of cornstarch and glucose. It may or may not contain corn solubles.

Corn Gluten Meal is that part of commercial shelled corn that remains after the separation of the larger part of the starch, the germ and the bran, by the processes employed in the manufacture of cornstarch and glucose. It may or may not contain corn solubles.

Maltose Process Corn Gluten Feed is the dried residue from degermed corn, after removal of starch in the manufacture of malt syrup.

Ear Corn Chops is corn and cob, chopped, without the husk, with not a greater proportion of cob than occurs in the ear corn in its natural state. Standard: It must contain not less than 8 per cent of crude protein and 3 per cent of crude fat, and not more than 8 per cent of crude fiber.

Hominy Feed or Hominy Meal* is a mixture of the bran coating, the germ and a part of the starchy portion of the corn kernel obtained in the manufacture of hominy grits for human consumption. Standard: It must contain not less than 10 per cent of crude protein and 6 per cent of crude fat, and not more than 7 per cent of crude fiber.

Grits are the hard, flinty portions of Indian corn containing no bran or germ.

Cottonseed Products*

*The percentage of cottonseed hulls contained in cottonseed feed must be shown on the tags in order that this product may not be considered adulterated.

48 Per Cent Protein Cottonseed Meal, Prime Quality, must be reasonably bright in color, not brown or reddish, sweet in odor, and free from excess of lint. Standard: It must contain not less than 48 per cent of crude protein and not less than 55 per cent of crude protein and crude fat combined, and not more than 9 per cent of crude fiber.

45 Per Cent Protein Cottonseed Meal, Prime Quality, must be reasonably bright in color, not brown or reddish, sweet in odor, and free from excess of lint. Standard: It must contain not less than 45 per cent of crude protein, and not less than 51 per cent of crude protein and crude fat combined, and not more than 10 per cent crude fiber.
43 Per Cent Protein Cottonseed Meal, Prime Quality, must be reasonably bright in color, not brown or reddish, sweet in odor, and free from excess of lint. Standard: It must contain not less than 43 per cent of crude protein and not less than 49 per cent of crude protein and crude fat combined, and not more than 12 per cent of crude fiber.

Cottonseed Meal, Off Quality. Cottonseed meal not fulfilling the above requirements as to color, odor or texture shall be branded “Off Quality,” that is, “43 Per Cent Protein Cottonseed Meal, Off Quality.” Higher grades shall be similarly designated.

Cottonseed Cake shall correspond to cottonseed meal in composition and as to standards and classifications.

41.12 Per Cent Protein Ground Cottonseed Feed must be reasonably bright in color, sweet in odor, and must contain not more than 5 per cent of delinted cottonseed hulls. Standard: It must contain not less than 41.12 per cent of crude protein and not less than 46.12 per cent of crude protein and crude fat combined, and not more than 14 per cent of crude fiber.

38.56 Per Cent Protein Ground Cottonseed Feed must be reasonably bright in color, sweet in odor, and must contain not more than 12 per cent of delinted cottonseed hulls. Standard: It must contain not less than 38.56 per cent of crude protein and not less than 43.56 per cent of crude protein and crude fat combined, and not more than 18 per cent of crude fiber.

36 Per Cent Protein Ground Cottonseed Feed must be reasonably bright in color, sweet in odor, and must contain not more than 17.50 per cent of delinted cottonseed hulls. Standard: It must contain not less than 36 per cent of crude protein and not less than 41 per cent of crude protein and crude fat combined, and not more than 22 per cent of crude fiber.

Cracked Cottonseed Feed shall correspond to ground cottonseed feed as to standards and classifications.

28 Per Cent Protein Cold Pressed Cottonseed, Prime Quality, is the product resulting from subjecting the whole, sound, mature, clean, undecorticated cottonseed to the cold pressure process for the extraction of oil, and includes the entire cottonseed, less the lint, and the oil extracted. Standard: It must contain not less than 28 per cent of protein.

25 Per Cent Protein Cold Pressed Cottonseed, Prime Quality, is the product resulting from subjecting the whole, sound, mature, clean, undecorticated cottonseed to the cold pressure process for the extraction of oil, and includes the entire cottonseed, less the lint, and the oil extracted. Standard: It must contain not less than 25 per cent of protein.

Ground Cold Pressed Cottonseed is cold pressed cottonseed, ground. It must correspond to cold pressed cottonseed in composition and as to standards and classifications.
Feterita Products

Feterita Chops consists of the entire grain removed from the head and chopped. Standard: It must contain not less than 11 per cent of protein, 2.8 per cent of fat, and not more than 3 per cent of crude fiber.

Feterita Head Chops consists of the entire head, chopped. Standard: It must contain not less than 10 per cent of protein, 2.50 per cent of fat, and not more than 8 per cent of crude fiber.

Kafir Products

Kafir Chops consists of the entire grain removed from the head and chopped. Standard: It must contain not less than 9 per cent of protein, 2.50 per cent of fat, and not more than 3 per cent of crude fiber.

Kafir Head Chops consists of the entire head, chopped. Standard: It must contain not less than 8.50 per cent of protein, 2.50 per cent of fat, and not more than 8 per cent of crude fiber.

Kafir Head Stems consists of the head of kafir from which the grain has been removed.

Linseed and Flax Products

Linseed Cake or Meal is oil cake or meal made from flaxseed, provided that the final product shall contain less than 6 per cent of weed seeds and other foreign materials and, provided further, that no portion of the stated 6 per cent of weed seeds and other foreign materials shall be deliberately added.

Old Process Oil Meal, Old Process Linseed Meal is oil meal as defined or linseed meal as defined produced by crushing, cooking and hydraulic pressure.

New Process Oil Meal, New Process Linseed Meal is oil meal as defined or linseed meal as defined produced by crushing, heating and the use of solvents.

Flax Plant By-Product is that portion of the flax plant remaining after the separation of the seed, the bast fiber and a portion of the shives, and consists of flax shives, flax pods, broken and immature flax seeds, and the cortical tissues of the stem.

Ground Flaxseed or Flaxseed Meal is the product obtained by grinding flaxseed which has been screened and cleaned of weed seeds and other foreign materials by the most improved commercial processes, provided that the final product shall contain less than 4 per cent of weed seeds and other foreign materials, and provided further that no portion of the stated 4 per cent of weed seeds and other foreign materials shall be deliberately added.

Unscreened Flaxseed Oil Feed Cake is the product obtained by extraction of part of the oil from unscreened flaxseed by crushing, cooking and hydraulic pressure, or by crushing, heating and the use of solvents. The ingredients shall be stated as partially extracted flaxseed and foreign seeds (wheat, wild buckwheat, pigeon grass, wild mustard, etc.).
Ground Unscreened Flaxseed Oil Feed is the ground unscreened flaxseed oil feed cake.

Screenings Oil Feed is the ground product obtained after extraction of part of the oil by crushing, cooking and hydraulic pressure, or by crushing, heating and the use of solvents from the smaller imperfect grains, weed seeds and other foreign materials, having feeding value, separated in cleaning the grain. The name of the grain from which the screenings are separated shall be prefixed to "screenings oil feed."

Milo Products

Milo Chops consists of the entire grain removed from the head and chopped. Standard: It must contain not less than 10 per cent of protein, 2.50 per cent of fat, and not more than 3 per cent of crude fiber.

Milo Head Chops consists of the entire head, chopped. Standard: It must contain not less than 8 per cent of protein, 2.50 per cent of fat, and not more than 8 per cent of crude fiber.

Milo Head Stems consists of the head of the milo from which the grain has been removed.

Oat Products

Oat Groats are the kernels of the oat.

Oat Hulls are the outer coverings of the oat.

Oat Middlings are the floury portions of the oat groat obtained in the milling of rolled oats.

Oat Shorts are the covering of the oat grain lying immediately inside the hull, being a fuzzy material carrying with it considerable portions of the fine floury part of the groat obtained in the milling of rolled oats.

Clipped Oat By-Product* is chiefly oat hull clippings, obtained in clipping whole oats. It may contain light chaffy material broken from the ends of the hulls, empty hulls, light, immature oats and dust.

Peanut Products*

48 Per Cent Protein Peanut Meal is the product from the kernels of sound peanuts, free from excess of hulls and other foreign materials. Standard: It must be finely ground and of sweet odor, and must contain not less than 48 per cent of protein, not less than 7 per cent of fat, and not more than 9 per cent of crude fiber.

45 Per Cent Protein Peanut Meal is the product from the kernels of sound peanuts, free from excess of hulls and other foreign materials. Standard: It must be of sweet odor, and contain not less than 45 per cent of protein, not less than 6 per cent of fat, and not more than 14 per cent of crude fiber.
COMMERCIAL FEEDING STUFFS

43 Per Cent Protein Peanut Meal is the product from the kernels of sound peanuts, reasonably free from excess of hulls and other foreign materials. Standard: It must be of sweet odor, and contain not less than 43 per cent of protein, not less than 6 per cent of fat, and not more than 17 per cent of crude fiber.

Peanut Cake shall correspond to peanut meal in composition and as to standards.

Choice Whole Pressed Peanuts is the product resulting from subjecting the whole, sound, mature, clean peanuts, free from sticks, stems and dirt, to pressure for the extraction of oil, and includes the entire peanut less the oil extracted. Standard: It must contain not less than 36 per cent of protein and not more than 22 per cent of crude fiber.

Prime Whole Pressed Peanuts is the product resulting from subjecting the whole, sound, mature, clean peanuts, reasonably free from sticks and stems, to pressure for the extraction of oil, and includes the entire peanut less the oil extracted. Standard: It must contain not less than 34 per cent of protein and not more than 24 per cent of crude fiber.

Ground Whole Pressed Peanuts shall correspond to whole pressed peanuts in composition and as to standards.

Rice Products

Rice Bran is the pericarp or bran layer of the rice, with only such quantity of hull fragments as is unavoidable in the regular milling of rice. Standard: It must contain not less than 11 per cent of crude protein and 10 per cent of crude fat, and not more than 15 per cent of crude fiber.

Rice Polish is the finely powdered material obtained in polishing the kernel. Standard: It must contain not less than 11 per cent of crude protein and 6 per cent of crude fat, and not more than 4 per cent of crude fiber.

Rice Hulls are the outer coverings of the rice.

Sorghum Products

Sorghum Chops consists of the entire grain removed from the head and chopped. Standard: It must contain not less than 9 per cent of crude protein and 2.5 per cent of crude fat, and not more than 3 per cent of crude fiber.

Sorghum Head Chops consists of the entire head, chopped. Standard: It must contain not less than 8 per cent of crude protein and 2.5 per cent of crude fat, and not more than 8 per cent of crude fiber.

Sorghum Head Stems consists of the head of sorghum from which the grain has been removed.
Sugar Beet Product

**Dried Beet Pulp** is the dried residue from sugar beets which have been cleaned and freed from crowns, leaves and sand, and which have been extracted in the process of manufacturing sugar.

**Wheat Products**

**Wheat Bran** is the coarse outer coating of the wheat kernel as separated from cleaned and scoured wheat in the usual process of commercial milling. Standard: It must contain not less than 14.50 per cent of crude protein and 3 per cent of crude fat, and not more than 10 per cent of crude fiber.

**Wheat Red Dog**, a by-product obtained in the usual commercial process of flour milling, consists principally of aleurone with small quantities of flour and fine bran particles and shall not contain more than 4 per cent of crude fiber.

**Wheat Brown Shorts** (Red Shorts) consists mostly of the fine particles of bran, germ and very little of the fibrous offal obtained from the "tail of the mill." This product must be obtained in the usual commercial process of milling. Standard: It must contain not less than 15 per cent of crude protein and 3.5 per cent of crude fat, and not more than 7.5 per cent of crude fiber.

**Wheat Gray Shorts** (Gray Middlings or Total Shorts) consists of the fine particles of the outer bran, the inner bran or bee-wing bran, the germ and the offal or fibrous material obtained from the "tail of the mill." This product must be obtained in the usual process of commercial milling. Standard: It must contain not less than 15 per cent of crude protein and 3.5 per cent of crude fat, and not more than 6 per cent of crude fiber.

**Wheat White Shorts** consists of a small portion of the fine bran particles and the germ and a large portion of the fibrous offal obtained from the "tail of the mill." This product must be obtained in the usual process of flour milling. Standard: It must contain not less than 14.5 per cent of crude protein and 3 per cent of crude fat, and not more than 3.5 per cent of crude fiber.

**Wheat Mixed Feed** (Mill Run Wheat Feed) consists of pure wheat bran and the gray or total shorts or flour middlings combined in the proportions obtained in the usual process of commercial milling. Standard: It must contain not less than 15 per cent of crude protein and 3.5 per cent of crude fat and not more than 8.5 per cent of crude fiber.

**Screenings** consist of the smaller imperfect grains, weed seeds and other foreign material, having feeding value, separated in cleaning the grain.

**Scourings** consists of such portions of the cuticle, brush, white caps, dust, smut and other such materials as are separated from the grain in the usual commercial process of scouring.

*(Note.)*—If to any of the wheat by-product feeds there should be added screenings or scourings, as defined, either ground or unground, bolted or unbolted, such brand shall be so registered, labeled and sold as clearly to indicate...
this fact. The word “Screenings” or “Scourings,” as the case may be, shall appear as a part of the name or brand and shall be printed in type of the same size and face as the remainder of the brand name. When the word “Screenings” appears it is not necessary to show also on the label the word “Scourings.”

Recleaned Wheat Screenings* shall consist of the smaller imperfect grains of wheat after all weed seeds and other foreign materials have been removed.

Wheat Chops* is the entire berry of sound wheat, chopped. Standard: It must contain not less than 12 per cent of crude protein and 2 per cent of crude fat, and not more than 3 per cent of crude fiber.

Miscellaneous Products

Meal is the clean, sound, ground product of the entire grain, cereal or seed which it purports to represent.

Yeast or Vinegar Dried Grains are the properly dried residue from the mixture of cereals, malt and malt sprouts (sometimes cottonseed meal) obtained in the manufacture of yeast or vinegar, and consist of corn or corn and rye from which most of the starch has been extracted, together with malt added during the manufacturing process to change the starch to sugars, and malt sprouts (sometimes cottonseed meal) added during the manufacturing process to aid in filtering the residue from the wort and serve as a source of food supply for the yeast.

Palm Kernel Oil Meal is the ground residue from the extraction of part of the oil by pressure or solvents from the kernel of the fruit of Elaeis guineensis or Elaeis malanococca.

Ground Velvet Bean and Pod is the product derived by grinding velvet beans “in the pod.” It contains no additional pods or other materials.

Velvet Bean Meal is ground velvet beans containing only an unavoidable trace of hulls or pods.

Cocoanut Oil Meal or “Copra Oil Meal” is the ground residue from the extraction of part of the oil from the dried meat of the cocoanut.

Dried Buttermilk Feed, is the product resulting from the removal of water from clean, sound buttermilk derived from natural cream to which no foreign substances have been added, excepting such as are necessary and permitted in the manufacture of butter. It contains, all tolerances being allowed for, not more than eight per cent of moisture and not more than thirteen per cent of mineral matter (ash).

Fish Meal is the clean, dried ground tissues of undecomposed fish, with or without the extraction of part of the oil.

Fish Residue Meal is the clean undecomposed residue from the manufacture of glue or other fishery products from non-oily fish.
Processed Garbage is composed of garbage collected sufficiently often so that harmful decomposition has not set in; screened, dried and separated from metal, crockery, glass and similar material. Its odor must not be suggestive of pronounced decomposition and it must contain less than 1 per cent of glass in fine pieces, none of which shows knife-like or needle-like particles. Provided further that the maximum percentage of glass be stated on the label.

Ivory Nut Meal is the ground waste material resulting from the manufacture of buttons and similar articles from the vegetable ivory nut.

Tentative Definitions

†Evaporated Buttermilk Feed, Concentrated Buttermilk Feed, Condensed Buttermilk Feed, is the product resulting from the removal of a considerable portion of water from clean, sound buttermilk derived from natural cream to which no foreign substances have been added excepting such as are permitted and necessary in the manufacture of butter. It contains, all tolerances being allowed for, not less than thirty per cent (30.0%) of total solids and not more than four per cent (4.0%) of mineral matter (ash).

†Meat Meal is ground dried residue, after partially extracting the fats and oils from animal tissues, exclusive of hoof, horn, manure, and stomach contents. It must not contain more than 10% phosphoric acid (P₂O₅). This definition applies to both dry rendered and tanked products. When this name is used the list of ingredients on the bag or tag must contain the words “tankage” or “cracklings” or both, as the case may be. If this product contains more than 10% phosphoric acid (P₂O₅) it shall be designated “Meat and Bone Meal.”

†Meat Scrap is ground and screened Cracklings or Meat Meal. It shall not contain more than 10% of phosphoric acid (P₂O₅). If the product contains more than 10% phosphoric acid (P₂O₅) it shall be designated “Meat and Bone Scrap.”

†Cracklings is the residue after partially extracting the fat and oils from animal tissues, exclusive of hoof, horn, manure and stomach contents, by an open kettle or by dry rendering process.

†Digester Tankage is the residue from animal tissues, exclusive of hoof, horn, manure, and stomach contents, especially prepared for feeding purposes, by tanking under live steam, and by suitable drying and grinding. It shall not contain more than 10% of phosphoric acid (P₂O₅). If this product contains more than 10% phosphoric acid (P₂O₅) it shall be designated “Meat and Bone Digester Tankage.”

The following resolutions have been adopted by the Association of Feed Control Officials of the United States:

Resolved, That it is the sense of this Association that we understand the term “Nitrogen-free Extract” to cover the product indicated by the percentage obtained by subtracting from 100 per cent the sum of the percentages of Ash, Moisture, Protein, Fat and Fiber;

Resolved, That the term “Carbohydrates” be interpreted to cover the product indicated by the percentage obtained by the addition of the percentages of crude fiber and nitrogen-free extract;

†Final action to be taken at the next annual meeting of the A. F. C. O.
Resolved, That it is the sense of this Association that a ton of feed be 2000 pounds, net;

Resolved, That this Association go on record as opposing the use of second-hand bags unless they are turned wrong side out so that the original stencilling will not be displayed;

Resolved, That the Association go on record to the effect that the term cracked corn does not apply to degermed cracked corn;

Resolved, That this Association go on record as condemning the practice of packing feeding stuffs in bags containing 99 pounds net and billing and charging for the same 100 pounds net;

Whereas, Linseed Oil Meal is sold more or less on the basis of the protein content, as in the case of cottonseed meal; therefore, be it

Resolved, That the percentage of protein should be prefixed to linseed, cake or meal, as is done with cottonseed meal; for example, 34 per cent protein linseed meal.

**TENTATIVE GUARANTEES FOR FEEDS**

The following table shows tentative guarantees for the convenience of manufacturers in registering feeding stuffs for sale in Texas. There will be no objection if manufacturers wish to register under better guarantees if the quality of the feeds justify this action. It is to be understood, however, that manufacturers are responsible for their guarantees and that the Division of Feed Control Service accepts no responsibility for feeds failing to meet the guarantees.

PURPOSE OF THE TEXAS FEED LAW

The purpose of the Texas Feed Law is to afford protection to manufacturers and purchasers of feeding stuffs in the State of Texas.

Through the rigid enforcement of the law the Division of Feed Control Service furnishes protection against adulterated feed which has resulted in many low-grade feeds being withdrawn from the market. Consumers have become better
acquainted with the value of various materials used for feeding animals, and they are enabled to purchase feeds more profitably than before the feed law was enacted. By comparing the ingredients, analyses and prices of various feeds, the purchaser is enabled to determine for himself which feeding stuff is best suited for his particular need. If he should have any difficulty in this regard, he may write to the Division for additional information.

The honest manufacturer of feeding stuffs is protected by the development and impartial enforcement of uniform standards and definitions which have a tendency to eliminate unfair competition. Every manufacturer is expected to comply with the law, not only for the sake of compliance, but because in the long run it is the wiser course. The manufacturer who habitually complies with the law has the confidence of the consumers of the feed and the public in general and avoids the unnecessary expense and the unsavory reputation incident to prosecution for violation.

The following summary of the Texas Feed Law is given for the information of those who are not thoroughly familiar with its provisions:

**SUMMARY OF THE TEXAS FEED LAW**

1. (a) Feeding stuffs covered by the law:
   All materials offered or exposed for sale, distributed or sold for feeding purposes except those especially excluded.

   (b) Feeding stuffs not covered by the law:
   Hay and straw; whole seeds or grains of wheat, barley, rye, oats, Indian corn, rice, buckwheat or broom corn; any other whole or unground grains or seeds.

2. Statements to be printed on official tags securely attached to bags:
   (a) Net weight of package.
   (b) Name of feeding stuff.
   (c) Name and address of manufacturer or importer.
   (d) Place of manufacture.
   (e) Minimum percentage of crude protein.
   (f) Minimum percentage of crude fat.
   (g) Minimum percentage of nitrogen-free extract.
   (h) Maximum percentage of crude fiber.
   (i) Names of ingredients (if a mixed feed).
   (j) Percentage of each ingredient when rice hulls, peanut hulls, corn cobs, oat hulls, cottonseed hulls, or similar substances are present in a mixed feed.

A copy of the Texas Feed Law will be sent to interested persons on request.

**RULINGS UNDER THE LAW**

The law provides that the Director of the Texas Agricultural Experiment Station shall be empowered to prescribe and enforce such rules and regulations as he may deem necessary to carry into effect the intent and meaning of the feed law. In accordance with this provision, rules and regulations have been promulgated and printed in Control Circular E of the Experiment Station, a copy of which will be gladly furnished upon request. The Division of Feed
Control Service recommends that the official tags be sewed on the bags through the eyelets and the use of metal dead-lock fasteners be avoided, on account of possible damage to men and animals.

REFUNDS

The Texas Feed Law makes no provision for the payment of refunds to cover deficiencies and although this practice often shows the good intention of the manufacturer, the payment of such refunds will have no bearing on any subsequent action which may be taken in case of violation of the law. The law does not contemplate that the purchaser of a feeding stuff should be required to have an analysis made in order to secure protection. When refunds are paid, dealers will be required to prorate them to the purchasers so that the consumers may receive their benefit. The payment of refunds never fully remunerates the consumer for being furnished feed which is deficient in valuable nutrients, and manufacturers are advised to be certain in advance that shipments are up to the guarantee in every respect.

It is sometimes necessary to know how to calculate the refund due on account of deficiency in protein in cottonseed meal. To find the refund which is due the purchaser, divide the cost per ton by the number showing the percentage of protein guaranteed. This gives the cost per ton of 1 per cent of protein. Multiply this result by the number of per cent deficient. Finally, multiply this result by the number of tons purchased, which will give the total amount of refund due. Example: If a shipment containing thirty tons of cottonseed meal costing $40 per ton is purchased under a guarantee of 43% protein, and is found to contain but 38% protein, how much refund is due?

\[
\text{Cost per ton of 1 per cent protein} = \frac{40}{43} = \$0.93 \\
\text{Number of per cent deficient} = 43 - 38 = 5 \\
\text{Cost of ton of 5 per cent protein} = \$0.93 \times 5 = \$4.65 \\
\text{Total amount of refund due} = \$4.65 \times 30 = \$139.50
\]

This method of calculating refunds applies only to cottonseed meals and peanut meals, which are sold on a protein basis, but it does not apply to other feeds.

CONTROL OF INTERSTATE SHIPMENTS

In enforcing the law the State has the co-operation and assistance of the United States Department of Agriculture as regards adulterated and misbranded interstate shipments. On March 9, 1912, the Director of the Texas Agricultural Experiment Station received a commission from the United States Department of Agriculture to collect samples of interstate shipments of feed and practically all such shipments showing a deficiency and adulteration are sampled not only under the Texas Feed Law but also under the Federal Food and Drugs Act of 1906. The Federal samples are analyzed under the direction of Dr. G. S. Fraps, Collaborating Chemist, and duplicate portions of the samples are forwarded to the Bureau of Chemistry Laboratory at New Orleans, St. Louis or Washington. The Federal government prosecutes many of the manufacturers of these feeds,
but this does not preclude action by the Texas Feed Control Service if considered necessary for the protection of Texas consumers.

The Division of Feed Control Service during the year 1924-25 continued its cooperation with the Federal government. By means of this cooperation, the Division is in position to control interstate shipments of feed and protect the Texas purchaser who buys feeding stuffs manufactured in other States.

**SHIPMENTS WITHDRAWN FROM SALE**

All dealers are advised to withdraw from sale shipments of feed which they know do not conform to the requirements of the Texas feed law, until such time when they can be legally sold. The dealer is directly responsible if feed in his possession fails to meet the requirements of the law and the same penalty attaches to exposing or offering for sale any unlabeled feed as for selling the same. The dealer should always be a law-abiding citizen and voluntarily withdraw from sale all untagged shipments and those which he knows or suspects are adulterated or misbranded and then write to the Division of Feed Control Service for instructions and its cooperation.

The following table shows the summary of the feeds withdrawn from sale during the year ended August 31, 1925, and gives the number of shipments withdrawn, the amounts, and the special reason for their withdrawal from sale. It also shows the number of manufacturers represented.

Untagged shipments were properly labeled with tags furnished by the manufacturers. Improperly labeled shipments were relabeled with official tags properly printed, or with tags showing guarantees that could be maintained and, in still other cases, shipments were returned to the manufacturer. The sales of goods below guarantees were, in practically all instances, adjusted by manufacturers paying refunds to dealers and consumers when the deficiencies were sufficient to warrant such action. In all cases when refunds were made to dealers, the dealers were advised to prorate the same among their customers, so far as possible, so that the ultimate consumer would receive its benefit.

Attention is directed to special information on page 26 regarding refunds.

RESULTS OF ANALYSES

Table No. 5 contains a detailed report of the results obtained in the inspection of feeds during the season of 1924-25. In this table will be found the analyses of all the official inspection samples together with the analyses of many samples representing brands of feed registered during the year ended August 31, 1925. Consumers and agents are advised to carefully study this table and purchase from and represent companies which ship feed labeled according to law and who maintain their guarantees in every respect.

The footnotes at the bottom of the pages refer to matters of importance in connection with the feeds designated, and we advise that they be carefully considered.

SUMMARY

This bulletin contains a report of the inspection of Commercial Feeding Stuffs sold in the State of Texas in 1924-25.

In addition to definitions of terms used in reporting analyses of feeding stuffs there is a table showing the average composition of the feeds sold during the year and also one showing the digestible protein and productive energy of feeds as calculated by the method described in Bulletin No. 329.

There is a discussion on fiber standards for shorts and also tentative chemical standards for special-purpose mixed feeds.

Advice to purchasers of feed is given which should be carefully followed.

This bulletin also contains definitions for various by-product feeds and chemical standards as adopted.

A table is given showing tentative guarantees for the convenience of manufacturers in registering feeding stuffs for sale in Texas.

The purpose of the Texas Feed Law is explained and a summary of the law is given.

Table No. 4 shows the shipments withdrawn from sale and the reason for taking this action.

Table No. 5 contains a detailed report of the results obtained in the inspection of feeds during the season of 1924-25.
