Digest

This is the 49th annual fertilizer bulletin. It contains information regarding the Texas fertilizer law, statistics concerning the sale of fertilizer during the 1950-51 season and analysis of 1,816 official samples of fertilizers sold by different manufacturers.

Fertilizer inspection fees equivalent to 598,274 tons of fertilizers were collected for fertilizers sold in Texas during the period from September 1, 1950 through August 31, 1951. This tonnage was about 11 percent higher than that sold in 1949-50. The 5-10-5 and 4-12-4 grades accounted for about three-fourths of the mixed goods sold. Superphosphate (20 percent) accounted for about half of the fertilizer materials sold.

Tables are given which compare the valuations of the fertilizers sold by different manufacturers, as based upon actual analysis of official samples, with guaranteed valuations and selling prices, and show the extent to which the various fertilizer manufacturers met or exceeded their guarantees.

Analyses of Commercial Fertilizers Sold during 1950-51

J. F. FUDGE, State Chemist, and T. L. OGIER, Associate State Chemist

THIS IS THE 49th annual fertilizer bulletin published in compliance with the Texas fertilizer law, which requires that the State Chemist shall issue at least one bulletin annually setting forth the analyses of fertilizers made under the provisions of the fertilizer law, the operations of the law, and other information pertaining to the sale of fertilizer in Texas.

SOME REQUIREMENTS OF THE TEXAS FERTILIZER LAW

The law governing the sale of commercial fertilizers in Texas is found in Chapter Twelve of Title Nineteen of the Revised Criminal Statutes, 1925, and in Chapter Five of Title Four of Texas Civil Statutes, 1925. A summary of some important requirements of the law is given below. For further requirements, penalties, definitions and other detailed information, reference should be made to the full text of the law. Copies of the law will be furnished by the State Chemist upon request.

Materials covered by the law. All mixed fertilizers, fertilizer materials and all other substances which have or are claimed to have a beneficial effect on the soil or to promote the growth of crops, come under the law, with the exception of lime, limestone, marl, agricultural gypsum, unground bones, stockpen manure, barnyard manure, and the excrement of any domestic animal in case that said manure or excrement has not been dried or manipulated or otherwise treated, or is not claimed to have a value of more than \$4.00 a ton. Agricultural gypsum was added to the list of exempted products by Senate Bill 42, effective February 28, 1951.

Registration. Before a fertilizer is offered for sale in Texas, it must be registered with the State Chemist of Texas. All registrations expire on August 31 of each year, and new applications for registration must be submitted for each year. Application blanks for registration are furnished by the State Chemist, College Station, Texas, upon request. The applica-

tion blank must be filled out and sent to the State Chemist together with a copy of the printed bag or tag to be used. Such a bag or tag must meet the requirements of the fertilizer law. Wording on the application for registration must agree exactly with the wording on the printed bag or tag, and no change may be made in the wording on the bag or tag after it has been registered. Any such change requires a new registration.

The application for registration must state all of the materials used in the fertilizer, including the filler or conditioner, and these materials must be used in all batches. A change may be made only if the change meets the requirements of the law and the State Chemist is notified.

No brand name identical with or so similar to a brand name previously registered by another manufacturer as to lead to confusion can be accepted. No name which is misleading as to the ingredients of the fertilizer can be accepted. The grade of mixed fertilizers should be part of the brand name; for example, Jupiter Brand 20 Percent Superphosphate or Mars Brand 5-10-5 Fertilizer.

Labels. The law requires the following information to be printed on the bag or on a tag attached to the bag:

Net weight of content of the bag.

Name of fertilizer in full.

Name and address of manufacturer, manipulator or guarantor.

Guaranteed analysis (in the order given below):

Nitrogen, percent

Available phosphoric acid, percent

Potash, percent

Nitrogen refers to the total nitrogen (N) present. Such terms as "ammonia" or "equivalent to ammonia" cannot be used.

Available phosphoric acid (P_2O_5) must be guaranteed in all mixed fertilizers and in all fertilizer materials, with the following exceptions. Total phosphoric acid may be guaranteed in bone meal, tankage or other similar product, but where this is done, no guarantee of available phosphoric acid can be used. If it is desired to claim available phosphoric acid only, the guarantee must take the form set forth above.

Potash (K_2O) refers to potash soluble in distilled water. No other guarantee or term can be used.

Inspection fees. To finance the inspection of fertilizers and the collection and analysis of official samples of fertilizer,

experiments relative to the value of fertilizers, and for certain other purposes, the law imposes an inspection fee of 25 cents per ton upon all fertilizers sold or offered for sale in Texas. This fertilizer inspection fee must be paid on the basis of and accompany sworn quarterly statements of sales, due in the office of the State Chemist on the first day of September, December, March and June.

Bulk sales. Fertilizer in bulk for manufacturing purposes can be shipped only to the factory of a manufacturer who has registered fertilizer for sale in Texas.

Fertilizer in bulk cannot be sold to dealers for resale or distribution.

Registered fertilizers may be sold in bulk by manufacturers to persons, individuals or firms for their own use on their own lands, but not for resale or distribution, under rules prescribed by the State Chemist. The inspection fee must be paid upon all such sales. All authorizations to sell fertilizer in bulk expire August 31 of each year.

Report of sales. The guarantor must mail a report of each sale or shipment of fertilizer within or into Texas to the State Chemist within 3 days after such sale or shipment. The report must be made by sending to the State Chemist a copy of the invoice used in billing the customer. The invoices must be numbered, and the same number cannot be used twice during the same year. Reports of sales in bulk to manufacturers must be marked "for manufacturing purposes." Reports of sales in bulk to individuals for their own land must be marked "bulk sale to consumer."

FERTILIZER GRADES APPROVED FOR 1951-52

The grade of a mixed fertilizer is stated in numbers representing the guaranteed analysis as percentages of total nitrogen, available phosphoric acid and water-soluble potash. For example, a grade of 5-10-5 means that the fertilizer is guaranteed by the manufacturer to contain 5 percent total nitrogen, 10 percent available phosphoric acid and 5 percent water-soluble potash. Fertilizers are frequently referred to by these numbers, which form a short and accurate description of the fertilizer. The term grade may also refer to the percentage of a constituent in a fertilizer material, as in 20 percent superphosphate. Wherever practicable, the grade of a fertilizer or fertilizer material should be included as part of the full name of the fertilizer required on the bag or tag.

Fertilizers may also be described by a numerical statement expressing the relation among the principal constituents in its simplest form, called a ratio. For example, a 5-10-5 fertilizer contains 1 part of nitrogen to 2 parts of available phosphoric acid and to 1 part of potash. Consequently, this fertilizer has a 1-2-1 ratio; other grades having this ratio are 6-12-6, 10-20-10 and 12-24-12.

The grades of mixed farm fertilizers sold in Texas have been limited in number for nearly 30 years. Limitation and standardization of grades reduce the cost of manufacturing and handling, thereby permitting the fertilizer to be sold to the consumer at a lower cost. They also assist the farmer to become familiar with the different grades of fertilizer, enable him to decide more readily on the proper grade to be used and enable the agricultural specialist to make definite recommendations. The grades of mixed farm fertilizers to be approved in Texas during a given year are decided upon by the Texas Fertilizer Committee after a public hearing at which manufacturers and others interested may present recommendations. This public hearing is held in cooperation with fertilizer control officials, agricultural specialists and manufacturers of Texas, Louisiana, Arkansas, Oklahoma and New Mexico. The list of approved grades is published in the annual fertilizer bulletin and may also be obtained upon request to the State Chemist.

Following the annual public hearing on grades held at Galveston July 20, 1951, the Texas Fertilizer Committee approved the following ratios and minimum grades for use in Texas during the year beginning September 1, 1951:

Ratio approved	Minimum grade	Ratio approved	Minimum grade	Ratio approved	Minimum grade
0-1-1	0-12-12	1-2-2	5-10-10	2-2-1	10-10-5
0-2-1	0-14-7	1-2-3	4- 8-12	3-2-0	12- 8-0
1-1-0	10-10-0	1-3-1	4-12-4	3-4-6	6- 8-12
1-1-1	8- 8-8	1-3-2	4-12-8	3-5-2	6-10-4
1-2-0	7-14-0	1-4-4	3-12-12		
1-2-1	5-10-5	2-1-1	10- 5-5		

Grades of mixed goods of the same ratios as those above but of higher guaranteed analyses were also approved. For example a 12-24-12 would be approved as a higher analysis of the 1-2-1 ratio.

All materials were approved. A few grades, such as 4-16-0 (ammoniated superphosphate), 12-15-0, 16-20-0, 11-48-0 and 13-39-0 (ammonium phosphates) are approved as materials.

THE TEXAS FERTILIZER COMMITTEE

The Texas Fertilizer Committee, composed of agricultural subject-matter specialists of the Texas Agricultural and Mechanical College System and representatives of the United States Department of Agriculture, is appointed by the Director of the Texas Agricultural Experiment Station to advise and assist the State Chemist in the discharge of certain of his duties, particularly with respect to ratios and grades of mixed fertilizer to be approved for registration during the coming year. This committee is composed of the following individuals:

TEXAS FERTILIZER COMMITTEE

J. F. Fudge, State Chemist, Chairman
 J. E. Adams, Head, Department of Agronomy
 G. W. Adriance, Head, Department of Horticulture
 F. R. Brison, Professor of Horticulture
 J. E. Hutchison, Extension Horticulturist
 E. A. Miller, Extension Agronomist
 O. J. Moss, Production and Marketing Administration,
 U. S. Department of Agriculture
 E. B. Reynolds, Professor of Agronomy
 M. K. Thornton, Extension Agricultural Chemist

BRANDS AND TRADE-MARKS REGISTERED

The law requires the State Chemist to publish annually a list of brands or trade-marks registered with him. The following is a list of brands and trade-marks registered with the State Chemist during 1950-51:

Advance	Boostaplant	Es-Min-El	K-W
Aero	Brimm	Farmers	La-Tex
Aero-Phos	Blumes	Fertilene	Lawn-Chem
Agco	Burbank	Ferti-Lome	Life
Agri-Chem	C.C.	Fertil-Spra	Lion
AleXite	C.C.I.	Fidelity	Liqua-Vita
All Crop	Cal-Nitro	Ford	Loma
All-Weather	Capitol	Fourleaf	Lone Star
Ammo-Phos	Champion	Garden Master	Lonfesco
Aqua-Vita	Chief	G & O	Longhorn
Arcadian	Chilean	Goldenrod	Marco
Armstrong's	Clark's	Green Valley	Marshall
Prescription	Collosfos	Gro-Crop	Mathieson
Arrow	Co-op	Gro-more	Maverick
Atlas	Crop-Ade	Gro-Nure	Min-Coll
Bactex	Cross Country	Heart	Min-Sol
Bem	Davco	Heart of Texas	Milorganite
Ben Franklin	Davey Tree Food	Hi-Yield	Mission
Best	Dogie Pickup	Hoseco	Mule
Best Bet	Double Circle	Hou-Actinite	Na-Churs
Big Crop	Driconure	Hy-Gro	Niagara
Blackland Booster	DuPont Uramon	Hyponex	N J
Blenn	Easy Going	International	Nugreen
Bonro	Etco	Interstate	Old Black Joe

Ormico	Schrock Hi Test	SSS	Twin Rose
Ortho	Se-Bo-Phos	Star	Valley
Ovene	Silver Tip	Stauffer's	Valley Gro
Owl	Shur-Gro	Sul-Po-Mag	Valley Port
Pabak	Smith Big Yield	Sul-Tech	V-C
Page	Smith	T.C.C.	Vertagreen
Phillips 66	Commander	Terra Food	VHPF
Plantabbs	Smith Gro-Grain	Terra Lite	Vigoro
Plant-Chem	Smith Gro-Green	Terra-Sul	Viking Ship
Rab-bit	Smith	Texas	Vita-Gro
Ra-Pid-Gro	Square Deal	Green Acres	Weber-King
Red Seal	Smith Money	Texas Liquid	Wesco
Red Star	Maker	Texas Longhorn	Western
Red Steer	Smith Nitro-Phos	Thorobred	Westex
Red Tomato	Smith Top Notch	Thorogro	White Diamond
Reliance	Soil Booster	Three Star	Winter Garden
Robin	Soil Prescription	Top Crop	Wizard
Sasco	Soil-Sul	Topper	Wolf
Scott's	Soylaid	Triangle	

INSPECTION FEES COLLECTED DURING 1950-51

Fertilizer inspection fees equivalent to 598,274 tons of fertilizer were collected for fertilizer sold during the Texas fiscal year from September 1, 1950 through August 31, 1951. This tonnage is compared in Table 1 with tonnages sold during other periods.

Fees collected for the 1950-51 period were about 11 percent higher than for 1949-50. The tonnage sold during the current year was double that sold 5 years ago.

All fees collected are used for the administration of the fertilizer law and for research on the agricultural value of commercial fertilizers.

Table 1. Fertilizer inspection fees collected, calculated on a tonnage basis, during different periods (September 1 of one year through August 31 of next year)

Year	Tonnage equivalent
1905-06	13,500
1910-18 (8-year average)	48,861
1918-23 (5-year average)	44,770
1923-28 (5-year average)	112,927
1928-33 (5-year average)	90,962
1933-38 (5-year average)	66,255
1938-43 (5-year average)	125,678
1943-44	196,877
1944-45	217,760
1945-46	305,510
1946-47	401,297
1947-48	451,132
1948-49	492,541
1949-50	545,899
1950-51	598,274

TONNAGE SALES OF DIFFERENT GRADES OF FERTILIZERS

The tonnage sales of different grades of mixed fertilizers and fertilizer materials from July 1 through December 31, 1950, from January 1 through June 30, 1951 and the total for the two 6-months periods, are given in Table 2. These periods, rather than those based on the Texas fiscal year, are used because they are in accord with the periods almost universally used by fertilizer manufacturers, by the U. S. Department of Agriculture and by many states, and are those recommended by the Committee on Fertilizer Grades and Ratios of the American Society of Agronomy to provide a uniform basis for estimating the needs of the fertilizer industry in the United States. The tonnages were compiled from current report of sales of fertilizers required by law to be sent to the State Chemist by fertilizer guarantors within 3 days after sale.

Table 2. Tonnages of principal mixed goods and materials sold from July 1, 1950 through June 30, 1951, as reported currently by guarantors

Grades	July 1, to Dec. 31, 1950	Jan. 1, to June 30, 1951	Total tonnage	
			Actual	Relative 1949-50 = 100
Mixed goods				
0-14-7	65,013	217,141	282,154	111
4-12-4	29,092	8,338	37,430	146
Higher 1-3-1 grades	5,793	36,119	41,912	72
5-10-5	987	2,875	3,862	424
6-12-6	18,511	118,135	136,646	105
Higher 1-2-1 grades	1,327	5,444	6,771	None
6-10-4, 6-12-4	2,435	8,445	10,880	267
10-10-0 and higher	3,087	8,787	11,874	120
10-10-5 and higher	698	6,351	7,049	238
8-8-8 and higher	158	1,030	1,188	382
5-10-10 and higher	1,326	15,351	16,677	236
7-14-0 and higher	276	2,175	2,451	33
Materials	348	1,700	2,048	90
Anhydrous ammonia	196,833	130,167	327,000	109
Ammonium nitrate	411	3,482	3,893	947
Ammonium sulfate	5,696	16,413	22,109	117
Ammonium phosphates	4,403	10,577	14,980	282
Nitrate of soda	21,142	37,073	58,215	150
Other nitrogen materials	692	2,071	2,763	135
Superphosphates, normal	1,464	2,502	3,966	68
Superphosphates, concentrated	126,517	21,602	148,119	84
Unacidulated phosphates	12,333	11,506	23,889	92
Potash materials	18,377	21,166	39,543	238
Manures	1,038	668	1,706	212
Total fertilizer	904	1,270	2,174	113
	261,846	347,308	609,154	110

Mixed goods sales were 11 percent higher than a year ago and accounted for about one-fourth of the fertilizers sold in the fall, two-thirds of those sold in the spring and nearly half of those sold during the entire year. Grades of the 1-2-1

ratio (5-10-5 and higher) accounted for 55 percent, the 1-3-1 ratio (4-12-4 and higher) for 16 percent, and the 1-1-1 ratio (8-8-8 and higher) for 6 percent of the mixed goods sold. These three ratios thus accounted for over three-fourths of the mixed goods sold, although 16 ratios were approved by the Texas Fertilizer Committee. Significant increases occurred in sales of the 1-1-0, 1-1-1 and 2-2-1 ratios; decreases occurred in the 1-2-0, 1-2-2 and 1-3-1 ratios. One of the most significant trends shown in Table 2 is the marked increase in sales of grades of higher analyses than the minimum grades approved.

The tonnage of materials sold was 9 percent higher than a year ago. Normal superphosphate (20 percent) accounted for nearly half of the materials sold; over 85 percent of this tonnage was sold in the fall. Sales of ammonium phosphates, such as 16-20-0, 11-48-0 and 13-39-0, were second only to those of superphosphate. Sales of all nitrogen materials were much higher than a year ago. For the first time, anhydrous ammonia was an important nitrogen material in Texas.

Distribution of sales of the principal grades and materials by months is shown in Table 3. In this table, the quantity of a particular grade or material sold in a given month is expressed as a percentage of the total quantity sold during the entire year. About three-fourths of the 0-2-1 grades, principally the 0-14-7 grade, and of the superphosphates were sold during September, October and November. On the other hand, about three-fourths of the principal mixed grades and half of the ammonium materials were sold during the four-months period from January through April.

Table 3. Distribution of sales of principal grades and materials by months, expressed as percentages of total sold during the year

Month	0-2-1 grades	1-3-1 grades	1-2-1 grades	1-1-1 grades	Ammonium nitrate	Ammonium sulfate	Ammonium phosphates	Super- phosphates
July	0.4	1.2	1.1	0.3	9.3	4.2	5.5	2.8
August	3.0	1.1	0.9	0.3	5.1	6.3	4.5	6.0
September	17.6	1.8	1.8	1.0	3.7	3.8	2.8	20.6
October	35.0	2.0	2.3	0.8	3.2	4.4	7.4	29.5
November	17.5	1.7	1.7	0.6	3.6	5.4	7.3	13.2
December	4.2	6.8	6.1	4.8	7.3	6.7	7.5	7.0
January	4.1	17.6	16.1	14.9	16.5	9.5	11.6	2.5
February	3.7	15.3	14.4	15.9	12.2	6.8	9.3	5.2
March	8.8	24.1	26.4	31.8	12.3	9.3	12.4	6.8
April	4.0	13.4	15.5	16.9	12.3	17.6	10.8	2.6
May	1.4	12.2	11.1	10.5	8.9	16.6	12.0	1.8
June	0.3	3.2	2.6	2.2	5.6	9.4	8.9	2.0

Tables 2 and 3 emphasize the desirability of early purchase of fertilizers where such action is practicable. The mixing of commercial fertilizers requires a large investment in equipment and much labor. Restricted seasonal use of this equipment and labor is economically unsound. Furthermore, the demand for fertilizers during the past several years has been considerably greater than the supply. Improvement in time distribution of sales would make possible the manufacture of a much larger tonnage of fertilizer without additional expenditure for equipment or labor, which in turn would result in a lower cost per ton of fertilizer to the farmer.

The tonnages of the principal fertilizer components sold during the year, calculated from the current reports of guarantors and the guaranteed analyses, are shown in Table 4. Sales in the fall accounted for 23 percent of the nitrogen, 51 percent of the available phosphoric acid and 28 percent of the potash used during the entire year. Stated in another way, sales of nitrogen and of potash were three times as great in the spring as they were in the fall, while sales of available phosphoric acid were evenly distributed between the two periods. Mixed goods supplied 37 percent of the nitrogen, 38 percent of the available phosphoric acid and 94 percent of the potash. The average over-all composition showed significant increases in nitrogen and potash and a slight decrease in available phosphoric acid. Giving a comparative value of 1 to nitrogen, the average ratio this year was 1.00-2.24-0.43, as compared with 1.00-2.78-0.41 a year ago. The trend toward narrowing the ratio between nitrogen and available phosphoric acid is a desirable one for many of our crops and soils.

Table 4. Primary fertilizer components sold between July 1, 1950 and June 30, 1951, as reported currently by guarantors and calculated from the guaranteed analyses

Components	July 1, to Dec. 31, 1950	Jan. 1, to June 30, 1951	Total tonnage	
			Actual	Relative 1949-50 = 100
Nitrogen, tons				
In mixed goods	2,092	11,926	14,018	113
In materials	6,818	17,346	24,164	156
Total	8,910	29,272	38,282	137
Available phosphoric acid, tons				
In mixed goods	8,259	24,317	32,576	148
In materials	35,749	17,223	52,972	96
Total	44,008	41,540	85,548	110
Soluble potash, tons				
In mixed goods	4,057	11,587	15,644	143
In materials	582	385	967	209
Total	4,639	11,972	16,611	145
Average over-all composition, percent				
Nitrogen	3.40	8.43	6.28	119
Available phosphoric acid	16.84	11.96	14.04	96
Potash	1.77	3.44	2.73	126
Total	22.01	23.83	23.05	104

VALUATION PER TON

The Texas fertilizer law requires that a refund be made to all purchasers of fertilizer if the valuation found on analysis is 4 percent or more below the valuation guaranteed, and that if the valuation found is 10 percent or more below the valuation, the fertilizer shall be considered as being adulterated. The rebate must be paid by the guarantor to the dealer and by the dealer to the individual purchasers of the lot of fertilizer concerned. A calculation of the guaranteed valuation and of the valuation found by analysis must, therefore, be made. The valuation also sums up the valuation of the three principal constituents (nitrogen, available phosphoric acid and soluble potash) shown in the guarantee or found in the analysis, into a single figure which is convenient for comparative purposes.

The calculation of the valuation requires a specific valuation for each of the three constituents. The following prices per pound and per unit (1 percent of a ton, or 20 pounds) were used for this calculation in 1950-51:

	Prices per pound	Prices per unit
Nitrogen	\$.15	\$3.00
Available phosphoric acid05	1.00
Total phosphoric acid in tankage and bone meal04	.80
Total phosphoric acid in rock phosphate02	.40
Soluble potash05	1.00

The valuation is calculated by multiplying the percentage of each constituent by the valuation per unit, and adding the products. The following is an example of the calculation of the valuation of a ton of a 5-10-5 fertilizer:

Nitrogen	$5 \times \$3.00 = \15.00
Available phosphoric acid	$10 \times 1.00 = 10.00$
Soluble potash	$5 \times 1.00 = 5.00$
 Guaranteed valuation.....	 \$30.00

The valuation guaranteed and the valuation found are used for comparative purposes in a number of the following tables.

COMPOSITION AND SELLING PRICE OF DIFFERENT GRADES OF FERTILIZERS

The average composition, the guaranteed valuation, the valuation found by analysis and the average retail selling price per ton of various grades of fertilizers are shown in

Table 5. The average retail selling price is the average of the cash retail prices furnished to the fertilizer inspectors by the dealers. The prices of the same fertilizer may vary between towns on account of differences in cost of transportation or for other causes. The retail price includes handling costs, carrying charges and the dealer's profit, as well as the wholesale cost of the materials from which the fertilizer is made, and from which the valuations guaranteed and found are calculated.

Table 5. Average composition, valuations and selling prices of various grades of fertilizers, 1950-51

Grades	Number averaged	Nitrogen percent	Available phosphoric-acid, percent	Potash percent	Valuation guaranteed per ton	Valuation found per ton	Selling price per ton
0-14-7	30	0	14.49	7.09	\$21.00	\$21.58	\$32.58
3-12-12	7	3.23	12.32	11.70	33.00	33.71	42.45
4-12-4	326	4.17	12.34	4.40	28.00	29.25	42.64
5-10-5	668	5.03	10.63	5.31	30.00	31.03	44.44
5-10-10	14	5.01	10.62	10.29	35.00	35.94	47.36

The average valuation found by analysis is slightly above the guaranteed valuation in most cases.

AVERAGE COST OF NITROGEN, AVAILABLE PHOSPHORIC ACID AND POTASH

The calculated retail costs in cents per pound of nitrogen, available phosphoric acid and potash, as calculated from the average selling price and guaranteed valuation of the various grades of fertilizer given in Table 5, are shown in Table 6. The cash selling prices used in the calculations were those given to the fertilizer inspectors by the retail merchants at

the time of inspection. For the purpose of these calculations, it was assumed that the prices were in the same ratios as the valuations. As the price of the same fertilizer may vary in different places, these figures may not be correct for any particular locality, but represent averages only, and are for purposes of comparison. For example, grades used near the factories might average lower in price than those used some distance away on account of the lower transportation costs. The fertilizers with the lowest cost per unit of plant food to the farmer are given first in the table.

Table 6. Approximate average cost (cents per pound) of nitrogen available phosphoric acid and potash during 1950-51

Grades	Nitrogen	Available phosphoric acid	Potash
Ammonium nitrate	11.53	—	—
Ammonium sulfate	11.63	—	—
Muriate of potash, 60%	—	—	4.78
13-39-0	18.39	6.13	—

5-10-5	22.22	7.41	7.41
6-12-6	22.41	7.47	7.47
Superphosphate, 45%	—	7.53	—
4-12-4	22.85	7.62	7.62
0-14-7	—	7.76	7.76
Superphosphate, 20%	—	7.97	—
10-10-0	24.74	8.25	8.25
6-10-4	28.47	9.49	9.49
6-12-4	30.44	14.50	14.50
Liquid fertilizers	72.15	24.05	24.05

Cost of nitrogen. The cheapest source of nitrogen was ammonium nitrate, followed by ammonium sulfate and ammonium phosphates (16-20-0 and 13-39-0). Nitrogen in ammonium nitrate cost only about half as much as nitrogen in nitrate of soda or the important grades of mixed goods, and only about one-sixth as much as nitrogen in liquid fertilizers, many of which used ammonium nitrate as the source of nitrogen.

Cost of available phosphoric acid. The cheapest sources of available phosphoric acid were the ammonium phosphates. Available phosphoric acid in the concentrated grades of superphosphate cost more than that in important grades of mixed goods, and about one-fourth as much as that in liquid fertilizers.

Cost of potash. Only a small amount of potash materials was sold, and no samples were obtained. The cheapest source of potash in mixed goods was 8-8-8, followed by 12-12-12. Potash in the important grades of mixed goods cost only about one-fourth as much as potash in liquid fertilizers.

Higher multiples. In general, plant food in fertilizers of high analysis cost less than that in lower analyses of the same ratio. The difference may be illustrated by a comparison of costs for the 1-2-1 ratio (5-10-5 vs 12-24-12) and 1-3-1 ratio (4-12-4 vs 10-30-10). Moreover, a large part of the 12-24-12 and 10-30-10 grades were pelleted, making a better product, which allowed better distribution and utilization. This is also true with respect to materials. Nitrogen in ammonium nitrate (33 percent or 33.5 percent N) cost only slightly more than half as much as nitrogen in nitrate of soda (16 percent N).

RELATION OF VALUATION GUARANTEED TO VALUATION FOUND

The average valuation guaranteed by guarantors of fertilizers doing business in Texas compared with the valuation found upon analysis of official samples, is shown in Table 7. In the preparation of this table, all analyses made were averaged, even though several were made of each brand. Fertilizer materials, as well as mixed fertilizers, were included in the calculation of the averages given. In nearly all cases, the valuation found exceeded the valuation guaranteed.

Rebates found to be due must be paid to the purchasers of the deficient fertilizers if they can be located. If all the purchasers cannot be located by the dealers records, the rebates must be paid to some recognized local agricultural, religious or charitable organization. The number of lots on which such rebates were paid by each guarantor is shown in Table 7. Only 32 samples were found to be more than 4 percent below the guaranteed valuation. Rebates amounting to \$2,439.14 were made to the purchasers.

The proportion of samples on which rebates were required was considerably less than for the 1949-50 year. The record this year was by far the best of any year in the history of fertilizer control in Texas. Particular commendation should be given to the guarantors of whom no rebates were required. In no case were goods guaranteed by 17 companies found more than 4 percent below the guaranteed valuation, although a total of 937 samples of these goods were analyzed.

Table 7. Average valuations guaranteed and found (dollars per ton) in samples of fertilizers guaranteed by different companies

HOW TO OBTAIN FREE ANALYSIS OF FERTILIZERS

Purchasers of commercial fertilizers for their own use on their own land (but not for sale) may obtain a free analysis of a sample, provided they take a sample in accordance with the requirements of the Texas fertilizer law governing such a case. This privilege of a free analysis applies only to fertilizers tagged and sold under the fertilizer law and to samples properly taken so that they represent the goods sampled. If the sample is not properly taken, it may not truly represent the fertilizer samples, and the results may be better or poorer than the goods actually are. The proper sampling of a fertilizer must be done carefully, and the law

requires that it be taken in a certain way to insure a fair sample. Those who desire the free analysis of a sample of commercial fertilizer should write to the State Chemist, College Station, Texas, and request a copy of the form entitled "Application for Free Fertilizer Analysis." No samples will be analyzed unless the sample is accompanied by this form, properly executed.

PUBLICATIONS DEALING WITH THE USE OF FERTILIZERS

Some publications dealing with the value and use of commercial fertilizers and issued by the Texas Agricultural Experiment Station are listed below. Single copies of these publications will be sent free upon request to the Publications Office, Texas Agricultural Experiment Station, College Station, Texas. To prevent needless waste, and to insure the best distribution possible of the Station's reserve of these publications, requesters are urged to limit their lists to titles they have reason to believe will be useful immediately, and which they will take the time to study. To avoid errors, both the number and the title of the publication should be given.

CIRCULARS:

- 90 Rose growing for the home gardener.

BULLETINS:

- 212 The availability of phosphoric acid in rock phosphate.
- 408 The effect of sulphur on yield of certain crops.
- 414 Possibilities of sulphur as a soil amendment.
- 428 The fertilizing value of greensand.
- 432 Manganese in Texas soils and its relation to crops.
- 445 The composition and fertilizing value of sewage sludge.
- 509 Availability of the phosphoric acid of finely-divided rock phosphate.
- 524 Fertilizer experiments with yellow Bermuda onions in the Winter Garden region of Texas.
- 596 Onion fertilizer experiments at Laredo, Big Wells and Eagle Pass, Texas.
- 627 Cottons resistant to wilt and root knot and the effect of potash fertilizer in East Texas.

- 647 Some factors affecting the utilization of phosphoric acid in soils by plants in pot experiments.
- 672 The value of different phosphates for various Texas soils and grasses as indicated by pot experiments.
- 693 Nitrification capacities of typical Texas soils and factors which affect nitrification.
- 699 Control of cotton root rot by sweetclover in rotation.

PROGRESS REPORTS:

- 675 Acid production in composts of sulphur and organic matter.
- 875 Yield chemical analysis and fertilizer response of eleven forage grasses.
- 963 The need for lime on some East Texas soils.
- 983 Effect of large amounts of phosphate upon yield and composition of grasses.
- 989 Fertilizers for white potatoes in the High Plains of Texas.
- 996 The effect of phosphate upon the percentage of phosphoric acid in pasture grasses.

- 1325 Distribution of fertilizer sales in Texas, July 1-Dec. 31, 1950.
- 1326 Effect of different amounts and combinations of nitrogen, phosphoric acid and potash upon the yield and quality of sweet potatoes at Nacogdoches.
- 1327 Effect of nitrogen, phosphorus and potassium on yield of forage and grain from Camellia oats.
- 1335 Fertilizer requirements for rice following improved and unimproved pastures.
- 1336 Effect of sulphur, nitrogen and phosphorus amendments on cotton production at the Blackland Station, 1950.
- 1339 Corn fertilizer studies near College Station, 1949-50.
- 1341 Supplying phosphorus to range cattle through the fertilization of range land.
- 1347 Yields of rice as affected by different nitrogenous fertilizers, lime and phosphoric acid, 1949-50.
- 1348 Fertilizer requirements for rice on the soils of the Gulf Coast Prairie of Texas, 1947-50.
- 1353 Effect of fertilizers on the shipping quality and yield of tomatoes in East Texas.
- 1355 Efficiency of fertilizer applications on dry, wet, and flooded soils, as measured by rice yields.
- 1360 Corn fertilizer tests in North-Central Texas, 1949-50.
- 1362 Effect of time of application of various fertilizers on the yield of rice varieties of different maturity, 1949-50.
- 1369 Correlation of forage yields and soluble soil phosphorus on Lake Charles clay loam.
- 1371 Renovation and fertilization of established stands of King Ranch bluestem.

- 1379 Barnyard manure and cotton burs as a dryland fertilizer for cotton.
- 1388 Corn fertility and spacing studies at the Blackland Station, 1948-50.
- 1395 Cotton yields in the El Paso Valley as influenced by applications of ammonium nitrate and superphosphate.
- 1399 Distribution of fertilizer sales in Texas, Jan. 1-June 30, 1951.

ANALYSES OF FERTILIZERS, 1950-51

A total of 1,816 samples of fertilizers and fertilizer materials was collected during the year by fertilizer inspectors from the goods being sold in many towns and cities of Texas. The chief places of sale were inspected several times. These samples were analyzed by the official methods of the Association of Official Agricultural Chemists of North America, as is required by law. Inspections were made by C. B. McLarry and H. W. Greene. Analytical work was done by Elora Dale, Natalie Nichols, Dorothy Dunn, Katherine Saunders, Jean King, Alice Waidhofer, Edna Welch, Marilyn Goodwin, Jean DeMottier, Joy Bellomy and Waldo Walker. The analyses are shown in Table 8.

SUMMARY

This bulletin is the 49th annual report of the operation of the Texas fertilizer law, and covers the period from September 1, 1950 through August 31, 1951.

The tonnage of fertilizers and fertilizer materials sold during this period amounted to 598,274 tons, an increase of about 10 percent over the tonnage sold during the preceding year. Grades of the 1-2-1 ratio accounted for 55 percent, the 1-3-1 ratio for 16 percent, and the 1-1-1 ratio for 6 percent of the total of 282,154 tons of mixed goods sold. Normal superphosphate represented 45 percent, concentrated superphosphate 7 percent, and ammonium phosphates 18 percent of the total 327,000 tons of unmixed fertilizer sold.

Fertilizer inspection fees equivalent to 598,274 tons of fertilizer were collected on fertilizers sold during the Texas fiscal year ending August 31, 1951, as compared with 545,899 tons sold during the preceding year.

Grades of mixed fertilizers approved by the Texas Fertilizer Committee for the year beginning September 1, 1951 are listed.

The analyses of 1,816 official samples of fertilizers are given. Valuations found upon analysis are compared with the analyses guaranteed by the registrants. Rebates totaling \$2,439.14 were paid upon 32 lots of fertilizer for which the valuation found was 4 percent or more below the valuation guaranteed.
