DIVISION OF FEED CONTROL SERVICE

COMMERCIAL FEEDING STUFFS

FROM SEPTEMBER 1, 1934 TO AUGUST 31, 1935

AGRICULTURAL AND MECHANICAL COLLEGE OF TEXAS
T. O. WALTON, President

[Page Blank in Bulletin]

This Bulletin is the thirtieth annual report on the inspection of feeding stuffs sold in the State of Texas under the provisions of the Texas Feed Law. During the year ended August 31, 1935, 3,080 samples were submitted to chemical analysis and microscopical examination, 2,925 of which were secured by inspectors. In addition, eleven samples of registered brands of vitamin D carriers were assayed for antirachitic potency.

In this Bulletin are found the analysis of each sample and a detailed report of the results obtained in the inspection of feeding stuffs from September 1, 1934 to August 31, 1935.

The average composition, digestible protein, and productive energy of many feeding stuffs analyzed are shown in a table. A table is given showing the average protein content of the cottonseed products made by each oil mill, so that the reader can see which mills maintained the guaranties on the average. Computed from the sale of tax tags, there were 1,298,743 tons of feed sold in the State during the fiscal year covered by this report. This amount represents only the tonnage of feeding stuffs regulated by the Texas Feed Law and does not include whole grains.

Chemical standards for various by-product feeds and special-purpose mixed feeds are shown, and definitions of and standards for commercial unmixed feeds are given, together with additional information on the requirements of the Texas Feed Law and the composition of feeding stuffs.

**COMMERCIAL FEEDING STUFFS, SEPTEMBER 1, 1934
TO AUGUST 31, 1935*†**

F. D. FULLER, CHIEF, AND JAMES SULLIVAN, ASST. CHIEF,
DIVISION OF FEED CONTROL SERVICE

This Bulletin is a report on the work performed by the Texas Agricultural Experiment Station in the inspection of feeding stuffs sold in Texas during the year ended August 31, 1935. It includes additional information on the requirements of the Texas Feed Law and the composition of feeding stuffs.

DEFINITIONS OF TERMS

Protein includes all the nitrogenous compounds of a feed, regardless of their nature and is equal to the nitrogen present multiplied by 6.25. The animal uses protein to restore the waste of tissues and muscles, and to form flesh. Protein may also be oxidized in the body to produce heat, or it may serve as a source of fat in case of a deficiency in carbohydrates and fat, accompanied by an excess of protein. It is, however, a costly source of heat and fat.

Protein enters very largely into the composition of the whites of eggs, lean meat, curd of milk, gelatin, etc. It is used for the building and repair of body tissue, for new growth, in the production of milk or eggs and, therefore, is a necessary ingredient for the feeder to purchase. It is an important nutrient in feeding stuffs and usually is the most expensive to purchase. With a given feeding stuff, the more protein it contains the better its quality, compared with other feeding stuffs of the same class. It is incorrect, however, to compare the value of feeding stuffs of different kinds on a protein basis alone. For example, a cottonseed meal containing 45 per cent of crude protein does not have five times the value of corn chop containing 9 per cent of crude protein. There are other constituents of both feeds, such as fats, starches, and sugars, which are of great value to animals. Corn chop contains more carbohydrates than does cottonseed meal.

Fat is composed of substances which are extracted from the dry feeding stuffs by ether, and consists chiefly of fats and oils in the case of most feeding stuffs, but in the case of fodders and hays it is composed to a great extent of waxes, chlorophyll, and other substances in addition to fat. A pound of digestible fat is equal to 2.25 pounds of digestible carbohydrates in producing heat and energy. Fat is used in the animal body as a source of body fat, to furnish heat to keep the body warm, to furnish energy to run the animal mechanism and to produce work. All involuntary muscular movements require energy, which is furnished by the oxidation of fats, carbohydrates, or protein.

*The chemical analyses reported in this Bulletin were made under the direction of Dr. G. S. Fraps, Chief, Division of Chemistry, by S. E. Asbury, Jeanne F. DeMottier, W. H. Garman, Velma Graham, C. D. Marrs, and T. L. Ogier, and the microscopical examinations were made by Mrs. DeMottier.

†Manuscript submitted for publication on September 19, 1935.

Fiber is found in hays, straw, and similar material. It occurs in the cell walls and in the fibrous or woody parts of plants. It is the least digestible portion of a feed. By means of fermentation in the intestines fiber is digested to some extent by animals that chew the cud. The operation, however, consumes so much energy that a large proportion of the value of the fiber is taken up by the process of digestion. Ordinarily a feeding stuff having a high content of crude fiber is classed as a low-grade feed for the reason that such a feed usually is low in digestible protein and productive energy. Cottonseed hulls, oat hulls, peanut hulls, rice hulls, corn cobs, and materials of a similar nature contain high percentages of crude fiber. If sufficient bulky materials are available, such as hays, fodders, or grass, it is unwise for the feeder to expend money for the purchase of commercial feeding stuff containing large amounts of crude fiber, a constituent that is digested with difficulty.

If the crude fiber in cottonseed meal exceeds certain limits, it indicates that the feed is adulterated with cottonseed hulls. In a similar way, crude fiber in excess of a given standard indicates the presence of corn cobs or corn bran in corn chop, rice hulls in rice bran, etc.

Nitrogen-free Extract includes starches, sugars, gums, and other bodies of a similar nature. These, together with the fat, are oxidized to maintain the animal heat and to furnish energy for the production of work. The nitrogen-free extract of most feeding stuffs of a concentrated nature is composed largely of sugars and starches, which are readily digested.

Moisture is present in all feeding stuffs. The material may seem to be dry, but, nevertheless, it contains an appreciable amount of water. An excess of water may cause the feed to heat or spoil, if stored under such conditions that the feed cannot dry out quickly enough.

Ash is the residue from a feeding stuff that has been burned. It represents mostly that portion of the plant which comes from the soil. The ash consists chiefly of lime, magnesia, soda, and potash combined with chlorine and carbonic, sulphuric, or phosphoric acid. Constituents of ash are necessary to the animal inasmuch as they are used for the formation of bone, for constituents of the blood, and for other purposes. If the various necessary constituents of the ash are not present in sufficient quantity, the animal may not grow or produce as well as it should, or it may suffer from various diseases. Sometimes it is necessary to supplement the ash naturally present in feeds with additional amounts. Lime and phosphoric acid are the constituents most often deficient. An excessive amount of ash in a feed may indicate adulteration with dirt, sand, or other mineral matter.

AVERAGE COMPOSITION OF FEEDING STUFFS ANALYZED

Table 1 shows the average composition of many feeding stuffs analyzed during the past year. The analyses of mixed and of proprietary feeds are not included in this table.

Table 1. Average Composition of Feeding Stuffs Analyzed During the Year 1934-1935

DIGESTIBLE PROTEIN AND PRODUCTIVE ENERGY OF FEEDS

The digestible protein represents that portion of the feed which can be used for the repair or formation of flesh or nitrogenous body constituents or for the formation of nitrogenous materials in milk or eggs. The productive energy represents that portion of the feed which is available for the purpose of furnishing heat to the animal or energy for life processes and work; it also furnishes material for the production of the constituents of milk, eggs, or fat. The productive energy represents the net value of the feed for energy after all losses involved in digestion and assimilation have been allowed for. The digestible protein and productive energy, therefore, are the two best indicators of the productive value of a feed.

Table 2. Digestible Protein and Productive Energy of Feeds Calculated from Average Analyses Shown in Table 1*

Name of Feed	Number Averaged	Digestible Protein, Per Cent,	Productive Energy, Therms in 100 lbs.
Alfalfa Leaf Meal	8	14.99	46.33
Alfalfa Meal	30	11.34	42.28
Alfalfa Stem Meal	5	9.07	37.08

Wheat Mixed Feed and Screenings.....	9	15.24	61.46
Wheat Red Dog.....	1	14.32	81.23

The digestible protein and productive energy of feeds of the average composition shown in Table 1 are given in Table 2. The method of obtaining these figures is described fully in Bulletins Nos. 329, 372, 402, 436, and 461 of this Station.

ESTIMATED TONNAGE OF FEEDING STUFFS SOLD IN TEXAS, 1906-1935

Table 3 shows the estimated tonnage of feed sold in Texas yearly during the past twenty-nine years as computed from the sale of tax tags, assuming that all the tags sold during the period covered by this report are used for feeds sold during that period. It is impossible to give complete data on the number of tons of the various classes of feeds sold for consumption in Texas, owing to the fact that some manufacturers purchase blank tax tags and print on the tags, at their places of business, the information required by the Texas Feed Law. In connection with this table, attention should be called to the fact that the figures given represent only the tonnage of commercial feeding stuffs regulated by the Texas Feed Law and do not include whole grains.

Table 3. Estimated Tonnage of Feeding Stuffs Sold in Texas, 1906-1935

VITAMIN D SUPPLEMENTS FOR POULTRY

At the present time units of measurement of vitamin D activity are based primarily on experiments with rats. Therefore, nearly all statements and claims relating to vitamin D potency have been predicated

on the assumption that measurement of activity determined by rat feeding experiments could be successfully applied to poultry feeding. Recent work, however, has shown that growing chickens do not receive the same benefits from certain substances which may prove adequate for rats and human beings. It seems reasonable, therefore, to require specific guaranties for poultry, on all vitamin D carriers intended for consumption by fowls. In the proceedings of the annual meeting of the Association of American Feed Control Officials held in November, 1933, a resolution was adopted which requires minimum guaranties of anti-rachitic potency on materials sold primarily as vitamin D supplements for poultry. To conform to this resolution, this Division has adopted a regulation for vitamin D carriers sold in Texas, which requires the following statement on the registration and label:

"Antirachitic potency: guaranteed complete protection for poultry at _____% by the Association of Official Agricultural Chemists' Method."

During the past year several brands of vitamin D carriers have been registered for sale in Texas and Table 4 shows the results obtained in the biological assays of samples furnished by the manufacturers at time of registration. Each brand registered carried a specific guaranty of vitamin D potency at a certain percentage level and the product was assayed at the guaranteed percentage. The results obtained in the assay of these registration samples were not altogether satisfactory. Some objections have been raised to the method adopted for stating the antirachitic potency. Some users of vitamin D supplements are of the opinion that the guaranties of potency are recommendations of the quantity to be used in feed, whereas these guaranties are only statements of the relative values of the supplements under definite conditions of the assay, and the adoption of a guaranty of antirachitic potency based on international units would eliminate much of the confusion that now exists. Therefore, for practical feeding purposes the recommendations of the manufacturer should be followed. There are still some brands on the market in Texas which are not registered and the vitamin D potency guaranteed, as progress in meeting the new labeling requirements is rather slow.

Official samples of vitamin D carriers will be secured in the open markets of the State and the results of assays will appear in future reports of inspection.

Table 4. Assay of Vitamin D Supplements

Name and Address of Manufacturer or Importer. Brand Name.	Guaranteed Complete Protection Against Rickets at Following Level:	Did Sample Conform to Guaranty?	Registration No.
	Per Cent of Test Ration		
Booth Company, Inc., F. E., San Francisco, California. Crescent Brand Sardilene.....	$\frac{1}{4}$	No	191A

MIXED FEEDS CONTAINING LOW-GRADE ROUGHAGE

In table 9 will be found the analyses of many mixed feeds containing low-grade roughage such as oat hulls, straw, rice hulls, peanut hulls, dried sugar cane pith, and similar materials of little or no feeding value, having guaranties of crude fiber more than 10 per cent. Such feeds should be purchased only in emergencies as the selling prices are usually considerably higher than their commercial values calculated from their contents of digestible protein and productive energy. Most of these feeds would be classed as bulky feeds, and when the value of bulk is taken into consideration in addition to the digestible protein and productive energy, the calculated values approach more nearly to the actual retail prices.

This subject is fully discussed in Control Circular G of this Station, a copy of which will be furnished on request.

SUGGESTIONS TO PURCHASERS OF FEED

Examine Official Tags.—In purchasing feeding stuffs, always carefully examine the official tags attached and purchase on the official guaranty and actual analysis as indicated in the reports of the Division of Feed Control Service, and disregard statements of salesmen or in advertising matter, if they differ from the official tags.

Goods Not as Represented.—In case any purchaser receives goods which he thinks are not as represented, he may write to the Division of Feed Control Service, giving full details of the matter, stating the quantity on hand and his reasons for suspecting that the feed is not as represented. The Division will investigate the matter carefully and either send an inspector, if conditions justify so doing, or else send instructions for taking a sample of the feed for further examination.

Freight Bills, Invoices, Etc.—It is important that purchasers of feed in car lots should always have available for use of the inspector the following information: the total number of tons in the shipment; number and initials of car in which shipment is received; number and date of waybill; name of railroad issuing waybill; name of town from which shipment was made; name of firm from which feed was purchased; date of original waybill; date shipment was received, and price per ton. This information is especially valuable to the Service in all cases involving the shipment of feed from other States, as it will assist in proving the sale and protecting Texas purchasers under the Federal Law.

Official Tag.—Do not accept any feeding stuff unless Texas tax tags are attached to the sacks, and purchase only those brands which are manufactured by companies whose record of inspection shows that their guaranties are maintained.

DEFINITIONS AND STANDARDS ADOPTED

The Director of the Texas Agricultural Experiment Station is empowered to adopt standards for and definitions of feeding stuffs; therefore, the registration of any feeding stuff may be refused if it does not conform to the standard and definition or if application is made under a name which is misleading as to materials of which it is composed. Registrations continue in force until revision or re-registration may be required, unless canceled for cause. The following will be considered as sufficient reasons for the cancelation of any registration, after ten days' notice: 'if a feeding stuff is registered and then discovered to be in violation of the standards and definitions adopted; the use of a brand name that is found to be misleading in any respect; the use of a feed ingredient that is found to be injurious; the incorrect labeling of a feed with regard to any ingredient; misbranding or adulteration; notice from the manufacturer that the sale of any given brand has been discontinued, and notice from the manufacturer that he has ceased to do business in Texas.

Table 5 shows the chemical standards now in effect in Texas. If a manufacturer is uncertain as to how a certain brand of feed should be registered, it will be advisable for him to communicate with the Division of Feed Control Service before making application for registration.

Table 5. Chemical Standards

Name of Feed	Minimum Protein, Per Cent	Minimum Fat, Per Cent	Maximum Fiber, Per Cent
Chopped Alfalfa	13.00	1.50	33.00
Alfalfa Leaf Meal			18.00

Wheat Low-Grade Feed Flour			1.50
Wheat Mixed Feed	15.00	3.50	8.50
Wheat Red Dog			4.00
Wheat White Shorts	14.50	3.00	3.50
Dairy or Dairy Cow Feed	15.00	3.00	16.00
Hog Feed	14.00	3.50	7.00
Horse and Mule Feed	9.00	2.00	15.00
Laying Mash*	18.00	3.50	8.00

*Twenty per cent of the total protein content must be of animal origin.

Special-Purpose Mixed Feeds

Standards for special-purpose mixed feeds, the last four in Table 5, have also been adopted by the South Central States Association of Food, Feed, Drug and Health Officials.

DEFINITIONS OF AND STANDARDS FOR COMMERCIAL UNMIXED FEEDS

Many of the definitions adopted by the Association of American Feed Control Officials are followed closely and the names and standards are required to be in conformity with these definitions. In addition to these

definitions, the following, some of which apply especially to Texas conditions, include standards and definitions formulated by the Division of Feed Control Service from the most reliable data available.

Alfalfa Products

Alfalfa Meal is the product obtained from the grinding of the entire alfalfa hay, without the addition of any alfalfa stems, alfalfa straw, or foreign material, or the abstraction of leaves. It must be reasonably free from other crop plants and weeds. (Adopted 1928). Standard: It must contain not less than 13 per cent of crude protein and 1.5 per cent of crude fat, and not more than 33 per cent of crude fiber.

Chopped Alfalfa is the entire alfalfa hay, chopped and not ground finely enough to become a meal. It must not contain an admixture of alfalfa straw or other foreign material. (Adopted prior to 1928). Standard: It must contain not less than 13 per cent of crude protein and 1.5 per cent of crude fat, and not more than 33 per cent of crude fiber.

Alfalfa Leaf Meal is the ground product consisting chiefly of leafy materials separated from alfalfa hay. It must be reasonably free from other crop plants and weeds, and must not contain more than 18 per cent of crude fiber. (Adopted 1928).

Alfalfa Stem Meal is the ground product remaining after the separation of the leafy material from alfalfa hay or meal. It must be reasonably free from other crop plants and weeds. (Adopted 1928).

Animal Products

Blood Meal is ground, dried blood. (Adopted 1926).

Blood Flour is dried blood, prepared by special processes and reduced to a fine powder. (Adopted prior to 1928).

Digester Tankage, Meat Meal Tankage, or Feeding Tankage is the residue from animal tissues exclusive of hoof, horn, manure, and stomach contents, except in such traces as might occur unavoidably in good factory practice, especially prepared for feeding purposes by tanking under live steam or by dry-rendering or a mixture of the products made suitable by drying and grinding. It must not contain more than 10% of phosphoric acid (expressed as P_2O_5). If it bears a name descriptive of its kind, composition, or origin, the material must correspond thereto. (Adopted 1928—Amended 1933).

Digester Tankage with Bone, Meat and Bone Meal Digester Tankage, Meat and Bone Meal Tankage, or Feeding Tankage with Bone is the residue from animal tissues exclusive of hoof, horn, manure, and stomach contents, except in such traces as might occur unavoidably in good factory practice, especially prepared for feeding purposes by tanking under live steam or by dry rendering or a mixture of the products made suitable by drying and grinding, and containing more than 10% of phos-

phoric acid (expressed as P_2O_5). If it bears a name descriptive of its kind, composition, or origin, it must correspond thereto. (Adopted 1928—Amended 1933).

Meat Scraps is the ground, dry-rendered residue from animal tissues exclusive of hoof, horn, manure, and stomach contents, except in such traces as might occur unavoidably in good factory practice. When this product contains more than 10 per cent of phosphoric acid (expressed as P_2O_5), it shall be designated Meat and Bone Scraps. If it bears a name descriptive of its kind, composition or origin it must correspond thereto. (Adopted 1928.)

Raw Bone Meal is the dried, ground product suitable for animal feeding, obtained by cooking in water at atmospheric pressure undecomposed bones, just enough to remove excess fat and meat. It must not contain less than 23 per cent of protein. (Adopted 1929).

Steamed Bone Meal is the dried, ground product suitable for animal feeding obtained by cooking bones with steam under pressure. (Adopted 1929).

Special Steamed Bone Meal is the dried, ground product suitable for animal feeding, obtained by cooking dried bone after the removal of grease and meat fiber with steam under pressure in the process of obtaining gelatine or glue. (Adopted 1929).

Barley Products

Barley Mixed Feed is the entire offal from the milling of barley flour from clean barley, and is composed of barley hulls and barley middlings. (Adopted prior to 1928).

Barley Hulls is the product consisting of the outer coverings of the barley. (Adopted prior to 1928).

Barley Feed is the entire by-product resulting from the manufacture of pearl barley from clean barley. (Adopted prior to 1928).

Ground Barley is the entire product obtained by grinding clean, sound barley, containing not less than 90 per cent of pure barley and not more than 10 per cent of other grains, weed seeds, and other foreign material, and not more than 6 per cent of fiber, provided that no portion of this stated 10 per cent of other grains, weed seeds, or other foreign material shall be intentionally added. (Adopted prior to 1928).

Mixed Feed Barley is the entire product obtained by grinding country-run barley containing not less than 75 per cent of pure barley and not more than 25 per cent of other grains, weed seeds, and other foreign material; provided that no portion of this stated 25 per cent of other grains, weed seeds, or foreign material shall be intentionally added. The ingredients must be stated as barley, other grains, weed seeds, and other foreign material. (Adopted prior to 1928).

Brewers' and Distillers' Products

Brewers' Dried Grains is the dried residue obtained in the manufacture of beer. (Adopted prior to 1928).

Distillers' Corn Dried Grains or **Distillers' Rye Dried Grains** is the dried residue obtained in the manufacture of alcohol and distilled liquors. The product must bear the designation indicating the cereal predominating. (Adopted prior to 1928).

Distillers' Corn Solubles is a by-product from the manufacture of alcohol from corn solids obtained by the evaporation of the mash liquor after the removal of the alcohol and wet grains. (Adopted prior to 1928).

Distillers' Rye Solubles is a by-product from the manufacture of alcohol from rye solids obtained by the evaporation of mash liquor after the removal of the alcohol and wet grains. (Adopted prior to 1928).

Distillers' Corn and Rye Solubles is a by-product from the manufacture of alcohol from corn and rye solids obtained by the evaporation of mash liquor after the removal of the alcohol and wet grains. (Adopted prior to 1928).

Malt Sprouts are the sprouts of the barley grain obtained from malted barley. Sprouts derived from any other malted cereal must be designated by the name of that cereal. (Adopted prior to 1928).

Yeast Dried Grains or **Vinegar Dried Grains** is the properly dried residue from the mixture of cereals, malt, and malt sprouts (sometimes cottonseed meal), obtained in the manufacture of yeast or vinegar, and consists of corn or corn and rye, from which most of the starch has been extracted, together with malt added during the manufacturing process to change the starch to sugars, and malt sprouts (sometimes cottonseed meal) added during the manufacturing process to aid in filtering the residue from the wort and to serve as a source of food supply for the yeast. (Adopted prior to 1928).

Corn Products

Corn Meal (Feeding) is finely ground, unbolted corn. (Adopted prior to 1928).

Corn Bran is the outer coating of the corn kernel, with little or none of the starchy part or germ. (Adopted 1931). Standard: It must contain not less than 8 per cent of crude protein and 5 per cent of crude fat, and not more than 12 per cent of crude fiber.

Corn Feed Meal is the fine siftings obtained in the manufacture of screened corn chop, screened ground corn, or screened cracked corn, with or without its aspiration products added. (Adopted 1931). Standard: It must contain not less than 8 per cent of crude protein and 3 per cent of crude fat, and not more than 3 per cent of crude fiber.

Corn Chop, Ground Corn, or Cracked Corn is the entire product made by grinding, cutting, or chopping the grains of sound Indian corn, and may be fine, medium, or coarse, and must not contain more than 4 per cent of foreign material. (Adopted 1931). Standard: It must contain not less than 9 per cent of crude protein and 3.5 per cent of crude fat, and not more than 3 per cent of crude fiber.

Screened Corn Chop, Screened Ground Corn, or Screened Cracked Corn is the coarse portion of corn chop, ground corn or cracked corn from which most of the fine particles have been removed, and must not contain more than 4 per cent of foreign material. (Adopted 1931).

Corn Grits, or Hominy Grits is the product consisting of the fine or medium-sized, hard flinty portions of sound Indian corn containing little or none of the bran or germ. (Adopted 1931).

Ear Corn Chop is corn and cob chopped, without the husk, with no greater proportion of cob than occurs in the ear corn in its natural state. (Adopted prior to 1928). Standard: It must contain not less than 8.20 per cent of crude protein and 3.20 per cent of crude fat, and not more than 8 per cent of crude fiber.

Corn Gluten Meal is that part of commercial shelled corn that remains after the separation of the larger part of the starch, the germ, and the bran, by the processes employed in the manufacture of cornstarch. It may or may not contain corn solubles. (Adopted prior to 1928).

Corn Gluten Feed is that part of commercial shelled corn that remains after the separation of the larger part of the starch and the germs by the processes employed in the manufacture of cornstarch. It may or may not contain corn solubles. (Adopted prior to 1928).

Maltose Process Corn Gluten Feed is the dried residue from degermed corn, after removal of starch in the manufacture of malt syrup. (Adopted prior to 1928).

Hominy Feed, Hominy Meal, or Hominy Chop is the kiln-dried mixture of the mill-run bran coating, the mill-run germ, with or without a partial extraction of the oil, and a part of the starchy portion of the white corn kernel obtained in the manufacture of hominy, hominy grits, and corn meal by the degerming process. (Adopted prior to 1928). Standard: It must contain not less than 10 per cent of crude protein and 6 per cent of crude fat, and not more than 7 per cent of crude fiber.

Yellow Hominy Feed, Yellow Hominy Meal, or Yellow Hominy Chop is a kiln-dried mixture of the mill-run bran coating, the mill-run germ, with or without a partial extraction of the oil, and a part of the starchy portion of the yellow corn kernel obtained in the manufacture of yellow hominy grits and yellow corn meal by the degerming process. (Adopted prior to 1928). Standard: It must contain not less than 10 per cent of crude protein and 6 per cent of crude fat, and not more than 7 per cent of crude fiber.

Corn Oil Cake consists of the corn germ from which part of the oil has been pressed and is the product obtained in the wet-milling process of manufacture of cornstarch, corn syrup, and other corn products. (Adopted prior to 1928).

Corn Oil Meal is ground corn oil cake. (Adopted prior to 1928).

Corn Germ Cake consists of corn germ with other parts of the corn kernel from which part of the oil has been pressed, and is the product obtained in the dry-milling process of manufacture of corn meal, corn grits, hominy feed, and other corn products. (Adopted prior to 1928).

Corn Germ Meal is ground corn germ cake. (Adopted prior to 1928).

Corn Screenings is the product consisting of the small light grains of corn, parts of grains of corn and/or other cereals, and other materials having feeding value, obtained by screening shelled corn, excluding sand, dirt, and other similar inert materials. (Adopted 1931).

Cottonseed Products*

The percentage of cottonseed hulls contained in cottonseed feed must be shown on the tags in order that this product may not be considered adulterated.

48 Per Cent Protein Cottonseed Meal, Prime Quality, must be reasonably bright in color, not brown or reddish, sweet in odor, and free from excess of lint. Standard: It must contain not less than 48 per cent of crude protein and not less than 55 per cent of crude protein and crude fat combined, and not more than 9 per cent of crude fiber.

45 Per Cent Protein Cottonseed Meal, Prime Quality, must be reasonably bright in color, not brown or reddish, sweet in odor, and free from excess of lint. Standard: It must contain not less than 45 per cent of crude protein, and not less than 51 per cent of crude protein and crude fat combined, and not more than 10 per cent of crude fiber.

43 Per Cent Protein Cottonseed Meal, Prime Quality, must be reasonably bright in color, not brown or reddish, sweet in odor, and free from excess of lint. Standard: It must contain not less than 43 per cent of crude protein and not less than 49 per cent of crude protein and crude fat combined, and not more than 12 per cent of crude fiber.

Cottonseed Meal, Off Quality. Cottonseed meal not fulfilling the above requirements as to color, odor, or texture shall be branded "Off Quality," that is, "43 Per Cent Protein Cottonseed Meal, Off Quality." Higher grades shall be similarly designated.

Cottonseed Cake shall correspond to cottonseed meal as to composition and as to standards and classifications.

41.12 Per Cent Protein Ground Cottonseed Feed must be reasonably bright in color, sweet in odor, and must contain not more than 5 per cent

*Definitions not adopted by the Association of American Feed Control Officials.

of delinted cottonseed hulls. Standard: It must contain not less than 41.12 per cent of crude protein and not less than 46.12 per cent of crude protein and crude fat combined, and not more than 14 per cent of crude fiber.

38.56 Per Cent Protein Ground Cottonseed Feed must be reasonably bright in color, sweet in odor, and must contain not more than 12 per cent of delinted cottonseed hulls. Standard: It must contain not less than 38.56 per cent of crude protein and not less than 43.56 per cent of crude protein and crude fat combined, and not more than 18 per cent of crude fiber.

36 Per Cent Protein Ground Cottonseed Feed must be reasonably bright in color, sweet in odor, and must contain not more than 17.50 per cent of delinted cottonseed hulls. Standard: It must contain not less than 36 per cent of crude protein and not less than 41 per cent of crude protein and crude fat combined, and not more than 22 per cent of crude fiber.

Cracked Cottonseed Feed shall correspond to ground cottonseed feed as to composition and as to standards and classifications.

28 Per Cent Protein Whole-Pressed Cottonseed, Prime Quality, is the product resulting from subjecting the whole, sound, mature, clean, undecorticated cottonseed to pressure for the extraction of oil, and includes the entire cottonseed, less the oil extracted and the lint removed. Standard: It must contain not less than 28 per cent of crude protein.

25 Per Cent Protein Whole-Pressed Cottonseed, Prime Quality, is the product resulting from subjecting the whole, sound, mature, clean, undecorticated cottonseed to pressure for the extraction of oil, and includes the entire cottonseed, less the oil extracted and the lint removed. Standard: It must contain not less than 25 per cent of crude protein.

Ground Whole-Pressed Cottonseed is whole-pressed cottonseed, ground. It must correspond to whole-pressed cottonseed as to composition and as to standards and classifications.

Feterita Products

Feterita Chop consists of the entire grain removed from the head and chopped. Standard: It must contain not less than 11 per cent of protein, 2.8 per cent of fat, and not more than 3 per cent of crude fiber.

Feterita Head Chop consists of the entire head, chopped. Standard: It must contain not less than 10 per cent of protein, 2.50 per cent of fat, and not more than 8 per cent of crude fiber.

Feterita Head Stems consists of the head of feterita from which the grain has been removed.

Kafir Products

Kafir Chop consists of the entire grain removed from the head and chopped. Standard: It must contain not less than 10 per cent of protein 2.50 per cent of fat, and not more than 3 per cent of crude fiber.

Kafir Head Chop consists of the entire head, chopped. Standard: It must contain not less than 8.50 per cent of protein, 2.50 per cent of fat, and not more than 8 per cent of crude fiber.

Kafir Head Stems consists of the head of kafir from which the grain has been removed.

Linseed and Flax Products

--- **Per Cent Protein Linseed Cake or Linseed Meal** is the product obtained in the removal of the oil from flaxseed; provided that the final product contains less than 6 per cent of weed seeds and other foreign materials; and provided, further, that no portion of the stated 6 per cent of weed seeds and other foreign materials shall be deliberately added. It shall not contain more than 0.5 per cent of acid insoluble ash. (Adopted 1933).

--- **Per Cent Protein Old Process Oil Meal or --- Per Cent Protein Old Process Linseed Meal** is oil meal as defined below, produced by crushing, cooking and hydraulic pressure. (Adopted prior to 1928).

--- **Per Cent Protein New Process Oil Meal or --- Per Cent Protein New Process Linseed Meal** is oil meal as defined below, produced by crushing, heating and the use of solvents. (Adopted prior to 1928).

Flax Plant By-Product is that portion of the flax plant remaining after the separation of the seed, the bast fiber, and a portion of the shives, and consists of flax shives, flax pods, broken and immature flax seeds, and the cortical tissues of the stem. (Adopted prior to 1928).

Ground Flaxseed or Flaxseed Meal is the product obtained by grinding flaxseed which has been screened and cleaned of weed seeds and other foreign materials by the most improved commercial process; the final product must contain less than 4 per cent of weed seeds and other foreign materials, and no portion of the stated 4 per cent of weed seeds and other foreign materials shall be intentionally added. (Adopted prior to 1928).

Unscreened Flaxseed Oil Feed Cake is the product obtained by extraction of part of the oil from unscreened flaxseed by crushing, cooking, and hydraulic pressure, or by crushing, heating, and the use of solvents. The ingredients must be stated as "partially extracted flaxseed and foreign seeds (wheat, wild buckwheat, pigeon grass, wild mustard, etc.)." (Adopted prior to 1928).

Ground Unscreened Flaxseed Oil Feed is the ground unscreened flaxseed oil feed cake. (Adopted prior to 1928).

Screenings Oil Feed is the ground product obtained after extraction of part of the oil by crushing, cooking, and hydraulic pressure, or by crushing, heating, and the use of solvents from the smaller imperfect flaxseed, weed seeds, and other foreign materials having feeding value, separated in cleaning flaxseed. The name of the grain from which the

screenings are separated must be prefixed to "screenings oil feed." (Adopted prior to 1928).

--- **Per Cent Protein Oil Cake** is the product obtained after the extraction of part of the oil by crushing, cooking, and hydraulic pressure, or by crushing, heating, and the use of solvents, from flaxseed which have been screened and cleaned of weed seeds and other foreign materials by the most improved commercial process. When used alone the term "Oil Cake" shall be understood to designate linseed cake as defined. When used to cover any other product the name of the seed from which it is obtained must be prefixed to the words "Oil Cake." (Adopted prior to 1928).

--- **Per Cent Protein Oil Meal** or --- **Per Cent Protein Ground Oil Cake** is oil cake ground to a meal. (Adopted prior to 1928).

Marine Products

Fish Meal (Feeding) is clean, dried, ground tissues of undecomposed whole fish and/or fish cuttings with or without the extraction of part of the oil, and contains not more than 3 per cent of salt (NaCl). If it contains more than 3 per cent of salt (NaCl) the amount of salt must constitute a part of the brand name, provided that in no case shall the salt content of this product exceed 7 per cent. (Adopted 1933).

Fish Residue Meal (Feeding) is the clean, dried, undecomposed residue from the manufacture of glue from non-oily fish, and contains not more than 3 per cent of salt (NaCl). If it contains more than 3 per cent of salt (NaCl) the amount of salt must constitute a part of the brand name, provided that in no case shall the salt content of this product exceed 7 per cent. (Adopted 1933).

Crab Meal (Feeding) is prepared from the undecomposed dried waste of the crab industry and contains the shell, viscera and part or all of the flesh. It contains not less than 25 per cent of protein and not more than 3 per cent of salt (NaCl). If it contains more than 3 per cent of salt (NaCl) the amount of salt must constitute a part of the brand name, provided that in no case shall the salt content of this product exceed 7 per cent. (Adopted 1933).

Shrimp Meal (Feeding) is prepared from the undecomposed dried waste of the shrimp industry and contains the heads, hull and/or the whole shrimp and not more than 3 per cent of salt (NaCl). If it contains more than 3 per cent of salt (NaCl) the amount of salt must constitute a part of the brand name, provided that in no case shall the salt content of this product exceed 7 per cent. (Adopted 1933).

Whale Meal (Feeding) is prepared from the clean, dried, undecomposed flesh of the whale, after part of the oil has been extracted. It contains not more than 3 per cent of salt (NaCl). If it contains more than 3 per cent of salt (NaCl) the amount of salt must constitute a part of the brand name, provided that in no case shall the salt content of this product exceed 7 per cent. (Adopted 1933).

Cod Liver Oil is the product obtained by extraction of part of the oil from cod livers. (Adopted 1932).

Sardine Oil or **Pilchard Oil** is the product obtained by extraction of part of the oil from the whole Pacific sardine or pilchard or from cannery refuse of this species of fish. (Adopted 1932).

Salmon Oil is the product obtained by extraction of part of the oil from the cannery refuse of salmon. (Adopted 1932).

Tuna Oil is the product obtained by extraction of part of the oil from the cannery refuse of tuna. (Adopted 1932).

Menhaden Oil is the product obtained by extraction of part of the oil from whole menhaden. (Adopted 1932).

Herring Oil is the product obtained by extraction of part of the oil from the whole herring or part of the herring. (Adopted 1933).

Salmon Liver Oil is the product obtained by extraction of part of the oil from salmon livers. (Adopted 1933).

Stearine (Feeding) is the solid material obtained by filtration from an animal or vegetable oil after chilling or freezing in the process of refining. When this product is sold as a feed, the term shall be prefixed by the name of the oil from which it is obtained. (Adopted 1934).

Milk Products

Evaporated Buttermilk (Feeding), **Concentrated Buttermilk** (Feeding), or **Condensed Buttermilk** (Feeding) is the product resulting from the removal of a considerable portion of water from clean, sound buttermilk derived from natural cream to which no foreign substances have been added excepting such as are permitted and necessary in the manufacture of butter. It contains not less than 27 per cent of total solids, not less than 2 per cent of butterfat, and not more than .14 per cent of ash for each per cent of solids. This definition does not prohibit the use of a distinctive trade name, provided it is followed by one of the names given. (Adopted prior to 1928).

Dried Skimmed Milk (Feeding) is the product resulting from the removal of water from clean, sound skimmed milk. It contains not more than 8 per cent of moisture. (Adopted 1930.)

Condensed Skimmed Milk (Feeding) is the product resulting from the removal of a considerable portion of water from clean, sound skimmed milk. It contains not less than 27 per cent of total solids. (Adopted 1930.)

Dried Buttermilk (Feeding) is the product resulting from the removal of water from clean, sound buttermilk derived from natural cream to which no foreign substances have been added, excepting such as are necessary and permitted in the manufacture of butter. It contains not

more than 8 per cent of moisture, not more than 13 per cent of mineral matter (ash), and not less than 5 per cent of butterfat, as determined by the Roese-Gottlieb method. (Adopted 1932.)

Dried Soured Skimmed Milk (Feeding) is the product resulting from the removal of water from clean, sound skimmed milk which has been soured by a suitable culture of lactic bacteria. It contains not more than 8 per cent of moisture. (Adopted 1932.)

Evaporated Soured Skimmed Milk (Feeding), **Concentrated Soured Skimmed Milk** (Feeding), or **Condensed Soured Skimmed Milk** (Feeding) is the product resulting from the removal of a considerable portion of water from clean, sound skimmed milk which has been soured by a suitable culture of lactic bacteria. It contains not less than 27 per cent of total solids. (Adopted 1932.)

Milk Sugar Feed or **Dried Whey** (Feeding) is the by-product from the manufacture of cheese and should contain at least 70 per cent of lactose (milk sugar). (Adopted 1932.)

Dried Whey (Feeding) is the by-product from the manufacture of cheese and/or casein. This product shall contain at least 65 per cent of lactose (milk sugar). (Adopted 1934.)

Milo Products

Milo Chop consists of the entire grain removed from the head and chopped. Standard: It must contain not less than 10 per cent of protein, 2.50 per cent of fat, and not more than 3 per cent of crude fiber.

Milo Head Chop consists of the entire head, chopped. Standard: It must contain not less than 8 per cent of protein, 2.50 per cent of fat, and not more than 8 per cent of crude fiber.

Milo Head Stems consists of the head of the milo from which the grain has been removed.

Oat Products

Oat Hulls is the product consisting of the outer covering of the oat. (Adopted prior to 1928).

Oat Middlings is the product consisting of the floury portions of the oat groat obtained in the milling of rolled oats. (Adopted prior to 1928).

Oat Shorts is the product consisting of the covering of the oat grain lying immediately inside the hull, being a fuzzy material carrying with it considerable portions of the fine floury part of the groat obtained in the milling of rolled oats. (Adopted prior to 1928).

Clipped Oat By-Product is the by-product obtained in the manufacture of clipped oats. It may contain the light chaffy material broken from the

end of the hulls, empty hulls, light immature oats, and dust. It must not contain an excessive amount of oat hulls. (Adopted prior to 1928).

Oat Chop, Ground Oats, Pulverized Oats, Crushed Oats, or Crimped Oats consists of the entire product made by chopping, cutting, grinding, crushing, or crimping whole oats. (Adopted 1931).

Oat Groats are the kernels produced from cleaned and dried oats in the process of manufacturing oat meal. (Adopted 1931).

Hulled Oats or Undried Oat Groats are the kernels produced from the undried grain in the process of hulling oats. (Adopted 1931).

Oat Mill Feed (Oat Hulls, Oat Shorts and Oat Middlings) is the entire by-product produced in the manufacture of oat groats and consists of oat hulls, oat shorts and oat middlings. If used in a mixed feed, it shall be called Oat Mill Feed (Oat Hulls, Oat Shorts and Oat Middlings). (Adopted 1932).

Oat Meal or Ground Oat Groats is the product produced by cutting cracking, or grinding oat groats. (Adopted 1931).

Rolled Oat Groats or Rolled Oats is the product obtained in the process of rolling oat groats. (Adopted 1931).

Peanut Products*

48 Per Cent Protein Peanut Meal is the product from the kernels of sound peanuts, free from excess of hulls and other foreign materials. Standard: It must be finely ground and of sweet odor, and must contain not less than 48 per cent of protein, not less than 7 per cent of fat, and not more than 9 per cent of crude fiber.

45 Per Cent Protein Peanut Meal is the product from the kernels of sound peanuts, free from excess of hulls and other foreign materials. Standard: It must be of sweet odor, and contain not less than 45 per cent of protein, not less than 6 per cent of fat, and not more than 10 per cent of crude fiber.

43 Per Cent Protein Peanut Meal is the product from the kernels of sound peanuts, reasonably free from excess of hulls and other foreign materials. Standard: It must be of sweet odor, and contain not less than 43 per cent of protein, not less than 6 per cent of fat, and not more than 12 per cent of crude fiber.

Peanut Cake shall correspond to peanut meal as to composition and as to standards.

36 Per Cent Protein Whole-Pressed Peanuts is the product resulting from subjecting the whole, sound, mature, clean peanuts, free from sticks, stems, and dirt, to pressure for the extraction of oil, and includes the entire peanut less the oil extracted. Standard: It must contain not less than 36 per cent of protein and not more than 22 per cent of crude fiber.

*Definitions not adopted by the Association of American Feed Control Officials.

34 Per Cent Protein Whole-Pressed Peanuts is the product resulting from subjecting the whole, sound, mature, clean peanuts, reasonably free from sticks and stems, to pressure for the extraction of oil, and includes the entire peanut less the oil extracted. Standard: It must contain not less than 34 per cent of protein and not more than 24 per cent of crude fiber.

Ground Whole-Pressed Peanuts shall correspond to whole-pressed peanuts as to composition and as to standards.

Rice Products

Rice Bran is the pericarp or bran layer of the rice, with only such quantity of hull fragments as is unavoidable in the regular milling of rice. (Adopted prior to 1928). Standard: It must contain not less than 11 per cent of crude protein and 10 per cent of crude fat, and not more than 15 per cent of crude fiber.

Rice Polish is the finely powdered material obtained in polishing the kernel. (Adopted prior to 1928). Standard: It must contain not less than 11 per cent of crude protein and 6 per cent of crude fat, and not more than 4 per cent of crude fiber.

Rice Hulls is the product consisting of the outer coverings of the rice. (Adopted prior to 1928).

Rice Meal is ground brown rice or ground rice after the hull has been removed. (Adopted prior to 1928).

Ground Rough Rice is ground rice from which the hull has not been removed or ground paddy rice. (Adopted prior to 1928).

Rice Stone Bran is the siftings from the material secured in removing hulls from rice and contains rice germs, broken rice, and some rice hulls. (Adopted prior to 1928).

Rice Huller Bran is a product secured by the huller and cones from brown rice and consists mostly of the bran and germs. (Adopted prior to 1928).

Sorghum Products

Head Chop is the product consisting of the entire heads of the grain sorghums chopped, and should bear the name of the sorghum from which it is made. This includes, among others, kafir head chop, milo head chop, feterita head chop, and sorghum head chop. (Adopted prior to 1928). (See Table 5 for standards).

Head Stems is the product consisting of the stems from the heads of the grain sorghums after the grain has been removed, and should bear the name of the sorghum from which it is made. (Adopted prior to 1928).

Soybean Products

Ground Soybeans is the product obtained by grinding whole soybeans without cooking or removing any of the oil. (Adopted 1933).

----- **Per Cent Protein Soybean Oil Cake or Soybean Oil Chips** is the product obtained by crushing, cooking and removing part of the oil from soybeans. (Adopted 1933).

----- **Per Cent Protein Soybean Oil Meal** is ground soybean oil cake or ground soybean oil chips. (Adopted 1933).

Wheat Products

Wheat Bran is the coarse outer covering of the wheat kernel as separated from cleaned and scoured wheat in the usual process of commercial milling. (Adopted prior to 1928). Standard: It must contain not less than 14.50 per cent of crude protein and 3 per cent of crude fat, and not more than 10 per cent of crude fiber.

Wheat Red Dog is a by-product obtained in the usual commercial process of flour milling, consisting principally of aleurone with small quantities of wheat flour and fine wheat bran particles and must not contain more than 4 per cent of crude fiber. (Adopted prior to 1928).

Wheat Brown Shorts consists mostly of the fine particles of wheat bran, wheat germ, and very little of the fibrous offal obtained from the "tail of the mill." This product must be obtained in the usual commercial process of milling. (Adopted prior to 1928). Standard: It must contain not less than 15 per cent of crude protein and 3.5 per cent of crude fat, and not more than 7.5 per cent of crude fiber.

Wheat Gray Shorts (Total Shorts) consists of the fine particles of the outer bran, the inner bran or bee-wing bran, the germ and the offal, or fibrous material obtained from the "tail of the mill." This product must be obtained in the usual process of commercial milling. (Adopted prior to 1928). Standard: It must contain not less than 15 per cent of crude protein and 3.5 per cent of crude fat, and not more than 6 per cent of crude fiber.

Wheat White Shorts consists of a small portion of the fine wheat bran particles and the wheat germ and a large portion of the fibrous offal obtained from the "tail of the mill." This product must be obtained in the usual process of flour milling. (Adopted prior to 1928.) Standard: It must contain not less than 14.5 per cent of crude protein and 3 per cent of crude fat, and not more than 3.5 per cent of crude fiber.

Wheat Mixed Feed consists of wheat bran and the gray or total shorts combined in the proportions obtained in the usual process of commercial milling. (Adopted prior to 1928.) Standard: It must contain not less than 15 per cent of crude protein and 3.5 per cent of crude fat, and not more than 8.5 per cent of crude fiber.

Wheat Low-Grade Feed Flour is a by-product obtained in the usual commercial process of flour milling, consisting principally of wheat flour with small quantities of aleurone and fine wheat bran particles and must

not contain more than 1.5 per cent of crude fiber. (Adopted prior to 1928.)

Screenings consist of the smaller imperfect grains, weed seeds, and other foreign materials having feed value, separated in cleaning the grain. (Adopted prior to 1928.)

Scourings consist of such portions of the cuticle, brush, white caps, dust, smut, and other materials as are separated from the grain in the usual commercial process of scouring. (Adopted prior to 1928.)

Note: If to any of the wheat by-product feeds there should be added screenings or scourings, as defined, either ground or unground, bolted or unbolted, such brand shall be so registered, labeled, and sold as clearly to indicate this fact. The word "Screenings", or "Scourings", as the case may be, shall appear as a part of the name or brand and shall be printed in type of the same size and face as the remainder of the brand name. When the word "Screenings" appears it is not necessary to show also on the label the word "Scourings." (Adopted prior to 1928.)

Wheat Chop is the entire berry of sound wheat, chopped. Standard: It must contain not less than 12 per cent of crude protein and 2 per cent of crude fat, and not more than 3 per cent of crude fiber.

Miscellaneous Products

Palm Kernel Oil Meal is the ground residue from the extraction of part of the oil by pressure or solvents from the kernel of the fruit of *Elaeis guineensis* or *Elaeis melanococca*. (Adopted prior to 1928.)

Ground Velvet Bean and Pod is the product derived by grinding velvet beans with the pod. It contains no additional pods or other materials. (Adopted prior to 1928.)

Velvet Bean Meal is ground velvet beans containing only an unavoidable trace of hulls or pods. (Adopted prior to 1928.)

----- Per Cent Protein Coconut Oil Meal or ----- Per Cent Protein Copra Oil Meal is the ground residue from the extraction of part of the oil from the dried meat of the coconut. (Adopted prior to 1928.)

• **Ivory Nut Meal** is the ground waste material resulting from the manufacture of buttons and similar articles from the vegetable ivory nut. (Adopted prior to 1928.)

Processed Garbage is composed of dried animal and vegetable waste from garbage collected sufficiently often that harmful decomposition has not set in, and separated from materials such as crockery and glass. Its odor must not be suggestive of the presence of decomposition and it must contain less than one per cent of glass. None of it shall contain knife-like or needle-like particles, and the maximum percentage of glass should be stated on the label when present in excess of one-fifth of one per cent. (Adopted prior to 1928.)

Chop is a ground or chopped feed composed of one or more different cereals or by-products thereof. If it bears a name descriptive of the kind

of cereals, it must be made exclusively of the entire grains of those cereals. (Adopted prior to 1928.)

Dried Beet Pulp is the dried residue from sugar beets which have been cleaned and freed from crowns, leaves, and sand, and which have been extracted in the process of manufacturing sugar. (Adopted prior to 1928.)

TENTATIVE DEFINITIONS

These definitions have received favorable consideration, but are not official. They are subject to revision before final adoption.

T-1 **Animal Charcoal** or **Bone Black** is the product obtained by charring bones in closed retorts, containing not less than 14.75 per cent of phosphorus (P).

T-2 **Spent Bone Black** is the product resulting from the repeated charring of bone black or animal charcoal after use in clarifying sugar solutions. It shall contain at least 11.50 per cent of phosphorus (P).

T-3 **Anti-rachitic Oil** is an oil recognized as a satisfactory source of vitamin D obtained from fish or parts thereof. This term will be recognized only in the declaration of ingredients in a proprietary feed. The name of the specific oil may be used in lieu of this name if desired.

T-4 **Brewers' Dried Grains** is the dried extracted residue of barley malt and/or other cereal grain or grain products resulting from the manufacture of wort.

T-5 **Beet Molasses (Feeding)** is a by-product of the manufacture of beet sugar from sugar beet and should contain 51 per cent or more of total sugars expressed as invert sugar, not more than 10 per cent ash, and should have a specific gravity of not less than 1.4 (41.5° Baume) at 20° Centigrade.

T-6 **Cane Molasses (Feeding)** is a by-product of the manufacture of sugar from cane and should contain 51 per cent or more of total sugars expressed as invert sugar, not more than 8 per cent ash, and should have a specific gravity of not less than 1.4 (41.5° Baume) at 20° Centigrade.

T-7 **Cheese Rind (Feeding)** is cooked, partially defatted cheese rind.

T-8 **Corn Gluten Feed** is that part of commercial shelled corn that remains after the extraction of the larger part of the starch and oil by the processes employed in the manufacture of corn starch or syrup. It may or may not contain one or more of the following: corn solubles, corn germ, corn germ meal.

T-9 **Corn Gluten Meal** is that part of commercial shelled corn that remains after the extraction of the larger part of the starch and oil, and the separation of the bran by the processes employed in the manufacture of corn starch or syrup. It may or may not contain one or more of the following: corn solubles, corn germ, corn germ meal.

T-10 **Hominy Feed** is a mixture of corn bran, corn germ and a part of the starchy portion of either white or yellow corn kernels or mixture thereof as produced in the manufacture of pearl hominy, hominy grits

or table meal, and shall contain not less than 5 per cent of crude fat. If prefixed with the words "white" or "yellow", the product must correspond thereto.

T-11 Iodized Salt (Feeding) is common salt (NaCl) containing not less than 0.015 per cent of iodine, uniformly distributed.

T-12 Screenings (Feeding) consist of a mixture of mill or elevator-run materials or a combination of varying amounts of materials obtained in the process of cleaning grain and seed, such as inferior, light and broken grain and seed, weed seeds, hulls, chaff, joints, straw, elevator dust and floor sweepings. They must be relatively free of injurious weed seeds, sand and dirt. They must not contain more than 14% fiber and 6.50% ash. If they bear a name descriptive of their kind and origin, they must correspond thereto.

T-13 Screenings-Grain (Feeding) consist of inferior, light and broken grain and seed obtained in the process of cleaning grain and seed or recleaning screenings. They must be relatively free of weed seeds, chaff, straw, hulls, joints, sand and dirt, and other foreign materials. If they bear a name descriptive of their kind and origin, they must correspond thereto.

T-14 Screenings Waste or Screenings Refuse is a mixture of materials of little or no feeding value, or injurious as a feed, obtained in the process of cleaning grain and seed or recleaning screenings, such as weed seeds, which may be more or less injurious, chaff, hulls, straw, sticks, joints, elevator dust, floor sweepings, sand and dirt.

MINERAL FEEDS

Mixed feeds containing both feed and more than 5 per cent of mineral ingredients require, in addition to the usual declaration of the chemical feed analysis, a declaration of each ingredient contained therein and the minimum percentages of lime expressed as CaO, phosphoric acid expressed as P_2O_5 , iodine (I), and the maximum percentage of salt (NaCl) if same be present. If minerals predominate in the mixture, the usual declaration of the chemical feed analysis, with the exception of protein, may be omitted.

In mineral feeds containing no organic ingredient, the usual chemical feed guaranty need not be made. A declaration should be made of each ingredient contained therein and the minimum percentage of lime expressed as CaO, phosphoric acid expressed as P_2O_5 , iodine (I), and the maximum percentage of salt (NaCl) if same be present.

The mineral ingredients should be stated in the common English terms, if any such terms exist.

RESOLUTIONS ADOPTED BY THE ASSOCIATION OF AMERICAN FEED CONTROL OFFICIALS

The following resolutions have been adopted by the Association of American Feed Control Officials:

Resolved, That it is the sense of this Association that we understand the term "Nitrogen-free Extract" to cover the product indicated by the

percentage obtained by subtracting from 100 per cent the sum of the percentages of Ash, Moisture, Protein, Fat and Fiber; (Adopted prior to 1923).

Resolved, That the term "Carbohydrates" be interpreted to cover the product indicated by the percentage obtained by the addition of the percentages of crude fiber and nitrogen-free extract; (Adopted prior to 1923.)

Resolved, That it is the sense of the Association that a ton of feed be 2000 pounds, net; (Adopted prior to 1923).

Resolved, That this Association go on record as opposing the use of second-hand bags unless they are turned wrong side out so that the original stenciling will not be displayed; (Adopted prior to 1923).

Resolved, That the Association go on record to the effect that the term cracked corn does not apply to degermed cracked corn; (Adopted prior to 1923).

Resolved, That this Association go on record as condemning the practice of packing feeding stuffs in bags containing 99 pounds net and billing and charging for 100 pounds net; (Adopted 1923).

Whereas, Linseed Oil Meal is sold more or less on the basis of the protein content, as in the case of cottonseed meal; therefore, be it

Resolved, That the percentage of protein should be prefixed to linseed cake or meal, as is done with cottonseed meal; for example, 34 per cent protein linseed meal; (Adopted 1923).

Resolved, That it is the sense of this Association that no product sold under a trade or proprietary name be recognized for the purpose of formulating definitions, standards, etc.; (Adopted 1927).

Resolved, That all mixtures containing mineral ingredients generally regarded as dietary factors essential for the normal nutrition of animals and which are sold or represented for the primary purpose of supplying these minerals as additions to rations in which these same mineral factors may be deficient, be classified as mineral feeds;

Resolved, That all other preparations which are sold or represented primarily for the cure, mitigation, or prevention of disease be classified by this Association as drugs, medicines, or specifics; (Adopted 1926).

Resolved, That this Association go on record as condemning the use of the word vitamin in a brand name, and as opposing the acceptance of registration of feeds with the word in the brand name; (Adopted 1929).

Resolved, (a) That it is the sense of this Association that the names of feed materials or their combinations must not be misleading as to the kind, character and nature of the material or materials;

(b) That the name of each feed material should be stated in its simplest form and in the common English term, if such term exists, omitting all superfluous or ambiguous words;

(c) That if a descriptive name is used, the material must correspond thereto; (Adopted 1930).

Resolved, That this Association go on record as disapproving any use of artificial colors in the manufacture of feed stuffs; (Adopted 1931).

Resolved, That this Association go on record as condemning the use of any contraction of the word "vitamin", or any word suggesting vitamin in a brand name, and as opposing the acceptance of registrations of feeds under names which are in conflict with this resolution; (Adopted 1932).

Resolved, that any material sold primarily as a vitamin D supplement for poultry shall be labeled with a minimum guarantee of anti-rachitic potency, specifying the minimum percentage level at which normal calcification is produced, according to the tentative method of analysis as adopted by the Association of Official Agricultural Chemists; (Adopted 1933).

Resolved, that all tentative definitions should not be used until adopted as official, unless specified action of the Association is taken. (Adopted 1933).

Resolved, that the Association of American Feed Control Officials request the cooperation of all recognized feed manufacturing associations in submitting for approval any contemplated changes in definitions of feeding stuffs which in any way conflict with the official definitions as adopted by this organization.

It is also requested that wherever practicable any existing conflicting definitions be changed to conform to the official definitions. (Adopted 1934).

Whereas, many States which have adopted the Association's definitions for cottonseed products require that a guarantee of fat and crude fiber content in cottonseed meal be made, therefore, for the sake of uniformity of labels and registration, and in such cases where there is no conflict with existing feed laws,

Be it Resolved, that the following guarantee of fat and crude fibre be recommended:

	Crude Fat	Crude Fibre
	Not less than	Not more than
For 36 % Protein Cottonseed Meal	4.50 %	16.00%
For 41 % Protein Cottonseed Meal	5.00 %	13.00%
For 43 % Protein Cottonseed Meal	5.25 %	12.00%

(Adopted 1934)

TENTATIVE GUARANTIES FOR FEEDS AND ANALYSES FOR CALCULATION PURPOSES

Table 6 shows tentative guaranties for the convenience of manufacturers in registering feeding stuffs for sale in Texas and also analyses which can be used in calculating guaranties of mixed feeds. There will be no objection if manufacturers wish to register under better guaranties if the quality of the feeds justify this action. It is to be understood, however, that manufacturers are responsible for their guaranties and that the Division of Feed Control Service accepts no responsibility for feeds failing to meet the guaranties.

Table 6. Tentative Guaranties and Analyses

Name of Feed	Crude Protein not less than Per Cent	Crude Fat not less than Per Cent	Crude Fiber not more than Per Cent	Nitrogen- free Extract not less than Per Cent
Chopped Alfalfa	13.00	1.50	33.00	35.00
Alfalfa Leaf Meal	20.00	2.50	18.00	40.00
Alfalfa Meal	13.00	1.50	33.00	35.00
Alfalfa Stem Meal	9.00	.80	40.00	30.00
Whole Barley Chop	11.00	1.50	6.00	65.00
Hulled Barley	10.00	2.50	2.50	72.00
Dried Beet Pulp	8.00	.50	22.00	52.00
Blood Meal	80.00	1.00	2.00	3.00
Raw Bone Meal	23.00	2.00	5.00	0.00
Special Steamed Bone Meal	5.00	0.00	3.00	4.00
Brewers' Dried Grains	21.00	6.00	18.00	40.00
Buckwheat	10.00	2.50	10.00	62.00
Dried Buttermilk (Feeding)	32.00	5.00	1.00	35.00
Cocconut Oil Meal	20.00	6.00	12.00	40.00
Corn Bran	8.00	5.00	12.00	60.00
Corn Chop	9.00	3.50	3.00	70.00
Ear Corn Chop	8.20	3.20	8.00	64.00
Ear Corn Chop with Husk	8.00	3.00	10.00	65.00
Corn Cobs	2.00	.50	34.00	50.00
Corn Feed Meal	8.00	3.00	3.00	67.00
Corn Germ Meal	18.00	7.00	9.00	50.00
Corn Gluten Feed	23.00	2.50	7.00	50.00
Corn Gluten Meal	40.00	1.00	4.00	40.00
Cotton Burs	8.00	2.00	30.00	44.00

PURPOSE OF THE TEXAS FEED LAW

The purpose of the Texas Feed Law is to afford protection to manufacturers and purchasers of feeding stuffs in the State of Texas.

Through the rigid enforcement of the law the Division of Feed Control Service furnishes protection against adulterated feed, which has caused many low-grade feeds to be withdrawn from the market. Consumers have become better acquainted with the value of various materials used for feeding animals, and they are enabled to purchase feeds more profitably than before the feed law was enacted. By comparing the ingredients, analyses, and prices of various feeds, the purchaser is enabled to determine for himself which feeding stuff is best suited for his particular need. If he should have any difficulty in this regard he may write to the Division for additional information.

The honest manufacturer of feeding stuffs is protected by the development and impartial enforcement of uniform standards and definitions

which have a tendency to eliminate unfair competition. Every manufacturer is expected to comply with the law, not only for the sake of compliance, but because in the long run it is the wiser course. The manufacturer who habitually complies with the law has the confidence of the consumers of the feed and the public in general and avoids the unnecessary expense and the unsavory reputation incident to prosecution for violation.

The following summary of the Texas Feed Law is given for the information of those who are not thoroughly familiar with its provisions:

SUMMARY OF THE TEXAS FEED LAW

1. (a) Feeding stuffs covered by the law:

All materials offered or exposed for sale, or distributed or sold for feeding purposes except those especially excluded.

(b) Feeding stuffs not covered by the law:

Hay and straw, whole seeds or grains of wheat, barley, rye, oats, Indian corn, rice, buckwheat, or broom corn; any other whole or unground grains or seeds.

2. Statements to be printed on official tags securely attached to bags:

- (a) Net weight of package.
- (b) Name of feeding stuff.
- (c) Name and address of manufacturer or importer.
- (d) Place of manufacture.
- (e) Minimum percentage of crude protein.
- (f) Minimum percentage of crude fat.
- (g) Minimum percentage of nitrogen-free extract.
- (h) Maximum percentage of crude fiber.
- (i) Names of ingredients (if a mixed feed).
- (j) Percentage of each ingredient when rice hulls, peanut hulls, corn cobs, oat hulls, cottonseed hulls, or similar substances are present in a mixed feed.

A copy of the Texas Feed Law will be sent to interested persons on request.

RULINGS UNDER THE LAW

The Director of the Texas Agricultural Experiment Station is empowered to adopt such regulations as may be necessary for the enforcement of the Texas Feed Law. In accordance with this provision, regulations have been promulgated and printed in Circular No. 58, a copy of which will be gladly furnished upon request.

REFUNDS

The Texas Feed Law makes no provision for the payment of refunds to cover deficiencies and although this practice often shows the good inten-

tion of the manufacturer, the payment of such refunds will have no bearing on any subsequent action which may be taken in case of violation of the law. The law does not contemplate that the purchaser of a feeding stuff should be required to have an analysis made in order to secure protection. When refunds are paid, dealers will be required to prorate them to the purchasers so that the consumers may receive the benefit. **The payment of refunds never fully remunerates the consumer for being furnished feed which is deficient in valuable nutrients, and manufacturers are advised to be certain in advance that shipments are up to the guaranty in every respect.**

CONTROL OF INTERSTATE SHIPMENTS

In enforcing the law the state has the co-operation and assistance of the United States Department of Agriculture as regards adulterated and misbranded interstate shipments. We have received a commission from the United States Department of Agriculture to collect samples of interstate shipments of feed and practically all such shipments showing a deficiency and adulteration are sampled, not only under the Texas Feed Law, but also under the Federal Food and Drugs Act of 1906. The Federal samples are either analyzed under the direction of Dr. G. S. Fraps, Collaborating Chemist, or forwarded to the Food and Drug Administration Laboratory at New Orleans, Denver, St. Louis, or Washington. The Federal government prosecutes many of the manufacturers of these feeds, but this does not preclude legal action by the Texas Feed Control Service if considered necessary for the protection of Texas consumers.

Co-operation with the Food and Drug Administration of the United States Department of Agriculture has been continued and thus control exercised over interstate shipments of feed as protection to Texas purchasers.

SHIPMENTS WITHDRAWN FROM SALE

All dealers are advised to withdraw from sale shipments of feed which they know do not conform to the requirements of the Texas Feed Law, until such time when they can be legally sold. The dealer is directly responsible if feed in his possession fails to meet the requirements of the law and the same penalty attaches to exposing or offering for sale any unlabeled feed as for selling the same. The dealer should always be a law-abiding citizen and voluntarily withdraw from sale all untagged shipments and those which he knows or suspects are adulterated or misbranded and then write to the Division of Feed Control Service for instructions and its co-operation.

Table 7 shows the summary of the feeds withdrawn from sale during the year ended August 31, 1935, and gives the number of shipments withdrawn, the amounts, and the special reasons for their withdrawal from sale. It also shows the number of manufacturers represented.

Shipments found untagged by the inspectors were required to be labeled with tags furnished by the manufacturers. Improperly labeled shipments were relabeled with official tags properly printed, or with tags showing guaranties that could be maintained, and, in still other cases, shipments were returned to the manufacturer. The sales of goods below guaranties were adjusted, in practically all instances, by manufacturers paying refunds to dealers and consumers when the deficiencies were sufficient to warrant such action. In all cases when refunds were made to dealers, the dealers were advised to prorate the same among their customers, in so far as possible, so that the ultimate consumer would receive its benefit. Attention is directed to special information on pages 35 and 36 regarding refunds.

Table 7. Shipments Withdrawn from Sale

No. of Shipments Withdrawn from sale	No. of Manufacturers represented	Reasons for Withdrawal from Sale	Amount Withdrawn, Tons
485	197	Not tagged.....	1,055
22	18	Deficient in crude protein.....	221

PROTEIN CONTENT OF COTTONSEED PRODUCTS SOLD IN TEXAS

Table 8 shows the minimum, maximum, and average content of crude protein in the cottonseed products inspected during the year ended August 31, 1935. It will be noticed that in many instances the minimum percentage of protein is much less than the guaranty. Whenever the guaranty is not maintained the provisions of the Texas Feed Law have been violated although the average per cent of crude protein may exceed the amount guaranteed. From Texas cottonseed it is possible to produce cottonseed meal and cake of high protein content, and it should be the aim of each oil mill to manufacture cottonseed meal and cake containing not less than 43 per cent of crude protein.

RESULTS OF ANALYSES

Table 9 contains a detailed report of the results obtained in the inspection of feeds during the season of 1934-35. In this table will be found

the analyses of all the official samples taken by the inspectors, together with the analyses of many samples of feed sent in by manufacturers for registration during the year ended August 31, 1935. Consumers and agents are advised to study this table and purchase from and represent companies which ship feed according to law.

The footnotes at the bottom of the pages refer to matters of importance in connection with the feeds designated, and we advise that they be carefully considered.

SUMMARY

This Bulletin contains a report of the inspection of feeding stuffs sold in the State of Texas during the year which ended August 31, 1935.

In addition to definitions of terms used in reporting analyses of feeding stuffs there is a table showing the average composition of the feeds inspected during the year and also one showing the digestible protein and productive energy of feeds.

A table is given showing the minimum, maximum, and average crude protein content of cottonseed products inspected during the season 1934-35.

Table 3 shows the estimated tonnage of feed sold in Texas yearly during the past twenty-nine years as computed from the sale of inspection tags.

The labeling of vitamin D supplements for poultry is explained, and the assays of some registered vitamin D carriers are given in Table 4.

Reference is made to the value of mixed feeds containing low-grade roughage.

Suggestions are given to purchasers of feed which should aid them in securing the kind of feed desired and buying feed which comes up to the representations of the manufacturers.

The chemical standards for various by-products and special-purpose mixed feeds are given in Table 5.

This Bulletin also contains the definitions of simple feed commodities as adopted by the Division of Feed Control Service and Association of American Feed Control Officials.

A table is given showing tentative guaranties for feed for the convenience of manufacturers in registering feeding stuffs for sale in Texas, and also analyses which can be used in calculating guaranties of mixed feeds.

The purpose of the Texas Feed Law is explained and a summary of the law is given. Mention is made of regulations promulgated under the provisions of the Texas Feed Law and information is given concerning the payment of refunds and the control of interstate shipments.

Table 7 shows the shipments withdrawn from sale and the reason for taking this action.

Table 9 gives a detailed report of the results obtained in the inspection of feeding stuffs during the year ended August 31, 1935.
