[Blank Page in Original Bulletin]

This bulletin is the fortieth annual report on the inspection of feeding stuffs sold in Texas under the provisions of the Texas Feed Law. During the year ended August 31, 1945, 3,570 samples were subjected to the regular chemical feed analysis and microscopical examination by the Division of Chemistry, 3,432 of which were secured by inspectors. In addition, thirty-seven samples of feed were tested for carotene content. Twenty-nine samples of cottonseed cake were examined for hardness. One thousand one hundred and twenty-three determinations of salt and one thousand one hundred and fourteen determinations of carbonate of lime in mixed feeds were also made.

In this bulletin is found the analysis of each sample and a detailed report of the results obtained in the inspection of feeding stuffs from September 1, 1944, to August 31, 1945.

Tables are given showing the average composition, digestible protein and productive energy of many feeding stuffs analyzed. An estimated total of 3,178,266 tons of commercial feeding stuffs were sold in the State during the fiscal year covered by this report.

Chemical standards for special-purpose mixed feeds are shown together with additional information on the requirements of the Texas Feed Law and the composition of feeding stuffs.

EXHIBIT TO BRIEFING

## COMMERCIAL FEEDING STUFFS, SEPTEMBER 1, 1944 TO AUGUST 31, 1945\*

F. D. Brock, Chief, and M. P. Holleman, Assistant Chief, Division of Feed Control Service†

This bulletin is a report on the work performed by the Texas Agricultural Experiment Station in the inspection of feeding stuffs sold in Texas during the year ended August 31, 1945. It also includes definitions of terms used in reporting analyses of feeding stuffs and information concerning the payment of refunds and the control of interstate shipments. Other subjects are treated in order as follows:

Suggestions are made to purchasers of feed which should aid them in securing the kind of feed desired, and in buying feed which comes up to the representations of the manufacturers.

The label provisions of the law as applied to inspection tax tags are explained. The costs of tags of various denominations based on the tax rate are listed.

Authority for the adoption of definitions of and standards for feeds is mentioned, and new definitions and standards proposed. Table 1 shows chemical standards for special-purpose mixed feeds.

A list is given of the cooperative research projects carried on during the past year and supported by Division of Feed Control Service funds.

The estimated tonnage of feed, with certain exceptions, sold in Texas yearly during the past thirty-nine years as computed from the sale of inspection tags is shown in Table 2.

Violations of the Texas Feed Law are enumerated with disposition of all court actions filed during the year. Table 3 shows shipments withdrawn from sale and the reasons for taking this action.

Table 4 shows the average composition of feeds inspected during the year and table 5 shows the digestible protein and productive energy of feeds for ruminants. A table is given showing the carotene content of a few feeds on the Texas market.

Reference is made to the hardness of cottonseed cake and pellets. Table 7 shows the crushing strength of several samples of cottonseed cake and pellets sold for feeding purposes.

Information is given on the number of inspection samples of mixed feeds containing salt and carbonate of lime analyzed. Table 8 summarizes the results of these determinations.

Tables 9 and 10 give detailed reports of the results of analyses of feeds inspected during the year ended August 31, 1945.

\*Manuscript submitted for publication on September 25, 1945.

†With the collaboration of the other members of the Division Staff. The chemical analyses and microscopical examination of feeding stuffs are made by the Division of Chemistry under the direction of Dr. G. S. Fraps, Chief.

## DEFINITIONS OF TERMS

**Protein** includes all the nitrogenous compounds of a feed, regardless of their nature and is equal to the nitrogen present multiplied by 6.25. The animal uses protein to restore the waste of tissues and muscles, and to form flesh. Protein may also be oxidized in the body to produce heat, or it may serve as a source of fat in case of a deficiency in carbohydrates and fat, accompanied by an excess of protein. It is, however, a costly source of heat and fat.

Protein enters very largely into the composition of the whites of eggs, lean meat, curd of milk, gelatin, etc. It is used for the building and repair of body tissue, for new growth, in the production of milk or eggs and, therefore, is a necessary ingredient for the feeder to purchase. It is an important nutrient in feeding stuffs and usually is the most expensive to purchase. With a given feeding stuff, the more protein it contains the better its quality, compared with other feeding stuffs of the same class. It is incorrect, however, to compare the value of feeding stuffs of different kinds on a protein basis alone. For example, a cottonseed meal containing 45 per cent of crude protein does not have five times the value of corn chop containing 9 per cent of crude protein. There are other constituents of both feeds, such as fats, starches, and sugars, which are of great value to animals. Corn chop contains more carbohydrates than does cottonseed meal.

**Fat** is composed of substances which are extracted from the dry feeding stuffs by ether, and consists chiefly of fats and oils in the case of most feeding stuffs, but in the case of fodders and hays it is composed to a great extent of waxes, chlorophyll, and other substances in addition to fat. A pound of digestible fat is equal to 2.25 pounds of digestible carbohydrates in producing heat and energy. Fat is used in the animal body as a source of body fat, to furnish heat to keep the body warm, to furnish energy to run the animal mechanism and to produce work. All muscular movements require energy, which is furnished by the oxidation of fats, carbohydrates, or protein.

**Fiber** is found in hays, straw, and similar material. It occurs in the cell walls and in the fibrous or woody parts of plants. It is the least digestible portion of a feed. By means of fermentation in the intestines fiber is digested to some extent by animals that chew the cud. The operation, however, consumes so much energy that a large proportion of the value of the fiber is taken up by the process of digestion. Ordinarily a feeding stuff having a high content of crude fiber is classed as a low-grade feed for the reason that such a feed usually is low in digestible protein and productive energy. Cottonseed hulls, oat hulls, peanut hulls, rice hulls, corn cobs, and materials of a similar nature contain high percentages of crude fiber. If sufficient bulky materials are available, such as hays, fodders, or grass, it is unwise for the feeder to expend money for the purchase of commercial feeding stuff containing large amounts of crude fiber, a constituent that is digested with difficulty.

If the crude fiber in cottonseed meal exceeds certain limits, it indicates that the feed is adulterated with cottonseed hulls. In a similar way, crude fiber in excess of a given standard indicates the presence of corn cobs or corn bran in corn chop, rice hulls in rice bran, etc.

**Nitrogen-free Extract** includes starches, sugars, gums, and other bodies of a similar nature. These, together with the fat, are oxidized to maintain the animal heat and to furnish energy for the production of work. The nitrogen-free extract of most feeding stuffs of a concentrated nature is composed largely of sugars and starches, which are readily digested.

**Moisture** is present in all feeding stuffs. The material may seem to be dry, but nevertheless, it contains an appreciable amount of water. An excess of water may cause the feed to heat or spoil, if stored under such conditions that the feed cannot dry out quickly enough.

**Ash** is the residue from a feeding stuff that has been burned. The ash consists chiefly of lime, magnesia, soda, and potash combined with chlorine and carbonic, sulphuric, or phosphoric acid which is derived from the soil. Constituents of ash are necessary to the animals inasmuch as they are used for the formation of bone, for constituents of the blood, and for other purposes. If the various necessary constituents of the ash are not present in sufficient quantity, the animal may not grow or produce as well as it should, or it may suffer from various diseases. Sometimes it is necessary to supplement the ash naturally present in feeds with additional amounts. Calcium and phosphorus are the constituents most often deficient. An excessive amount of ash in the feed may indicate adulteration with dirt, sand, or other mineral matter.

## REFUNDS

The Texas Feed Law makes no provision for the payment of refunds to cover deficiencies and although this practice often shows the good intention of the manufacturer, the payment of such refunds will have no bearing on any subsequent action which may be taken in case of violation of the law. The law does not contemplate that the purchaser of a feeding stuff should be required to have an analysis made in order to secure protection. When refunds are paid, manufacturers should always notify the Division to this effect so that proper credit may be given in the table of inspection results, and dealers will be required to prorate them to the purchasers so that the consumers may receive the benefit.

The amount of refund to be paid may be found by dividing the cost per ton by the protein guaranty which will give the cost of 1 per cent of protein. Multiply the result found by the per cent of deficiency and then multiply this figure by the total number of tons purchased.

Example: A shipment consisting of thirty tons of 43% Protein Cotton-

seed Meal is purchased for \$56.00 per ton. The deficiency in protein is 2 per cent. What is the amount of refund due?

$$\begin{array}{r} 56.00 \\ \hline - \quad \times 2 \times 30 = \$78.13 \\ 43 \end{array}$$

If a refund has been paid during the past year by any given manufacturer and Table 13 does not show this fact, it is because the manufacturer did not notify us that refund had been paid. The payment of refunds never fully remunerates the consumer for being furnished feed which is deficient in valuable nutrients, and manufacturers are advised to be certain in advance that shipments are up to the guaranty in every respect.

### SUGGESTIONS TO PURCHASERS OF FEED

**Examine Official Tags.**—In purchasing feeding stuffs, the purchaser should, for his own protection, always carefully examine the official tags attached and purchase on the official guaranty and actual analysis as indicated in the reports of the Division of Feed Control Service.

**Untagged Feed.**—Do not accept any feeding stuff unless Texas tax tags are attached to the sacks. When feeds are sold in bulk, the seller must furnish the purchaser with a sufficient number of properly printed Texas tax tags to cover the weight of the feed sold.

**Feed Not As Represented.**—In case any purchaser receives feed which he thinks is not as represented, or which might otherwise be in violation of the law, he may write to the Division of Feed Control Service, giving full details of the matter, stating the quantity on hand and his reasons for suspecting that the feed is not as represented. The Division will make a careful investigation and either send an inspector, if conditions justify so doing, or send instructions for taking a sample of the feed for further examination.

**Freight Bills, Invoices, Etc.**—It is important that purchasers of feed have available for use of the inspector the following information: freight bills and invoices covering each shipment; or, the total number of tons in each shipment; number and initials of car or license number of truck in which shipment is received; number and date of waybill; name of railroad issuing waybill; name of town from which shipment was made; name of firm from which feed was purchased; date shipment was received; and price per ton. This information is especially valuable to the Service in all cases involving the shipment of feed from other states, as it will assist in proving the sale and protecting Texas purchasers under the Federal law.

**Feed Samples.**—Samples of feed should not be sent to the Division of Feed Control Service until instructions are received from the Division as to quantity required and conditions under which samples are to be

prepared. All samples are forwarded at the sender's risk and will not be returned except by request within thirty days from date of receipt. Feed samples should not be sent to the Division of Feed Control Service if the results of analyses are to be used for private purposes. Commercial chemists should be employed in such cases.

**Seed Samples.**—Samples of seed upon which official purity and germination tests are desired, and all correspondence related thereto, should be directed to the **State Department of Agriculture, Seed Laboratory Division, Austin 14, Texas.**

### CONTROL OF INTERSTATE SHIPMENTS

In enforcing the law the State has the cooperation and assistance of the Federal Security Agency as regards adulterated and misbranded interstate shipments. We have received a commission from the Federal Security Agency to collect samples of interstate shipments of feed and practically all such shipments showing a deficiency and adulteration are sampled, not only under the Texas Feed Law, but also under the Federal Food, Drug, and Cosmetic Act of 1938. The Federal samples are either analyzed under the direction of Dr. G. S. Fraps, Collaborating Chemist, or forwarded to the Food and Drug Administration Laboratory at New Orleans, Denver, St. Louis, or Washington. The Federal government prosecutes many of the manufacturers of these feeds, but this does not preclude legal action by the Texas Feed Control Service if considered necessary for the protection of Texas consumers.

Cooperation with the Food and Drug Administration of the Federal Security Agency has been continued and thus control exercised over interstate shipments of feed as protection to Texas purchasers.

### OFFICIAL TAX TAGS

The Division of Feed Control Service, College Station, Texas, only, is authorized by law to furnish registered manufacturers or importers official tax tags or gummed labels for use on feed in this state.

One of the principal requirements of the Texas Feed Law is that every lot or parcel of feeding stuff sold, offered or exposed for sale in this state shall have attached an official tag, the reverse side of which must bear a plainly printed statement setting forth the following: (a) Legal net weight of package; (b) Name of feeding stuff; (c) Name and address of manufacturer or importer; (d) Place of manufacture; (e) Minimum percentage of crude protein; (f) Minimum percentage of crude fat; (g) Minimum percentage of nitrogen-free extract; (h) Maximum percentage of crude fiber; (i) Names of ingredients of a mixed feed; (j) Percentage of each ingredient when adulterants are present; and (k) the percentage of each mineral added to the feed. Circular No. 106 issued by this Division contains the full text of the Texas Feed Law which will be mailed upon request. Printing on the reverse side of tags is at the purchaser's expense.

Tag printing instructions will be furnished and tags delivered to local printers when such request accompanies the order; but the Division assumes no responsibility in regard to printing cost, deliveries, or other transactions between purchasers of tags and printers. Gummed labels will be supplied in the same denominations and at the same rate as tags. If gummed labels are desired, orders must so specify; otherwise, tags will be supplied. Gummed labels cannot be furnished blank, but must be printed under the supervision of the Division for the reason that they are printed on only one side and cuts of facsimile signatures must be used.

**Cost of tags** is based upon a tax levied by law of ten cents per ton of feeding stuff. The following list may be used in determining the cost of various legal denominations of tags or gummed labels, exclusive of printing charges:

|                  | Denomination    | Cost                    |
|------------------|-----------------|-------------------------|
| 125              | pound tags..... | \$ 6.25 per M           |
| 100              | pound tags..... | 5.00 per M              |
| 75               | pound tags..... | 3.75 per M              |
| 50               | pound tags..... | 2.50 per M              |
| 25               | pound tags..... | 1.25 per M              |
| 16 $\frac{2}{3}$ | pound tags..... | .83 $\frac{1}{3}$ per M |
| 12 $\frac{1}{2}$ | pound tags..... | .62 $\frac{1}{2}$ per M |
| 10               | pound tags..... | .50 per M               |
| 8 $\frac{1}{2}$  | pound tags..... | .41 $\frac{1}{2}$ per M |
| 6 $\frac{1}{4}$  | pound tags..... | .31 $\frac{1}{4}$ per M |
| 5                | pound tags..... | .25 per M               |

Tags are packed 1,000 per box, ten boxes per shipping case. The weight of 1,000 tags is approximately five pounds. All shipments of tags and labels are F.O.B. College Station. Remittance to cover cost of tags or labels, payable to the **Division of Feed Control Service**, should accompany each order; otherwise, shipments will be made C. O. D.

**Redemption of Tax Tags.**—Tags are good until used, but when tags become obsolete for any reason, they will be redeemed by the Division of Feed Control Service at their full value less the original cost of the tags to the Division, provided they are returned by prepaid express or parcel post.

#### DEFINITIONS AND STANDARDS

The Director of the Texas Agricultural Experiment Station is empowered to adopt standards for and definitions of feeding stuffs; therefore, the registration of any feeding stuff may be refused if it does not conform to the standard and definition or if application is made under a name which is misleading as to materials of which it is composed. Registrations continue in force until revision or re-registration may be required, unless cancelled for cause.

The following will be considered as sufficient reasons for the cancellation of any registration, after ten days' notice: If a feeding stuff is

registered and then discovered to be in violation of the standard and definition adopted; the use of a brand name that is found to be misleading in any respect; the use of a feed ingredient that is found to be injurious; the incorrect labeling of a feed with regard to any ingredient; misbranding or adulteration; notice from the manufacturer that the sale of any given brand has been discontinued, and notice from the manufacturer that he has ceased to do business in Texas.

Texas Agricultural Experiment Station Circular No. 106, published December, 1944, contains the full text of definitions of and standards for commercial unmixed feeds adopted for use in this state.

**Special-Purpose Mixed Feeds.**—Standards for special-purpose mixed feeds adopted for use in this state are given in Table No. 1.

Table 1. Chemical Standards for Special-Purpose Mixed Feeds

| Name of Feed                              | Minimum Protein,<br>Per Cent | Minimum Fat,<br>Per Cent | Maximum Fiber,<br>Per Cent |
|---|------------------------------|--------------------------|----------------------------|
| Horse and Mule Feed.....                  | 9.00                         | 2.00                     | 15.00                      |
| Dairy Cow Feed.....                       | 15.00                        | 2.50                     | 15.00                      |
| Dairy Cow Ration (15% Minimum Fiber)..... | 15.00                        | 2.50                     | .....                      |
| Hog Feed or Ration.....                   | 14.00                        | 2.50                     | 8.00                       |
| Chick Scratch Feed.....                   | 9.00                         | 2.00                     | 4.00                       |
| Intermediate Scratch Feed.....            | 9.00                         | 2.00                     | 4.50                       |
| Scratch Feed.....                         | 9.00                         | 2.00                     | 5.00                       |
| Broiler Mash.....                         | 20.00                        | 3.00                     | 8.00                       |
| Broiler All-Mash.....                     | 17.00                        | 3.00                     | 8.00                       |
| Chick Starting Mash.....                  | 17.00                        | 3.00                     | 7.00                       |
| Starting All-Mash.....                    | 15.00                        | 3.00                     | 7.00                       |
| Growing Mash.....                         | 17.00                        | 3.00                     | 8.00                       |
| Growing All-Mash.....                     | 15.00                        | 3.00                     | 7.00                       |
| Starting and Growing Mash.....            | 17.00                        | 3.00                     | 7.00                       |
| Starting and Growing All-Mash.....        | 15.00                        | 3.00                     | 7.00                       |
| Laying Mash.....                          | 18.00                        | 3.00                     | 8.00                       |
| Laying All-Mash.....                      | 15.00                        | 3.00                     | 8.00                       |
| Poultry Fattening Mash.....               | 13.00                        | 3.00                     | 8.00                       |
| Turkey Starting Mash.....                 | 20.00                        | 3.00                     | 8.00                       |
| Turkey Growing Mash.....                  | 20.00                        | 3.00                     | 8.00                       |
| Turkey Starting and Growing Mash.....     | 20.00                        | 3.00                     | 8.00                       |
| Turkey Laying Mash.....                   | 20.00                        | 3.00                     | 8.00                       |
| Turkey Laying All-Mash.....               | 16.00                        | 3.00                     | 8.00                       |

**Proposed Definitions and Standards.**—The following definitions and standards are hereby proposed for future consideration and adoption.

- A. **Grain Sorghum Meal** is finely ground, unbolted meal made from kafir, milo, or any other variety of grain sorghum. If the name of the variety is given, it must be true to name.
- B. **Grain Sorghum Head Chop** is the chopped entire head of grain sorghums including grain and stems. If the name of the variety is given, it must be true to name.
- C. **Grain Sorghum Head Stems** consists of the stems of grain sorghums from which the grain has been removed.
- D. **Mash** is a combination of granular feedstuffs that is intended to be fed with scratch grain.

- E. All-Mash is a granular feed that is intended to be fed without scratch grain.
- F. Mash Supplement is a granular feed containing a higher percentage of protein, essential vitamins, and minerals than regular mash. It is to be fed or blended with more grain than is used with a regular mash.
- G. Mash Pelleted is mash which has been made into pellets.
- H. All-Mash Pelleted is all-mash which has been made into pellets.
- I. 41 Per Cent Protein Peanut Meal is the product from the kernels of sound peanuts, free from excess of hulls and other foreign materials. Standard: It must be of sweet odor, and contain not less than 41 per cent of protein and not more than 14 per cent of crude fiber.
- J. The chemical standard for Pig Feed or Ration is not less than 16 per cent protein and 2.50 per cent fat and not more than 6 per cent of crude fiber.

### COOPERATIVE RESEARCH PROJECTS

Results of some of the work on the cooperative research projects are presented on the following pages. They include the carotene in alfalfa meals and other feeds; salt and calcium carbonate in mixed feeds; the hardness of cottonseed cake, and samples tested for poisons or other harmful substances.

Allotments of funds of the Division of Feed Control Service for research projects to assist in proper and adequate administration of the Texas Feed Law have been made to the following Divisions of the Texas Agricultural Experiment Station:

Division of Veterinary Science

Testing Manufactured Feed Samples for Poisons or Other Harmful Substances

Poultry Disease Investigation

Division of Farm and Ranch Economics in Cooperation with Substation No. 20

Land Use Adjustment in the West Cross Timbers Region

The Effect of Practices Followed by Producers, Buyers, Distributors, and Consumers Upon Market Returns to Turkey Producers

Division of Chemistry

Chemical Analyses and Investigations of Commercial Feeds

Vitamins in Commercial Feeds

Division of Agricultural Engineering

The Drying of Grain Sorghum, Hay, and Other Farm Crops

Division of Dairy Husbandry in Cooperation with the Department of Dairy Husbandry, A. & M. College

High Versus Low Protein Rations for Lactating Dairy Cows

## Division of Swine Husbandry

A Study of Amino Acids in Cottonseed and Cottonseed Meal

## Division of Poultry Husbandry

Quality in Turkeys as Affected by Nutrition, Environment and Breeding

Protein Requirements for Chick Rations

Pullet Development Rations, Particularly as Differentiated from Brooder Rations

The Factors in Feeds of Animal Origin Affecting the Stability of Carotene

**ESTIMATED TONNAGE OF FEEDING STUFFS SOLD IN TEXAS  
1906-1945**

Table 2 shows the estimated tonnage of feed sold in Texas yearly during the past thirty-nine years as computed from the sale of tax tags, assuming that all the tags sold during the period covered by this report are used for feeds sold during that period. It is impossible to give complete data

Table 2. Estimated Tonnage of Feeding Stuffs Sold in Texas, 1906-1945

| Years      | Tons      |
|------------|-----------|
| 1906-1907. | 485,805   |
| 1907-1908. | 511,661   |
| 1908-1909. | 532,792   |
| 1909-1910. | 755,488   |
| 1910-1911. | 820,277   |
| 1911-1912. | 972,340   |
| 1912-1913. | 680,259   |
| 1913-1914. | 847,716   |
| 1914-1915. | 881,136   |
| 1915-1916. | 778,137   |
| 1916-1917. | 974,608   |
| 1917-1918. | 1,155,055 |
| 1918-1919. | 945,864   |
| 1919-1920. | 754,349   |
| 1920-1921. | 762,769   |
| 1921-1922. | 735,319   |
| 1922-1923. | 932,473   |
| 1923-1924. | 1,009,047 |
| 1924-1925. | 1,015,742 |
| 1925-1926. | 1,119,561 |
| 1926-1927. | 1,181,538 |
| 1927-1928. | 1,226,882 |
| 1928-1929. | 1,370,120 |
| 1929-1930. | 1,434,966 |
| 1930-1931. | 1,112,302 |
| 1931-1932. | 1,093,307 |
| 1932-1933. | 1,057,533 |
| 1933-1934. | 1,235,172 |
| 1934-1935. | 1,298,743 |
| 1935-1936. | 1,210,790 |
| 1936-1937. | 1,443,552 |
| 1937-1938. | 1,542,833 |
| 1938-1939. | 1,697,189 |
| 1939-1940. | 1,705,552 |
| 1940-1941. | 1,814,092 |
| 1941-1942. | 2,268,539 |
| 1942-1943. | 3,328,005 |
| 1943-1944. | 3,314,368 |
| 1944-1945. | 3,178,266 |

on the number of tons of the various classes of feeds sold for consumption in Texas, owing to the fact that some manufacturers purchase blank tax tags and are not required to report the various classes of feeds upon which these tags are used. The figures given in this table represent only the tonnage of commercial feeding stuffs regulated by the Texas Feed Law and do not include whole grains. The figure for 1944-45 also does not include feed ingredients brought into the State for use in the manufacture of mixed feeds.

## VIOLATIONS

Fifty-four State cases were developed during the year against manufacturers and distributors selling feed in violation of one or more provisions of the Texas Feed Law. Thirty-seven of these cases resulted in convictions, and fines were paid; thirteen cases were dismissed; and four are pending. In addition to the State cases developed, eleven complaints were forwarded to the Federal Food and Drug Administration, alleging shipment of violative feed in interstate traffic. Two of these cases were disposed of by seizure and citation; nine are pending.

Eight hundred and thirty-two minor violations were corrected by inspectors of this Division and through correspondence, without court action. These complaints were based on untagged feed, improperly labeled feed, short weight, and other irregularities.

**Poisonous Feeds.**—The Division has made thirty-five investigations of complaints by feeders, alleging the presence of poisons in feed. Three of these complaints were investigated by inspectors on the purchasers' premises; four samples of poultry feeds were fed to chickens of proper age under the direction of R. M. Sherwood, Chief, Division of Poultry Husbandry; one sample of stock feed was fed to proper animals under the direction of Dr. H. Schmidt, Chief, Division of Veterinary Science; and two samples were fed to proper animals under the direction of Fred Hale, Chief, Division of Swine Husbandry. In all cases tests were made under close supervision. All tests proved negative for traces of poisonous or other harmful substances, except in cases of excessive amounts of salt.

NOTE: Samples of feed suspected of containing poison or other injurious substances should not be sent to this Division without specific instructions. Full details should be given the Division in first communication.

**Shipments Withdrawn From Sale.**—All dealers are advised to withhold from sale lots of feed which are untagged and which do not conform to the requirements of the Texas Feed Law, until such time when they can be legally sold. The dealer is directly responsible if feed in his possession fails to meet the requirements of the law. The dealer should voluntarily withdraw from sale all untagged shipments and those which he knows or has good reason to believe are adulterated or misbranded and then write to the Division of Feed Control Service for instructions.

Lots or parcels of untagged feeding stuff found by the inspectors were required to be labeled with tags furnished by the manufacturers. Im-

properly labeled lots were relabeled with official tags properly printed, or with tags showing guaranties that could be maintained, and, in still other cases, shipments were returned to the manufacturer.

Table 3 shows the summary of the feeds withdrawn from sale during the year ended August 31, 1945, and gives the number of shipments withdrawn, the amounts, and the special reasons for their withdrawal from sale. It also shows the number of manufacturers represented. The amount withdrawn from sale was about one-tenth of one per cent of the estimated tonnage sold during the year. These records indicate a decided uptrend in the number of lots of untagged feed found as compared to previous records.

Table 3. Shipments Withdrawn from Sale, 1944-45

| No. of Shipments Withdrawn from Sale | No. of Manufacturers Represented | Reasons for Withdrawal from Sale         | Amount Withdrawn, Tons |
|--------------------------------------|----------------------------------|--|------------------------|
| 665                                  | 227                              | Not tagged.....                          | 2,698.28               |
| 34                                   | 29                               | Wrong tags attached.....                 | 102.80                 |
| 35                                   | 25                               | Incorrectly printed tags attached.....   | 83.35                  |
| 24                                   | 11                               | Not registered and not tagged.....       | 116.40                 |
| 5                                    | 3                                | Short weight.....                        | 16.10                  |
| 1                                    | 1                                | Obsolete tags.....                       | 0.50                   |
| 13                                   | 12                               | Blank tags attached.....                 | 113.50                 |
| 13                                   | 10                               | Defaced tags attached.....               | 83.40                  |
| 39                                   | 23                               | Tags of wrong denomination attached..... | 31.70                  |
| 3                                    | 3                                | Not tagged and illegal weight.....       | 62.50                  |
| 832                                  | 344                              | Total.....                               | 3,308.53               |

## AVERAGE COMPOSITION OF FEEDING STUFFS ANALYZED

Table 4 shows the average composition of many feeding stuffs analyzed during the past year. The analyses of mixed and of proprietary feeds are not included in this table.

Table 4. Average Composition of Feeding Stuffs Analyzed During the Year 1944-45

| No. of Samples | Name of Feed                               | Crude Protein, Per Cent | Crude Fat, Per Cent | Crude Fiber, Per Cent | Nitrogen-free Extract, Per Cent | Moisture, Per Cent | Crude Ash, Per Cent |
|----------------|--|-------------------------|---------------------|-----------------------|---------------------------------|--------------------|---------------------|
| 9              | Alfalfa Leaf Meal.....                     | 19.66                   | 3.48                | 20.19                 | 37.01                           | 7.51               | 12.15               |
| 20             | Alfalfa Meal.....                          | 15.79                   | 2.33                | 26.06                 | 37.16                           | 8.50               | 10.16               |
| 1              | Alfalfa Stem Meal.....                     | 12.05                   | 1.58                | 31.11                 | 37.22                           | 10.94              | 7.10                |
| 12             | Barley, Whole (Chopped, Ground, etc.)..... | 11.74                   | 2.14                | 7.24                  | 64.20                           | 11.32              | 3.36                |

## DIGESTIBLE PROTEIN AND PRODUCTIVE ENERGY OF FEEDS

The digestible protein represents that portion of the feed which can be used for the repair or formation of flesh or nitrogenous body constituents or for the formation of nitrogenous materials in milk or eggs and for energy. The productive energy represents that portion of the feed which is available for the purpose of furnishing heat to the animal or energy for life processes and work; it also furnishes material for the production of the constituents of milk, eggs, or fat. The productive energy

represents the net value of the feed for energy for ruminants after all losses involved in digestion and assimilation have been allowed for. The digestible protein and productive energy, therefore, are the two best indicators of the productive value of a feed.

The digestible protein and productive energy of feeds of average composition shown in Table 4 are given for ruminants in Table 5. The method of obtaining these figures is described fully in Bulletins Nos. 329, 372, 402, 436, and 461 of this Station.

**Table 5. Digestible Protein and Productive Energy of Feeds for Ruminants Calculated from Average Analyses Shown in Table 4\***

| Number<br>Averaged | Name of Feed                                       | Digestible<br>Protein,<br>Per Cent | Productive<br>Energy,<br>Therms<br>in<br>100 lbs. |

### CAROTENE IN FEEDS

Vitamin A potency in feeds may be supplied by vitamin A as such, which occurs as a colorless compound in fish oils, by carotene, which occurs as a yellow compound in alfalfa products and other green feeds, or by cryptoxanthin and carotene, which occur in yellow corn. The most important sources of vitamin A potency are carotene in green colored feeds and cryptoxanthin and carotene in yellow corn. To the feeder of livestock, a vitamin A deficiency means less gain in weight per pound of feed, more sick animals, greater mortality, and a lower grade of finished product. This results, of course, in a lower profit, or even a loss. Dairy cattle, sheep, and beef cattle secure most of their needed carotene from green plants or roughages, but poultry and hogs, if they do not have access to green feed, are dependent on the feed furnished them. It is important, therefore, to know what commercial feeds are high in carotene and what feeds are deficient.

During the past year an investigation of the carotene content of a few feeds on the Texas market has been continued under the direction of Dr. G. S. Fraps, Chief, Division of Chemistry, and the results are shown in Table 6. Wide differences are seen in the carotene content of the feed studied.

**HARDNESS OF COTTONSEED CAKE AND PELLETS**

The force required to crush cottonseed cake between flat surfaces has been adopted as the best method of testing cake to ascertain its hardness. Tentatively, cracked cake with a crushing strength of 400 pounds or less is classed as soft; cake with a crushing strength of 401 to 1,500 pounds is classed as medium hard; cake with a crushing strength of 1,501 to 2,500 pounds is classed as hard, and that with a crushing strength of over 2,500 pounds is classed as very hard. This classification refers to the nut-size cottonseed cake, cubes, and pellets as sold for feeding purposes. Texas Agricultural Experiment Station Bulletin No. 534—Factors Which May Affect the Hardness of Cottonseed Cake—contains descriptions of the methods employed in testing the hardness of cottonseed cake and pellets.

During the past year twenty-nine samples have been tested for hardness by the Division of Chemistry under the direction of Dr. G. S. Fraps, Chief, and the results appear in Table 7.

## CARBONATE OF LIME AND SALT IN MIXED FEEDS

Many feeds of a mixed nature are registered to contain certain percentages of ground limestone, ground oyster shell, or some other material as a source of carbonate of lime, and salt. Determinations of the percentages of salt and carbonate of lime in a number of the inspection samples of mixed feeds show that the guarantees were not met in all cases. Some samples contained more salt and lime carrier than guaranteed, while others contained less, indicating failure to follow the formulas or lack of uniformity in mixing the ingredients.

During the period covered by this report the Division of Chemistry made 1,123 quantitative determinations of salt and 1,114 quantitative determinations of carbonate of lime in mixed feeds. Those shipments containing appreciable deficiencies or excesses were reported to the manufacturers.

Table 8 shows that 66.7% of the samples examined for lime carrier and 52.6% of the samples examined for salt did not contain the correct amount of limestone, oyster shell, or carbonate of lime, or salt as guaranteed to be present.

Manufacturers are advised to follow their formulas as registered and take the necessary steps to insure proper mixing of all ingredients before sales are made. Carelessness in this respect sometimes results in poor gains or actual losses. An excessive amount of salt is dangerous, especially for young turkeys.

**Table 8. Summary of Carbonate of Lime and Salt Determinations**

| Year    | Ingredients  | Number Samples Examined | Number Samples Deficient | Number Samples with Excess | Per Cent  |             |
|---------|--|-------------------------|--------------------------|----------------------------|-----------|-------------|
|         |  |                         |                          |                            | Deficient | With Excess |
| 1943-44 | Limestone, Oyster Shell, or Calcium Carbonate      | 852                     | 382                      | 131                        | 44.8      | 15.4        |
| 1944-45 | Limestone, Oyster Shell, or Calcium Carbonate..... | 1114                    | 515                      | 228                        | 46.2      | 20.5        |

| 1944-45 | Salt.....  | 1123                    | 172                      | 419                        | 15.3      | 37.3        |

## RESULTS OF ANALYSES

Tables 9 and 10 contain detailed reports on the results of analyses of feeds inspected during the year ended August 31, 1945. In these tables will be found the analyses of all official samples taken by inspectors of this Division together with the analyses of samples of feed sent in by manufacturers during the year. A careful study of the information contained in these tables will enable purchasers of feeding stuffs to make selections on the basis of quality.

The footnotes at the bottom of the pages refer to matters of importance in connection with the feeds designated, and we advise that they be carefully considered.
