

CASH RECEIPTS*from the Sale of Texas***FARM COMMODITIES**

Farmers have been faced with periods of depression during the long depression years of the thirties, while farmers have sought to expand markets for their products and to establish a profitable margin between the cost of production and total receipts from farm marketing.

Agriculture did not have controlled prices and subsidies until 1933, when the government initiated various types of production and price programs. Initially, a few agricultural commodities were included in the programs. As existing government programs expanded and new ones established, other farm commodities were included. In all other industries

Boosted by war-time demand, cash receipts from farm marketing reached an all-time high in the late 1940's and early 1950's. Cash receipts from farm marketing dropped one-sixth during 1952-56. The drop came at a time when supplies had not increased and purchases by farmers to carry out essential farm operations were increasing at an unprecedented rate.

CASH RECEIPTS FROM THE SALE OF TEXAS FARM COMMODITIES

John A. Kincannon and George B. Strong*

-00-

PREFACE

There have been periods of farm prosperity as well as periods of depression during the long history of Texas agriculture. Texas farmers have sought to find and to expand markets for their products and to establish a profitable margin between the cost of production and total receipts from farm marketings.

Agriculture did not have controlled prices and subsidies until 1933, when the government initiated various types of production and price programs. Initially, only a few agricultural commodities were included in the programs. As existing government farm programs were modified and new ones established, other farm commodities were included in programs designed to raise the agricultural income on a par with other industries.

Agricultural production increased to record levels during and immediately after World War II. Increased agricultural production and marketings came with expansions in crop acreage and technological innovations which were encouraged and fostered by the war and postwar demand.

Cash receipts from farm marketings in Texas reached one billion dollars in 1942, two billion dollars in 1948 and was slightly under two billion dollars during 1953-57. Actually, total receipts from farm marketings were relatively stable from 1947 to 1957.

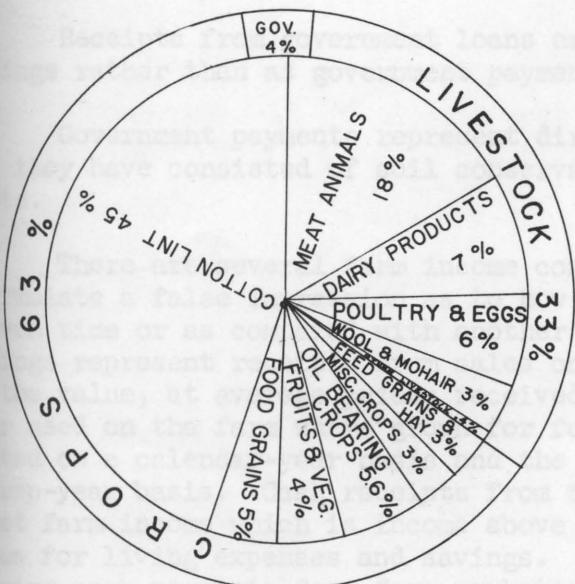

-00-

Cash receipts from farm marketings during 1924-57 ranged from one-third of a billion dollars in 1932 to two and one-third billions in 1951. They remained at a moderately high level during the late 1920's, but declined to a disastrously low level in the early 1930's. Farm income began to increase in the latter half of the 1930's with a general recovery of the nation's economy and through federal price programs for selected commodities.

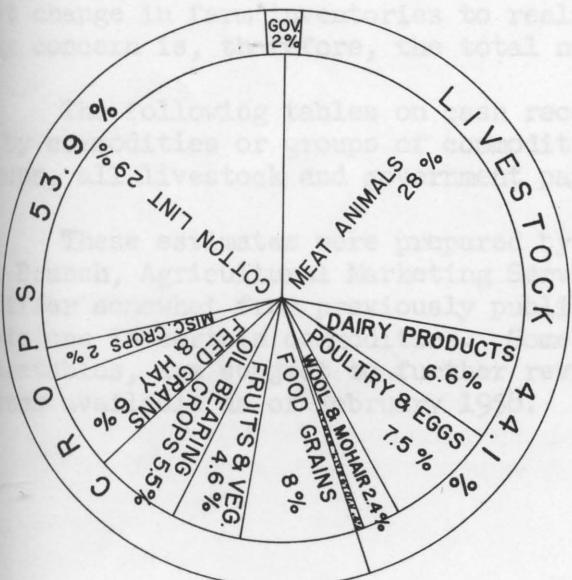

Boosted by war-time demand, cash receipts from farm marketings reached an all-time high in the late 1940's and early 1950's. Cash receipts from farm marketings dropped one-sixth during 1952-56. The drop came at a time when supplies and equipment purchased by farmers to carry out essential farm operations were increasing at an unprecedented rate.

*Respectively, assistant professor, Department of Agricultural Economics and Sociology, Texas Agricultural Experiment Station, College Station, Texas; and agricultural statistician, Agricultural Estimates Division, Agricultural Marketing Service U. S. Department of Agriculture, Austin, Texas.

Cash receipts from Texas farm marketing, as shown in Tables 2-11, represent estimates during 1924-56 for individual commodities and groups of commodities. Table 1 is a recapitulation of annual marketing receipts from all sources except government payments, 1924-57. In general, cash receipts from farm marketing are estimated by multiplying the price farmers received for their production by the volume of such products marketed.

AVERAGE CASH RECEIPTS FROM TEXAS FARM MARKETINGS, 1924-40

AVERAGE CASH RECEIPTS FROM TEXAS FARM MARKETINGS, 1941-56

Cash receipts from Texas farm marketings, as shown in Tables 2-11, represent annual estimates during 1924-56 for individual commodities and groups of commodities. Table 1 is a recapitulation of annual marketing receipts from all crops, livestock and government payments, 1924-57. In general, cash receipts from farm marketings are estimated by multiplying the price farmers received for their products by the quantities of such products marketed.

Receipts from government loans are included as cash receipts from farm marketings rather than as government payments.

Government payments represent direct payments to farmers. In recent years, they have consisted of soil conservation, Soil Bank, Wool Act and Sugar Act payments.

There are several farm income concepts that should not be confused lest one formulate a false impression as to how profitable the farming industry is at any given time or as compared with another farming era. Cash receipts from farm marketings represent receipts from sales only. The value of farm production represents the value, at average prices received by farmer, of total production whether sold or used on the farm where grown for feed, seed or food. Cash receipts are estimated on a calendar-year basis and the value of farm production is calculated on a crop-year basis. Cash receipts from farm marketings should not be confused with net farm income which is income above production expenses available to farm families for living expenses and savings. Realized gross farm income is calculated by summing cash receipts from farm marketings, home consumption, rental value of farm dwellings and government payments. Realized net farm income is realized gross income minus production expenses. Total net farm income is estimated by adding the net change in farm inventories to realized net farm income. The farmer's primary concern is, therefore, the total net farm income.

The following tables on cash receipts from farm marketings in Texas are given by commodities or groups of commodities. The three sources of farm income--all crops, all livestock and government payments--are shown in Table 1.

These estimates were prepared by the Farm Income Estimates Section, Farm Income Branch, Agricultural Marketing Service, U. S. Department of Agriculture. They differ somewhat from previously published data on farm income in Texas because of revisions in certain commodities. Some of the crop items, particularly fruits and vegetables, are subject to further revision. The figures shown represent the estimates available as of February 1958.
