COMMERCIAL FEEDING STUFFS

J. W. CARSON, State Feed Inspector.
G. S. FRAPS, Chemist.

This bulletin is a second report of the operation of the amended Texas Feeding Stuff Law. The first report was published as Bulletin No. 117, of the Texas Experiment Station.

OBJECTS OF THE LAW.

The intent of the Feeding Stuff Law is to provide means by which every purchaser of feeding stuffs may know exactly what he is purchasing at the time of sale, and so to give protection to both the consumer and the honest manufacturer against the dishonest manufacturer. It also aims to protect the feeder against low-grade feeds.

The law can not protect against carelessness on the part of the purchaser of a feeding stuff. The purchaser of feeding stuffs should read the statement on the tax tag carefully before buying, and take advantage of the information given. The feeder should make himself familiar with the terms used in the analysis of feeds, and learn the significance of analysis.

The tax tag attached to every package of feeding stuff carries the following information:

1. The net weight of the contents of the package. This gives the quantity of feeding stuff in the package, exclusive of the weight of sack, or other container. The object of this provision of the law is to insure that every purchaser may know exactly how much feeding stuff he is buying.

2. The name of the article must be on the tag. This name must be correct. The law provides that no feeding stuff may be registered under a false or misleading name.

3. If the feeding stuff is a mixture, the names of the materials of which it is composed must be stated on the tax tag; and if adulterants, ground corn cobs, rice hulls, or similar substances are used, the percentage of each must be given.

4. The name and address of the manufacturer or importer, and the place of manufacture must be given on the tax tag.

5. The tax tag must carry a statement of the percentage of protein, fat, crude fiber, and nitrogen-free extract, which the feed is guaranteed to contain.

In order that this information may be exact, the law provides penalties for manufacturers who sell feeding stuffs which do not conform to the statements on the tax tag. It also makes provision for inspection of feeding stuffs and collection of samples, which are analyzed to ascertain whether they meet the requirements of the law.

HOW TO MEET THE REQUIREMENTS OF THE LAW.

The Director of the Experiment Station has established a department to take charge of the Feeding Stuff Law, which is called the "Feed Con-

trol." All correspondence relating to the feed law or feeding stuffs coming under it should be addressed "Feed Control," College Station, Texas.

The Feeds Which Come Under the Law.—All concentrated feeding stuffs, including wheat bran, corn chops, cottonseed meal, rice hulls, mixed feeds, etc., are subject to the requirements of the law.

Hay and straw, and the whole seed or grains of wheat, corn, and other whole grains or seed do not come under the provisions of this law. Farmers who grind their own feeding stuff and do not adulterate it, are not required to register feeding stuffs and pay the inspection tax under this law.

Registration.—Any manufacturer or importer who desires to offer a feeding stuff for sale in Texas should apply to the Feed Control for registration forms, one for each feeding stuff to be registered. On receipt of these forms he should fill them out completely, giving all the information required, and he should also execute the affidavit on the form. This application for registration should be mailed to the Feed Control, and at the same time a sample of not less than one pound of the feeding stuff, placed in a glass jar or bottle and sealed with sealing wax, should be shipped to the Feed Control by prepaid express. This sample must be a fair average sample of the feeding stuff, as stated in the affidavit on the registration certificate.

When the application for registration and the sealed sample of the feeding stuff arrive at the Feed Control office, the feeding stuff is registered at once, provided it conforms to the name and standards established for such feed. If in any respect the application is not satisfactory, it will be returned and a new application must be sent in.

If the sample of the feeding stuff does not weigh at least one pound and if it is not placed in a glass jar or bottle and sealed, it will not be accepted.

Re-registration.—When a manufacturer or importer wishes to re-register a feeding stuff which has already been registered, he applies for a re-registration form. New samples need not be sent when re-registration is desired, unless a change in the guarantee or in the percentage of materials in the feed is made. If such an alteration occurs, a new sample, placed in a sealed glass jar or bottle, must be sent in.

Re-registration must be made:

- (a) When a change in guarantee is desired.
- (b) When a change in ingredients is desired.
- (c) When the manufacturing plant or firm changes owners, or name.

When the name of a feeding stuff is changed, a new registration (and not a re-registration) must be made.

What Guarantee to Make.—In order to arrive at the percentage of protein, fat, crude fiber, and nitrogen-free extract, which he wishes to guarantee for his product, the manufacturer or importer may adopt either of the following plans:

1. He may examine the tables in this or other bulletins to ascertain the average chemical composition of products similar to his, and then

from consideration of these analyses he may make a guarantee that he feels that he can safely maintain.

2. He may send a fair average sample to some chemical laboratory for the determination of its content of protein, fat, crude fiber, and nitrogen-free extract, and base his guarantee on this analysis.

It is not safe to make a guarantee as high as the analysis made by the chemist, if the analysis is above the average, for feeding stuffs are naturally somewhat variable in composition, and, a high guarantee is difficult to maintain.

The Feed Control is at all times willing to make suggestions in regard to the guarantees of various feeding stuffs.

Tax Tags.—The law imposes a tax of 10 cents per ton on all concentrated feeding stuffs. The tax tag is simply a certificate from the Feed Control office, stating that the tax has been paid.

If the certified statement is correct and the sample is sealed and satisfactory, the feeding stuff is registered, and tax tags are shipped to the manufacturer or importer on his order. Money should accompany order, or tags will be sent by express C. O. D.

The Inspection Tax of 10 cents a ton, imposed by law, is collected from the sale of tax tags. These tags are put up in packages of 1000 to the box, and cost one-half cent each, good for 100 pounds. All tags are sold for such a price as to cost 10 cents for each ton of feeding stuff offered for sale.

The manufacturer or importer must have the following information printed on the tax tags before attaching them to the packages of feeding stuffs: The number of net pounds of feeding stuff in each package; the names of materials of which such weight is composed where the contents are of a mixed nature; the name, brand or trade-mark under which the article is sold; the name and address of the manufacturer or importer; the place of manufacture; such information as is required by Section 11, if any, and a guaranteed analysis, stating the minimum percentages of crude protein, of crude fat, and of nitrogen-free extract, and the maximum percentage of crude fiber in the feeding stuff. The information, including analysis, printed on tax tags should be exactly the same as was given in the application for registration. This information must be printed so that it can be easily read. When this information is not printed plainly, the law is violated. A rubber stamp may be used in printing information on the tax tags. The Feed Control office does not, under any circumstances, print this information upon the tag.

The following examples show how the information which the law requires should appear on the tax tag:

100 POUNDS CORN CHOPS.

Manufactured by J. W. Smith & Co., Smith, Texas.

Guaranteed Analysis:

Crude protein.....	9.00 per cent.
Crude fat.....	3.50 per cent.
Crude fiber.....	3.50 per cent.
Nitrogen-free extract....	70.00 per cent.

100 POUNDS MIXED FEED.

(Corn Chops and Cottonseed Meal.)

Manufactured by Brown, Jones & Co., Pittsadelphia, Texas.

Guaranteed Analysis:

Crude protein	15.50	per cent.
Crude fat.....	4.50	per cent.
Crude fiber.....	4.50	per cent.
Nitrogen-free extract.....	60.00	per cent.

100 POUNDS "LATEXCO."

(80 per cent cotton seed hulls.)

(20 per cent cotton seed meal.)

Manufactured by Louisiana & Texas Cotton Oil Co., San Francisco, Texas.

Guaranteed Analysis:

Crude protein.....	11	per cent.
Crude fat.....	3	per cent.
Crude fiber.....	42	per cent.
Nitrogen-free extract.....	30	per cent.

Weights.—The law fixes the standard weights of feeding stuffs as follows:

Mill products shall have the following standard weights, viz.: Flour, one hundred and ninety-six (196) pounds per barrel, or forty-eight (48) pounds per sack; corn meal, bolted or unbolted, thirty-five (35) pounds per sack; rice bran, one hundred and forty-three (143) pounds per sack; rice polish, two hundred (200) pounds per sack; and other feeds made from cereals of any kind, whether pure, mixed, or adulterated, one hundred (100) pounds per sack. Fractional barrels and sacks shall weigh in the same proportion, and these weights shall be net and exclusive of the barrel or sack in which the product is packed.

Feeding stuffs may also be sold in bulk. The Feed Control office will on request furnish information concerning bulk sales.

Adulteration.—An adulterated feed is one that contains any sawdust, dirt, damaged feed, or any foreign matter whatever, any rice hulls or chaff, peanut shells, corn cobs, oat hulls, or if other similar materials of little or no feeding value are admixed, or if the feed is in any respect not what it is represented to be; provided, that no wholesome mixture of feeding stuff is adulterated if the true percentage of constituents of such a feed are clearly stated on the package and made known to the purchaser at the time of sale.

Penalties.—The penalty for manufacturing, selling, or offering for sale any adulterated feeding stuff is a fine of not less than twenty-five dollars and not more than two hundred dollars, or imprisonment in the county jail for a term of not less than thirty days and not more than sixty days, or both fine and imprisonment.

The penalty for using any bag, box, barrel or any other receptacle into which to put a product other than the one bearing the name of the

mill manufacturing the product, is a fine of from one hundred dollars to one thousand dollars, or confinement in the county jail for a term of thirty days, or both fine and imprisonment.

The penalty for selling or offering for sale any concentrated feeding stuffs without the tax tag and the information required by the law, or with the statement that the feeding stuff contains substantially a larger percentage of protein, fat or nitrogen-free extract, or a smaller quantity of crude fiber than it does contain, is a fine of not less than one hundred dollars nor more than five hundred dollars for the first offense, and not less than five hundred dollars nor more than one thousand dollars for each subsequent offense.

Counterfeiting tax tags or using the same tag a second time may be punished by a fine of not more than five hundred dollars, one-half of which is paid to the informer. This fine may be increased for subsequent offenses.

Names of Feeding Stuff.—The Director of the Experiment Station has the power to adopt standards for feeding stuffs. He has the power to refuse the registration of any feeding stuff under a name which will be misleading as to the materials of which it is made, or which does not conform to the standards and definitions which he has adopted. If any feeding stuff should be registered and it be discovered afterwards that it does not conform to the standards the Director has adopted, or if it is found that it was registered under a misleading name, the Director has the power to cancel the registration ten (10) days after notice.

The standards and definitions which have been adopted are printed elsewhere in this bulletin. (See page 12.)

DEFINITION OF TERMS.

The Texas Feed Law now requires a guarantee of protein, fat, nitrogen-free extract, and the maximum percentage of crude fiber.

The complete analysis of a feeding stuff gives its content of water, ash, protein, fat, crude fiber, and nitrogen-free extract, expressed in percentages.

Protein, being the constituent of food which forms flesh, muscle, hair, ligaments, and other portions of the animal body, is of great importance. It replaces the wear and tear of the animal tissue and furnishes material for additional flesh. Besides furnishing material for tissue, protein may be burned in the body to produce heat, or it may serve as a source of fat in case of a deficiency in carbohydrates and fat accompanied by excess of protein. It is, however, a costly source of heat and fat.

Value of Protein.—Protein is the most expensive portion of a food, and feeds rich in protein usually sell for a higher price than feeds low in protein, though the difference is not as great in Texas as in the Northern States. With a given feed, the more protein it contains, the better its quality, compared with other feeds of the same kind. For example, cottonseed meal containing 48 per cent protein is of better quality than cottonseed meal containing 45 per cent protein. A low protein content, accompanied by a high content of crude fiber, indicates that the cottonseed meal contains an excessive amount of hulls.

We can not, however, compare the values of feeds of different kinds on a protein basis alone. For example, a cottonseed meal containing 45 per cent protein does not have five times the value of corn chops containing 9 per cent protein. There are other constituents of both feeding stuffs (fat and nitrogen-free extract) which are of value to the animal, and corn chops contains much more nitrogen-free extract than cotton seed meal. The digestibility of the constituents is also of importance. This will be discussed on another page of this bulletin.

Fat (or Ether Extract) is composed mainly of fats and oils in the case of concentrated feeding stuffs, but with fodders and hays it is often composed to a considerable extent of waxes, coloring matter, and other substances. Fat is used in the animal body as a source of body fat and to furnish heat and energy. The animal requires heat to keep its body warm and energy to run the animal mechanism or to do outside work. The beating of the heart, chewing, movements of the intestines, and the involuntary muscular movements require energy which is furnished by the oxidation of fats, carbohydrates or protein. One pound of fat is equal to 2.25 pounds of carbohydrates.

Value of Fat.—Fat ranks next to protein in its value in a feeding stuff. The more protein and fat a given feed contains, the better its quality compared with other feeds of the same kind. Cottonseed meal containing 58 per cent protein and fat is of higher value than cottonseed meal containing 50 per cent protein and fat. Cottonseed meal is indeed often sold on the basis of its protein and fat content, as determined by chemical analysis.

As with protein alone, however, two feeds of different kinds can not be compared on the basis of their content of protein and fat, since other factors enter into consideration, which will be discussed later.

Crude fiber is the portion of the plant which resists the intense action of acids and alkalis. It consists mostly of the cell walls and woody fiber of the plant, and is the most indigestible part of the feed stuff. By means of fermentation in the intestines, crude fiber is digested to some extent in animals which chew the cud. The operation, however, consumes so much energy that a large portion of the value of the crude fiber is taken up by the process of digestion. Hays and fodders and other roughage generally contain much crude fiber, but concentrated feeding stuffs comparatively small quantities of it.

Value of Crude Fiber.—Crude fiber is the woody and less digestible portion or a feeding stuff. The more crude fiber a feed contains, the poorer its quality compared with other feeds of the same kind. Feeding materials of low commercial value, and of low value to the animal, such as straw, cottonseed hulls, rice hulls, oat hulls, corn cobs, etc., contain large quantities of crude fiber, and their addition to a concentrated feeding stuff increases its content of crude fiber. Thus, if the crude fiber in cottonseed meal exceeds certain limits, it indicates that the meal is adulterated with cottonseed hulls. In a similar way, crude fiber in excess of a given minimum may indicate corn cob or corn bran in corn chops; rice hulls in rice bran or other feeding stuffs. The amount of crude fiber is a much more sensitive indication of low quality

or of adulteration than the protein and fat, since the adulterants generally contain large quantities of crude fiber.

To repeat, the more crude fiber a feeding stuff contains, the poorer its quality compared with other feed of the same kind. This also holds good to some extent in comparing feeds of different kinds, but not entirely; we must also consider the protein and fat contents of the two kinds of feed. Thus wheat bran contains considerably more crude fiber than corn chops, but may have a higher value when protein is worth more than fat and nitrogen-free extract.

Nitrogen-free extract is composed of starch, sugar, dextrin, and other substances of similar nature. These substances are mostly carbohydrates; that is, they contain carbon and hydrogen and oxygen in proportions to form water. Crude fiber is also composed largely of carbohydrates.

Value of Nitrogen-Free Extract.—The nitrogen-free extract of most concentrated feeding stuffs, such as corn chops, wheat bran, cottonseed meal, Kaffir corn, is composed largely of sugars and starches which are readily digested and have considerable value to the animal.

The nitrogen-free extract of wheat skins, corn bran, corn cobs, rice hulls, hays and straws, and similar feeds, is composed mostly of other substances than sugar and starch, and has a lower value to animals. The nitrogen-free extract of these two kinds of feeds, therefore, can not be compared directly.

In general, we may say that the more protein, fat and nitrogen-free extract, and the less crude fiber and ash a given feed contains, compared with other feeds of the same kind, the better the quality of the feeding stuff, and the reverse is also true.

The same statement also holds in comparing feeding stuffs of different kinds, but not altogether; since, in comparing feeds of different kinds we must also consider their digestibility and the productive value of the digested material.

Ash is the residue left when the plant is burned. It represents mostly the mineral portion of the plant and the portion which comes from the soil, although a part of the ingredients withdrawn from the soil are volatilized during combustion. Nitrogen particularly is driven out completely. Ash is valuable to the animal, inasmuch as it furnishes the material for bones, and some constituents of it, particularly phosphoric acid and sulphur, are essential constituents of the animal cell.

Value of Ash.—Ash is necessarily present in feeding stuffs. An excessive amount indicates contamination with dirt, sand, or other mineral matter. Too little ash in the ration fed may give rise to disorders, especially in young animals.

Water (moisture) is always contained in feeding stuffs, but since it is furnished for the most part in liquid form, it can not be considered as having any special nutritive value.

Value of Water.—The more water a feeding stuff contains, the less of the other nutrients it contains, and the more liable it is to be injured by heating, mold, etc. The water content of feeds varies, being larger in fresh grain.

PROVISIONAL STANDARDS AND DEFINITIONS.

The following provisional standards and definitions have been adopted. If it is desired to use a name not included in this list, it would be well to correspond with the Feed Control before making application for registration. Other names may be used, provided they are not false or misleading.

Adulterants.—Any feeding stuff which contains rice hulls or chaff, peanut hulls, corn cobs, oat hulls, any ground hay, straw, or roughage, or any other feeding stuff of low feeding value, is considered as adulterated. The quantity of each adulterant must be stated on the tax tag.

COTTONSEED PRODUCTS.

Cottonseed meal is composed of the decorticated kernels of cotton seed, free from foreign materials. It should contain not less than 43 per cent protein, 7 per cent fat, and not over 9 per cent crude fiber.

Cottonseed cake should correspond to cottonseed meal in composition.

Cottonseed meal and hulls, or cottonseed feed meal, consists of cottonseed meal mixed with hulls. It should contain not more than 20 per cent hulls, and should have an analysis of not less than 32 per cent protein, 8 per cent fat, and not more than 20 per cent crude fiber.

Cottonseed hulls and meal is a mixture of cottonseed hulls with less than 50 per cent meal. The quantity of meal present should be stated on the tax tag.

Cold pressed cottonseed flake is the residue from the extraction of oil from the whole seed.

Ground cottonseed flake corresponds to cold pressed cottonseed flake.

WHEAT PRODUCTS.

Wheat bran is the outer covering of the wheat grain, with or without shorts, containing not more than 2 per cent mill run screenings. It should contain not less than 14 per cent protein, 3 per cent fat, and not more than 10 per cent crude fiber.

Wheat shorts is the starchy portion of the wheat seed. It should contain not less than 14 per cent protein, 3 per cent fat, and not more than 5 per cent crude fiber.

Wheat chops is the entire grain of sound wheat, of good quality, chopped up. It should contain not less than 14 per cent protein, 2 per cent fat, and not more than 5 per cent crude fiber.

Bran consists of wheat bran containing not more than 5 per cent corn bran. The approximate percentage of each bran must be printed on the tax tag.

Mixed bran consists of a mixture of brans, but it must not contain any other materials. The quantity of each bran must be printed on the tax tag.

Adulterated wheat bran, or adulterated bran, consists of wheat bran containing not more than 30 per cent of adulterants. The quantity of the adulterants must be stated on the tax tag.

CORN PRODUCTS.

Pure corn chops consists of the pure grain of corn, from sound seed, and of good quality chopped up. It should contain not less than 9 per cent protein, 3 per cent fat, and not more than 3.50 per cent crude fiber.

Corn chops is composed of pure corn chopped up, and should contain not less than 9 per cent protein, 3 per cent fat, and not more than 3.50 per cent crude fiber. It should contain not more than 5 per cent excess of bran.

Ear corn chops is chopped corn and cobs with not a greater proportion of cob than occurs in the ear corn (20 per cent of cob). It should contain not less than 8 per cent protein, 3 per cent fat, and not more than 8 per cent crude fiber.

Ear corn meal corresponds to ear corn chops.

Corn and cob meal consists of corn and cob. The percentage of corn and cob must be stated on the tax tag.

Corn bran is the outer covering of the corn grain. It should contain not less than 8 per cent protein, 3 per cent fat, and not more than 16 per cent crude fiber.

RICE PRODUCTS.

Rice bran is the cuticle of the rice grain. Pure rice bran should contain not less than 11 per cent protein, 10 per cent fat, and not more than 15 per cent crude fiber.

Adulterated rice bran shall be applied to any rice bran not conforming to the standard given above.

Rice polish is the finely powdered material secured in polishing rice. It should contain not less than 11 per cent protein, 6 per cent fat, and not more than 4 per cent crude fiber.

KAFFIR CORN AND MILO MAIZE PRODUCTS.

Kaffir corn, or milo maize, chops consists of the entire grain removed from the head and chopped up. It should contain not less than 9 per cent protein, 3 per cent fat, and not over 3.50 per cent crude fiber.

Kaffir corn, or milo maize, head chops consists of the entire head chopped up. It should contain not less than 8 per cent protein, 2.50 per cent fat, and not more than 8 per cent crude fiber.

MIXED PRODUCTS.

Corn and wheat bran consists of a mixture of corn and wheat bran, the percentage of each being stated on the tax tag.

Mixed feed is a mixture of wholesome feeding stuffs. The name of the different feeds must be stated on the tax tag.

Adulterated mixed feed contains any adulterant as defined on a preceding page. The quantity of the adulterant must be stated on the tax tag.

Other names may be used, with the approval of the Feed Control Department.

FEEDERS MUST INFORM THEMSELVES.

In order to secure the full benefit of the Feedstuff Law feeders must familiarize themselves with the meaning of the terms protein, fat, etc.; they must read the tax tags on the feed they purchase, and understand the meaning of the guarantee thereon. Every feeder should know, for example, that cottonseed meal containing 49 per cent protein is worth more for feeding purposes than meal containing 43 per cent protein. Especially in the purchase of mixed feeds should the feeder take care to examine closely into the nature of the material which he is getting.

The margin between profit and loss in feeding is too small for the feeder not to take every advantage in the difference in prices of feeds.

AVERAGE COMPOSITION OF TEXAS FEEDING STUFFS.

Table No. 1 shows the average composition of the concentrated feeding stuffs, the analyses of which are published in this bulletin. The individual analyses will be discussed on another page. (See page 19.)

TABLE I.

AVERAGE CONTENT OF PROTEIN, FAT, CRUDE FIBER AND NITROGEN-FREE EXTRACT IN FEED CONTROL SAMPLES.

Number of Samples	Name of Feeding Stuff	Crude Protein— Per cent	Crude Fat— Per cent	Crude Fiber Per cent	Nitrogen-Free Extract— Per cent
479	Cotton Seed Meal.....	47.03	9.56	7.05	24.32
174	Cotton Seed Cake.....	47.70	8.30	6.95	24.43
15	Cold Pressed Cotton Seed Cake.....	26.61	6.99	23.80	30.03
296	Wheat Bran.....	16.20	3.73	8.57	54.69
153	Wheat Shorts.....	17.14	4.09	4.28	60.97
46	Mill Run Bran.....	16.57	3.88	8.42	54.68
920	Corn Chops.....	9.54	3.99	2.58	70.98
24	Corn Bran.....	8.49	4.34	11.00	64.79
49	Maize Chops.....	10.14	2.74	2.89	72.60
53	Kaffir Chops.....	10.26	3.02	2.58	72.16

DIGESTIBILITY OF FEEDING STUFFS.

That portion of the feed which disappears in its passage through the animal is termed the digestible portion. The constituents of different feeds vary in digestibility, so that the content of digestible nutrients in a feed affords a better basis for comparison than the chemical composition alone.

There are a number of conditions which influence digestibility, such as stage of growth of the plant, the kind and condition of the animal, the ratio between the different nutrients, and the treatment given to the

feed. It would occupy too much space to discuss these matters in detail here.

By coefficient of digestibility we mean the percentage or the proportion which is digested. For example, suppose the coefficient of digestibility of protein in green corn is given at 59.7. This means that 59.7 per cent of all the protein in the corn disappears in the passage of the feeding stuff through the animal. That which disappears does not necessarily enter into and become useful to the animal. Some portion of it is destroyed by fermentation.

Table II gives the quantity of digestible nutrients in 100 pounds of the various feeding stuffs named. These figures afford a basis of comparison between the different feeding stuffs. The digestible nutrients from one feeding stuff, however, do not always have the same values as those from other feeding stuffs. For example, the digestible nitrogen-free extract of corn chops has a considerably greater value to the animal than that of corn cob. The digestible nitrogen-free extract of corn cob has just 50 per cent of the value of the digestible nitrogen-free extract of corn chops.

TABLE II.

POUNDS OF DIGESTIBLE NUTRIENTS IN 100 POUNDS OF FEEDING STUFFS NAMED.

	Crude Protein	Crude Fat	Crude Fiber	Nitrogen-Free Extract
Cotton Seed Meal.....	39.0	8.7	3.6	14.6
Cotton Seed.....	14.4	22.4	14.7	9.6
Cotton Seed Hulls.....	.6	1.9	18.1	14.1

RELATIVE VALUES OF FEEDING STUFFS.

In Table III we give the relative productive values of different feeding stuffs sold on the Texas market. These values are based upon two factors.

One of these factors is the quantity of digestible protein contained in 100 pounds of material. The protein represents the flesh-forming value of the food, or its capacity to produce lean meat.

The other of these two factors is the fat value of the feeding stuff. The fat value represents the actual number of pounds of fat which 100 pounds of the feeding stuff can produce when added to a ration sufficient for the support of the animal. The fat value has been determined by actual experiments.

We have also attempted to combine these two values, the flesh-forming value and the fat-producing value. This combination is difficult to make, as the relative value of protein to fat varies. Protein may sometimes cost more than fat, sometimes much less. Protein has both a fat-producing value and a flesh-forming value. We have assumed that the flesh-forming value of the protein is equal to its fat value, which would make one pound of protein equal to four-fifths of a pound of fat. As the fat value of the protein has already been considered in estimating the fat value of the entire feed, we simply add the fat value of the protein again to secure a figure representing the total relative productive value of the feeds.

TABLE III.

RELATIVE VALUE OF FEEDING STUFFS.

	Relative Productive Value Expressed in Dollars Per Ton.	Pounds Digestible Protein in 100 Pounds of Feed.	Pounds of Fat Producible by 100 Pounds of Feed.
Cotton Seed Meal.....	\$28.30	39.0	19.1
Cotton Seed.....	24.80	14.5	21.2

Cotton Seed Hulls.....	3.20	.6	3.0
Rice Hulls.....	.80	.4	.7

In Table III, then, we give the relative productive value in sums of money of the different feeding stuffs used in Texas, based upon the actual value of these feeding stuffs to the animal for the production of flesh, fat, etc., and we believe these values represent fairly well the feeding value of these feeding stuffs. These figures are based upon the average analyses of Texas products as given in Table I of Bulletin 117. In Table III we give the content of digestible protein, and the actual number of pounds of fat which can be produced from 100 pounds of the feeding stuff when added to a ration already sufficient for the purpose of the animal.

We wish to emphasize the fact that the fat value of a feeding stuff does not represent the quantity of fat which will be produced by the animal eating it, but represents the quantity which should be produced from the feeding stuff in question when fed in addition to a ration already sufficient for the needs of the animal body. Only the excess of feed over the needs of the body can be used for productive purposes (flesh, fat, milk, etc.) and within certain limits, the greater this excess, the

greater the proportion of the ration fed is converted into milk, fat, etc.

The feeding stuffs in the table are arranged in the order of the relative productive value. The value of feeding stuffs depends also upon their palatability to the animal, and some other conditions. Cotton seed has a high feeding value, but the large quantity of fat which it contains makes it unsuitable for some purposes except in moderate quantity, as an excess of fat may lead to digestive disturbances. Although wheat bran has a lower feeding value than corn, its higher content of protein makes it more desirable for some purposes. As we said before, it is difficult to combine both fat value and flesh value into a single value indicative of the relative feeding value of the different feeding stuffs.

Feed of low value, such as wheat chaff, corn cobs, oat hulls, rice straw, cottonseed hulls, and rice hulls, have comparatively little value for fattening or for milk production, unless fed in connection with very concentrated feeding stuffs in order to give bulk to the ration. Rice hulls have practically no feeding value.

In Table III we also give the digestible protein, and the productive value (energy) expressed in terms of fat. As both protein and energy must be purchased, it often happens that it is cheapest to purchase protein in one feeding stuff, and energy in another. The following table (Table IV) gives the relative cost of one pound of protein and one pound of fat-producing power at the average present price of some Texas feeding stuffs. It is seen from the table that cottonseed meal is the cheapest source of protein at present prices. Energy, expressed in terms of the power of the feed to produce fat, is more cheaply purchased in the form of rice bran. Rice polish and cotton seed come next. Under the present conditions of the Texas market, protein is, on the average, about as cheap as fat-producing power.

TABLE IV.

RELATIVE COST OF NUTRIENTS.

	Selling Price Per Ton.	Cost of One Pound of Digestible Protein. Cents.	Cost of One Pound of Fat-producing Capacity. Cents.

Cotton Seed Hulls.....	7.50	62.5	12.5

HOW TO USE INFORMATION ON THE TAX TAG.

Purchasers of feeding stuffs should familiarize themselves with the information printed on the tax tag attached to packages of feeding stuffs, and utilize this information for their purposes.

The purchaser should first consider the name and character of the feeding stuff. If it is an unmixed feeding stuff, he can easily decide whether or not the cost of the feeding stuff is equal to its value to him. He can also ascertain whether or not he is really purchasing an unmixed feed. If the consumer is purchasing a mixed feed, he can easily examine the tag and ascertain whether or not he wishes to pay the price demanded for this particular mixture, and whether or not it would be cheaper to purchase the pure and unmixed feeding stuff ingredients and mix them himself.

The consumer of the feeding stuff should also consider the chemical analysis printed on the tag. He should familiarize himself with the nature of protein, fat, crude fiber, and nitrogen-free extract, and their relative values for feeding. He should also know something of the average chemical composition of the feeding stuff which he is purchasing. So far as possible, he should purchase high-grade materials, whenever the price is in proportion to their value. He can thus take advantage of differences in feeding value of feeding stuffs selling for nearly the same price and secure the most value for his money. He can also prepare a ration best suited to the animals, and the purposes for which he is feeding.

The information above referred to is printed on the tag. This bulletin contains a discussion of these matters. Other information will be cheerfully furnished when requested. The consumer of feeding stuffs should learn to utilize them to the greatest advantage and in the most economical manner in order to secure the most profit from them.

FEED CONTROL INSPECTION.

The Feed Control has five inspectors traveling over the State, examining feed stuffs for adulteration, false weights, untagged goods, and other violations of the law, and collecting samples for analysis. There have been some few violations of the intent and purposes of the law, but most of these were unintentional, or due to ignorance. On the whole, the law is being complied with cheerfully and willingly by all concerned, and the consumer of feeding stuffs has within his reach full information in regard to feeding stuffs which he is purchasing.

The composition of the feeding stuffs subjected to analysis was, as a rule, well up to guarantee. Some of the feeding stuffs have fallen below their guarantee on account of too high a guarantee; there were some of inferior quality.

The table beginning with page 26 shows the composition of samples sent in by manufacturers (these are termed "deposit samples"), and those collected by inspectors of the Feed Control (these are termed "inspectors' samples"). These analyses were made by Assistant Chemists S. E. Asbury, E. C. Carlyle, J. B. Rather, A. C. Deiler, T. L. Ogier, J. B. Kelly and J. T. Auten, under the direction of the chemist.

PRESSURE ON FEED CONTROL.

The Feed Control is constantly in receipt of letters from parties who wish to place inferior grades of feed upon the market, under the name

of superior feeds, and who wish decisions or standards modified so as to allow them to do this. There are also constantly made attempts to evade the requirements of the law requiring the true name of the feed to be stated, or the section requiring the ingredients of a mixed feed to be named.

The Feed Control stands between the sellers and consumers of feed, and the law requires it to see that feeds are exactly what they are sold for. It is true that the chemical analysis of the feed must be stated upon the tag, but the seller of inferior feed, who wishes to sell his feed under the same name as a standard feed, wishes to take advantage of his customer who does not carefully read and consider the analysis on the tag, or the one who is ignorant of the significance of the analysis. Further, the different constituents of a feed have different values according to the nature of the feed in which they occur. For these reasons, the law has given the Feed Control the power to fix standards, and requires an exact statement of the constituents of feeds. It would be a violation of the intent of the law for an inferior feed to be sold as a standard feed.

In justice to the sellers of feeds doing business in the State, we must state that attempts to cause us to lower our standards are comparatively few.

VARIATIONS IN COMPOSITION OF THE SAME FEED.

Table V contains the average composition of various feeds, the ten highest in protein being averaged, and the ten lowest in protein being averaged. Tables VI-XIX contain the detailed analyses of the groups averaged, which were selected, as we just stated, because they were the ten highest and the ten lowest, in protein, in the tables.

Cottonseed Meal.—The chief difference between the two groups with this feed is the protein and crude fiber content. The average difference in protein is 10.71 per cent. The average difference in crude fiber is 4.64 per cent. The difference in the quantity of fiber is due to difference in amount of hulls present, which decrease the value of the meal, as everyone should know.

A feeder purchasing an average low protein cottonseed meal (42.17 per cent) would pay 3.6 cents a pound for the total protein, if the meal cost \$30 a ton. If the feeder took care to select cottonseed meal high in protein (52.86 per cent) and paid the same price per ton for it, the protein would cost only 2.8 cents per pound. The first feeder would secure 844 pounds protein per ton, the second one 1058 pounds. This shows the importance of considering the analysis. Since the difference in the quantity of protein present is nearly twenty per cent a feeder who selected one of the high-protein meals could pay ten per cent more for it, and then get protein at a less price per pound, than one who purchased the low-protein meal.

Cottonseed Cake.—The differences are similar to cottonseed meal. Attention to the analysis would here also be money saved to the purchaser.

Wheat Bran.—The high protein feed is offset by containing a smaller

amount of nitrogen-free extract, but still has a higher feed value than the low protein feed.

Wheat Shorts.—As with wheat bran, the high protein is offset to some extent by being lower in nitrogen-free extract. The high protein shorts are also higher in fat. The feed high in protein is no doubt of higher value than that low in protein.

Corn Bran.—Corn bran is so variable in composition that the feeder should always carefully consider the analysis. The high protein corn bran is not only higher in protein, but is considerably higher in fat and lower in fiber, showing that it has a decidedly greater feeding value.

Milo Maize and Kaffir Corn.—The chief difference is the protein. The higher the protein, the greater the feeding value.

Rice Bran.—The bran high in protein contains much less fiber, showing that less *rice hulls* are present. The feeding value is much higher.

Rice Polish.—A high protein is accompanied by a high fat, but is offset, to some extent, by a low nitrogen-free extract.

TABLE V.

AVERAGE COMPOSITION OF THE TWENTY SAMPLES HIGHEST AND LOWEST IN PROTEIN.

		Protein	Fat	C. Fiber	N.-F. Extract
COTTON SEED MEAL	High	52.86	9.36	4.83	21.76

DISCUSSION OF FEED CONTROL ANALYSES.

The average analyses of feeding stuffs as printed in Table I of this bulletin are practically the same as the averages of the analyses made in the season of 1907-08 and published in Bulletin No. 117. It is a very significant fact that there should be such comparatively small differences between these averages for different seasons. Averages for the following feeds are given in Table I, which have not heretofore been given: Milo maize chops, Kaffir corn chops, alfalfa meal, and dried brewers' grains. The number of mixed feeds on the market has increased. No averages are given for these mixed feeds, but the guarantees and analyses can be found in the detailed report of analyses, presented in the succeeding pages.

SOME RATIONS PREPARED BY PROF. J. C. BURNS OF THE
ANIMAL HUSBANDRY SECTION OF THE STATION.

RATIONS FOR FATTENING CATTLE.

Amount of Feed per 1000 Pounds of Live Weight.

Ration No. 1.

17 pounds corn.
4 pounds cottonseed meal.
8 pounds cottonseed hulls.
15 pounds sorghum silage.

Ration No. 2.

14 pounds corn.
3 pounds wheat bran.
3 pounds cottonseed meal.
12 pounds sorghum hay.

Ration No. 3.

18 pounds corn.
4 pounds cottonseed meal.
12 pounds sorghum hay.

Ration No. 4.

20 pounds corn.
14 pounds cowpea hay.

Ration No. 5.

8 pounds black strap molasses.
6 pounds cottonseed meal.
22 pounds cottonseed hulls.

Ration No. 6.

20 pounds corn.
14 pounds alfalfa hay.

Ration No. 7.

18 pounds corn.
4 pounds cottonseed meal.
12 pounds cottonseed hulls.

Ration No. 8.

6 pounds cottonseed meal.
30 pounds cottonseed hulls.

RATIONS FOR GROWING BEEF CATTLE.

Amount of Feed per 1000 Pounds Live Weight.

Ration No. 1.

12 pounds corn.
2 pounds cottonseed meal.
5 pounds wheat bran.
12 pounds cottonseed hulls.

Ration No. 2.

14 pounds corn.
3 pounds cottonseed meal.
4 pounds wheat bran.
12 pounds sorghum hay.

Ration No. 3.

12 pounds corn.
2 pounds cottonseed meal.
15 pounds corn silage.
10 pounds cowpea hay.

Ration No. 4.

8 pounds corn.
5 pounds oats.
5 pounds wheat bran.
12 pounds alfalfa hay.

Ration No. 5.

8 pounds corn.
6 pounds wheat bran.
4 pounds oats.

6 pounds alfalfa hay.
6 pounds corn stover.

RATIONS FOR FATTENING SHEEP.

Amount of Feed per 100 Pounds Live Weight.

Ration No. 1.

$1\frac{1}{2}$ pounds corn.
 $2\frac{1}{2}$ pounds alfalfa hay.

Ration No. 2.

2 pounds corn.
 $\frac{1}{2}$ pound cottonseed meal.
 $1\frac{1}{2}$ pounds prairie hay.

Ration No. 3.

1 pound black strap molasses.
 $\frac{3}{4}$ pound cottonseed meal.
 3 pounds cottonseed hulls.

Ration No. 4.

1 pound corn.
 1 pound wheat bran.
 $1\frac{1}{2}$ pounds sorghum hay.

Ration No. 5.

2 pounds corn.
 $\frac{1}{2}$ pound wheat bran.
 $1\frac{1}{2}$ pounds cowpea hay.

Ration No. 6.

1 pound rice bran.
 1 pound molasses.
 2 pounds cowpea hay.

RATIONS FOR GROWING SHEEP.

Amount of Feed per 100 Pounds Live Weight.

Ration No. 1.

$\frac{1}{2}$ pound corn.
 $\frac{1}{2}$ pound cottonseed meal.
 $\frac{1}{2}$ pound wheat bran.
 2 pounds prairie hay.

Ration No. 2.

1 pound corn.
 $\frac{1}{2}$ pound wheat bran.
 $2\frac{1}{2}$ pounds alfalfa hay.

Ration No. 3.

1 pound corn.
 $\frac{1}{2}$ pound cottonseed meal.
 1 pound cowpea hay.
 1 pound sorghum hay.

Ration No. 4.

1 pound corn.
 $\frac{1}{2}$ pound wheat bran.
 $\frac{1}{2}$ pound cottonseed meal.
 $1\frac{1}{2}$ pounds cottonseed hulls.

Ration No. 5.

$1\frac{1}{2}$ pounds rice bran.
 $\frac{1}{2}$ pound cottonseed meal.
 $1\frac{1}{2}$ pounds cowpea hay.

Ration No. 6.

1 pound corn.
 $\frac{1}{2}$ pound cottonseed meal.
 $\frac{1}{2}$ pound wheat bran.
 2 pounds turnips.
 1 pound corn stover.

RATIONS FOR FATTENING HOGS.

Amount of Feed per 100 Pounds Live Weight.

Ration No. 1.

5 pounds corn (soaked).
 $\frac{1}{2}$ pound tannage.

Ration No. 2.

5 pounds corn.
 $12\frac{1}{2}$ pounds skim milk.

Ration No. 3.

4 pounds rice bran.
 $\frac{1}{2}$ pound black strap molasses.
 $\frac{1}{2}$ pound tankage.

Ration No. 5.

$3\frac{1}{2}$ pounds corn.
 $1\frac{1}{2}$ pounds cowpea meal.

Ration No. 4.

3 pounds corn.
 2 pounds wheat shorts.
 Ration No. 6.

3 pounds corn.

2 pounds alfalfa meal.

RATIONS FOR GROWING PIGS.

Amount of Feed per 100 Pounds Live Weight.

Ration No. 1.

3 pounds corn.
 1 pound wheat shorts.
 8 pounds skim milk.

Ration No. 3.

$2\frac{1}{2}$ pounds corn.
 $2\frac{1}{2}$ pounds cowpea meal.

Ration No. 5.

4 pounds corn.
 16 pounds skim milk.

Ration No. 2.

3 pounds rice polish.
 1 pound wheat shorts.
 6 pounds skim milk.

Ration No. 4.

$3\frac{1}{2}$ pounds corn.
 $\frac{1}{2}$ pound wheat bran.
 $\frac{1}{2}$ pound tankage.

Ration No. 6.

$1\frac{1}{2}$ pounds corn.
 $2\frac{1}{2}$ pounds shorts.
 1 pound alfalfa hay.

RATIONS FOR HORSES DOING MEDIUM HARD WORK.

Amount of Feed per 1000 Pounds Live Weight.

Ration No. 1.

14 pounds oats.
 13 pounds prairie hay.

Ration No. 3.

14 pounds corn.
 7 pounds alfalfa hay.
 7 pounds prairie hay.

Ration No. 5.

8 pounds rice bran.
 4 pounds molasses.
 $2\frac{1}{2}$ pounds cottonseed meal.
 12 pounds prairie hay.

Ration No. 2.

12 pounds corn.
 2 pounds cottonseed meal.
 12 pounds prairie hay.

Ration No. 4.

9 pounds corn.
 9 pounds wheat bran.
 9 pounds Johnson grass hay.

Ration No. 6.

5 pounds corn.
 5 pounds wheat bran.
 5 pounds oats.
 12 pounds sorghum hay.

RATIONS FOR GROWING HORSES.

Amount of Feed per 1000 Pounds Live Weight.

Ration No. 1.

3 pounds corn.
 3 pounds oats.
 3½ pounds wheat bran.
 8 pounds alfalfa hay.
 8 pounds corn stover.

Ration No. 2.

5 pounds oats.
 5 pounds wheat bran.
 6 pounds alfalfa hay.
 10 pounds corn stover.

Ration No. 3.

10 pounds corn.
 2½ pounds cottonseed meal.
 12 pounds prairie hay.

Ration No. 4.

10 pounds corn.
 12 pounds alfalfa hay.
 4 pounds prairie hay.

Ration No. 5.

4 pounds corn.
 6 pounds wheat bran.
 2 pounds cottonseed meal.
 14 pounds sorghum hay.

NOTE.—Kaffir corn or milo maize may be used in the place of corn in any of the above named rations in which corn is used.

COPY OF LAW REGULATING SALE OF FEED STUFFS IN
THE STATE OF TEXAS.

Effective July 11, 1907.

An Act to amend Sections 1, 4, 5, 6, and 11, of Chapter 108, Acts of the Twenty-ninth Legislature, being an Act entitled "An Act regulating the sale of concentrated commercial feeding stuffs and the materials from which they are manufactured, defining concentrated feeding stuffs, prohibiting their adulteration, providing for their correct weighing and marking, and providing for the collection of samples, the expenses of the enforcement of the law, and fixing penalties for its violation," and to add thereto:

"SEC. 11a. Empowering the director of the Experiment Station to adopt standards and definitions for concentrated feeding stuffs and to refuse the registration of feeding stuffs under certain circumstances, and to cancel registration under certain circumstances after notice, and to empower said director to adopt rules and regulations for the enforcement of all of the provisions of this act."

Be it enacted by the Legislature of the State of Texas:

SECTION 1. That Sections 1, 4, 5, 6, and 11, of Chapter 108, of the Twenty-ninth Legislature, entitled "An Act regulating the sale of concentrated commercial feeding stuffs and the materials from which they are manufactured, defining concentrated feeding stuffs, prohibiting their adulteration, providing for their correct weighing and marking, and providing for the collection of samples, the expenses of the enforcement of the law and fixing penalties for its violation," be so amended as to hereafter read as follows, and that

Section 11A, empowering the director of the Experiment Station to adopt standards and definitions for concentrated feeding stuffs and to refuse the registration of feeding stuffs under certain circumstances and to cancel registration under certain circumstances after notice, and to empower said director to adopt rules and regulations for the enforcement of all the provisions of this act, be enacted so as to read as follows:

"Section 1. Every lot or parcel of concentrated feeding stuffs, as defined in Section 3 of this act, used for feeding farm live stock, sold, offered or exposed for sale in the State of Texas for use within this State, shall have printed on a tax tag, described in Section 5 of this act, a plainly printed statement clearly and truly certifying the number of net pounds of feeding stuff in the package, stating the name or names of materials of which such weight is composed where the contents are of a mixed nature, the name, brand or trade-mark under which the article is sold, the name and the address of the manufacturer or importer, the place of manufacture, such information as is required by Section 11, if any, and a chemical analysis stating the minimum percentages it contains of crude protein, allowing 1 per cent of nitrogen to equal $6\frac{1}{4}$ per cent of protein, of crude fat, of nitrogen-free extract, and the maximum percentage it contains of crude fiber; these con-

stituents to be determined by the methods adopted at the time by the Association of Official Agricultural Chemists of the United States. Mill products hereinafter mentioned shall have the following standard weights, viz.: Flour, one hundred and ninety-six (196) pounds per barrel, or forty-eight (48) pounds per sack; corn meal, bolted or unbolted, thirty-five (35) pounds per sack; rice bran, one hundred and forty-three (143) pounds per sack; rice polish, two hundred (200) pounds per sack; and other feeds made from cereals of any kind, whether pure, mixed, or adulterated, one hundred (100) pounds per sack. Fractional barrels and sacks shall weigh in the same proportion, and these weights shall be net and exclusive of the barrel or sack in which said product is packed. Any person, firm, or association of persons engaged in the manufacture of mill products of any character whatsoever, who shall use any bag, box, barrel, or any other receptacle into which to put such product other than one bearing the name of such mill manufacturing the same, shall be guilty of a misdemeanor, and upon conviction therefor shall be fined in any sum from one hundred dollars to one thousand dollars, or in addition thereto be confined in the county jail for a term of thirty days, or both such fine and imprisonment."

SEC. 2. The term concentrated commercial feeding stuffs, as herein used, shall not include hay and straw, the whole seed or grains of wheat, barley, rye, oats, Indian corn, rice, buckwheat or broom corn, or any other whole or unground grains or seeds.

SEC. 3. The term concentrated feedstuffs, as herein used, shall include wheat bran, wheat shorts, linseed meals, cottonseed meals, pea meals, cocoanut meals, gluten meals, gluten feeds, maize feeds, starch feeds, sugar feeds, dried brewer's grains, malt sprouts, hominy feeds, cerealine feeds, rice meals, rice bran, rice polish, rice hulls, oat feeds, corn and oat chops, corn chops, ground beef, or mixed fish feeds, and all other materials of similar nature not included in Section 3 of this act.

SEC. 4. Before any concentrated feeding stuff, as defined in Section 3 of this act, is so offered or exposed for sale, the importer, manufacturer, and party who causes it to be sold or offered for sale within the State of Texas for use within the State shall, for each and every feedstuff bearing a distinguishing name and trade-mark, file with the director of the Texas Agricultural Experiment Station a certified copy of the statement named in Section 1 of this act, and shall also deposit with said director a sealed glass jar or bottle containing not less than one pound of the feeding stuff to be sold or offered for sale, accompanied by an affidavit that it is a fair average sample thereof and corresponds within reasonable limits to the feeding stuff which it represents in the percentage of protein, fat and crude fiber and nitrogen-free extract which it contains. This shall not be construed to apply to farmers who grind their own feedstuff and who do not adulterate same.

SEC. 5. The manufacturer, importer, agent or seller of each concentrated commercial feeding stuff, as defined in Section 3 of this act, shall, before the article is offered for sale, pay to the director of the Texas Agricultural Experiment Station an inspection tax of ten cents per ton for each ton of such concentrated feeding stuff sold or offered

for sale in the State of Texas for use within this State, and shall affix to each lot shipped in bulk, and to each bag, barrel or other package of such concentrated feeding stuffs a tag to be furnished by said director stating that all charges specified in said section have been paid. The director of said Texas Agricultural Experiment Station is hereby empowered to prescribe the form of such tags and adopt such regulations as may be necessary for the enforcement of this law. Whenever the manufacturer, or importer or shipper of a concentrated feeding stuff shall have filed a statement made in Section 1 of this act, and have paid the inspection tax, no agent or seller of said manufacturer, importer or shipper, shall be required to file such statement or pay such tax. The amount of the inspection tax and penalties received by said director shall be paid into the State Treasury. So much of the inspection tax and penalties collected under this act shall be paid by the State Treasurer to the Treasurer of the Texas Agricultural and Mechanical College as the director of the Texas Agricultural Experiment Station may show by his bills has been expended in performing the duties required by this act, but in no case to exceed the amount of the inspection tax and penalties received by the State Treasurer under this act. Provided the excess, if any, for the next two years may be used as it accrues by the Board of Directors of the Agricultural and Mechanical College for the purpose of putting up a station administration building to provide the necessary offices and laboratory space, in order that the purposes of this act may be carried out.

SEC. 6. Any manufacturer, importer, or agent selling, offering or exposing for sale any concentrated commercial feeding stuff as defined in Section 3 of this act, without the statement required by Section 1 and the tax tags required by Section 5 of this act, or with a label stating that said feeding stuff contains substantially a larger percentage of protein, fat or nitrogen-free extract, or a smaller quantity of crude fiber than is contained therein, and any person violating any other provisions of this act shall, on conviction in a court of competent jurisdiction, be fined not less than one hundred dollars nor more than five hundred dollars for the first conviction, and not less than five hundred dollars nor more than one thousand dollars for each subsequent conviction.

SEC. 7. Any person who shall counterfeit or use a counterfeit of the tag or tags prescribed by this act, knowing the same to be counterfeited, or who shall use them a second time after the said tags shall have once been attached, shall be guilty of a misdemeanor, and on conviction thereof shall be fined in a sum not exceeding five hundred dollars, one-half of which shall be paid to the informer; which fine may be doubled or tripled at each second or third conviction, and so on progressively for subsequent convictions.

SEC. 8. All manufacturers and importers of concentrated commercial feeding stuffs, or dealers in same, shall, when requested, furnish the director of the Texas Experiment Station with a complete list of names or trade-marks of such feeding stuffs.

SEC. 9. The director of the Texas Agricultural Experiment Station shall cause one analysis or more to be made annually of each concen-

trated commercial feeding stuff sold or offered for sale under the provisions of this act. Said director is hereby authorized in person, or by deputy, to take a sample not exceeding two pounds in weight for analysis from any lot or packages of concentrated commercial feeding stuffs which may be in the possession of any manufacturer, importer, agent, dealer or buyer in this State, but said sample shall be drawn or taken in the presence of said party or parties at interest or their representative, and shall be taken from a parcel, lot or number of parcels which shall not be less than 5 per cent of the whole lot inspected, and shall be thoroughly mixed and divided into two samples and placed in glass or metal vessels carefully sealed and label placed on each stating the name or brand of the feeding stuff or material sampled, and the name of the party from whose stock the sample is drawn and the date and place of taking such sample, and said label shall be signed by the director or his deputy and the party or parties at interest, or their representatives present at the taking and sealing of said sample; provided, that where the party or parties at interest refuse to be present and take part in the sampling of the said feedstuffs, the director or his deputies may take said samples in the presence of two disinterested witnesses, one of said duplicate samples shall be retained by the director and the other shall be left with the party whose stock was sampled, and the sample or samples retained by the director shall be for comparison with the certified statements made in Sections 1 and 4 of this act. The result of the analysis of the sample or samples so prescribed, together with such additional information as circumstances advise, shall be published in reports or bulletins by the Texas Agricultural and Mechanical College from time to time.

SEC. 10. The term importer for all purposes of this act shall be taken to mean all such persons as shall bring into or offer for sale within the State concentrated commercial feeding stuffs manufactured without this State.

SEC. 11. Any person manufacturing, selling or offering for sale any adulterated feeding stuff within this State, shall, upon conviction therefor, be punished by fine of not less than twenty-five dollars and not more than two hundred dollars, or be imprisoned in the county jail for a term of not less than thirty days and not more than sixty days, or by both such fine and imprisonment. For the purpose of this act a feeding stuff shall be deemed to be adulterated if it contains any sawdust, dirt, damaged feed, or any foreign matter whatever, or if it is in any respect not what it is represented to be, or if any rice hulls or chaff, peanut shells, corn cobs, oat hulls, or other similar substances of little or no feeding value are admixed therewith; provided, that no wholesome mixture of feeding stuff shall be deemed to be adulterated if the true percentage of constituents thereof is plainly and clearly stated on the package and made known to the purchaser at the time of the sale. It shall be the duty of the director of the Experiment Station to examine, or have examined for adulteration, all suspicious samples of feeding stuffs and such other samples as may be desirable.

SEC. 11a. The director of the Experiment Station is hereby empowered to adopt standards or definitions for concentrated feeding stuffs

and such regulations as may be necessary for the enforcement of the law. The said director shall have the power to refuse the registration of any feeding stuff under a name which would be misleading as to the materials of which it is made up, or which does not conform to the standards and definitions aforesaid. Should any of said materials be registered and it is afterwards discovered that they are in violation of the above provisions, the said director shall have the power to cancel the registration ten days after notice. The director of the Texas Experiment Station is hereby empowered to adopt such regulations as may be necessary for the enforcement of all the provisions of this act.

SEC. 12. The fact that the present feedstuff law imposes a greater tax than is necessary for the enforcement of the provisions thereof and is indefinite and uncertain in some of its provisions, creates an emergency and an imperative public necessity that the constitutional rule requiring bills to be read on three several days be suspended, and that this act take effect from and after its passage, and it is so enacted.

(NOTE.—This law became effective July 11, 1907.)
