Wellness: Your Choice

A Health Risk Appraisal

All of us want good health. But many of us do not know how to be as healthy as possible. Health experts now describe *lifestyle* as one of the most important factors affecting health. In fact, it is estimated that as many as seven of the ten leading causes of death could be reduced through common-sense changes in lifestyle. That's what this brief test, developed by the Public Health Service, is all about.

Its purpose is simply to tell you how well you are doing to stay healthy. The behaviors covered in this test are recommended for most Americans. Some of them do not apply to persons with certain chronic diseases or handicaps, or to pregnant women. Such persons may require special instructions from their physicians.

What Your Score Means to YOU

Scores of 9 and 10

Excellent! Your answers show that you are aware of the importance of this area to your health by practicing good health habits. You are setting an example for your family and friends to follow.

Scores of 6 to 8

Your health practices in this area are good, but there is room for improvement. Look again at the items you answered with a "Sometimes" or "Almost Never." What changes can you make to improve your score? Even a small change can often help you achieve better health.

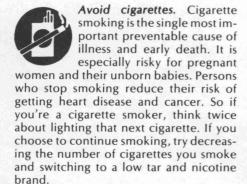

Scores of 3 to 5

Your health risks are showing! Would you like more information about the risks you are facing and why you need to change these behaviors? Help is available.

Scores of 0 to 2

Obviously, you were concerned enough about your health to take the test, but your answers show that you may be taking serious and unnecessary risks with your health. Perhaps you are not aware of the risks and what to do about them. You can easily get the information and help you need to improve, if you wish. The next step is up to you.

YOU Can Start Right Now!

Follow sensible drinking habits. Alcohol produces changes in mood and behavior. Most people who drink

are able to control their intake of alcohol and to avoid undesired. and often harmful, effects. Heavy, regular use of alcohol can lead to cirrhosis of the liver, a leading cause of death. Also, statistics clearly show that mixing drinking and driving is often the cause of fatal or crippling accidents. So if you drink, do it wisely and in moderation. Use care in taking drugs. Today's greater use of drugs-both legal and illegal-is one of our most serious health risks. Even some drugs prescribed by your doctor can be dangerous if taken when drinking alcohol or before driving, Excessive or continued use of tranquilizers (or "pep pills") can

cause physical and mental problems. Using or experimenting with illicit drugs such as marijuana, heroin, cocaine, and PCP may lead to a number of damaging effects or even death.

Eat sensibly. Overweight individuals are at greater risk for diabetes, gall bladder disease, and high blood pressure. So it makes good sense to maintain proper weight. But good eating habits also mean holding down the amount of fat (especially saturated fat), cholesterol, sugar and salt in your diet. If you must snack, try nibbling on fresh fruits and vegetables. You'll feel better—and look better, too.

everyone can benefit from exercise—and there's some form of exercise almost everyone can do. (If you have any doubt, check first with your doctor.) Usually, as little as 15-30 minutes of vigorous exercise three times a week will help you have a healthier heart, eliminate excess weight, tone up sagging muscles, and sleep better. Think how much difference all these improvements could make in the way you feel!

Learn to handle stress. Stress is a normal part of living: everyone faces it to some degree. The causes of stress can be good or bad, desirable or undesirable (such as a promotion on the job or the loss of a spouse). Properly handled, stress need not be a problem. But unhealthy responses to stress—such as driving too fast or erratically, drinking too much, or prolonged anger or griefcan cause a variety of physical and mental problems. Even on a very busy day, find a few minutes to slow down and relax. Talking over a problem with someone you trust can often help you find a satisfactory solution. Learn to distinguish between things that are "worth fighting about" and things that are less important.

Be safety conscious. Think "safety first" at home, at work, at school, at play, and on the highway. Buckle seat belts and obey traffic rules.

Keep poisons and weapons out of the reach of children, and keep emergency numbers by your telephone. When the unexpected happens, you'll be prepared.

Where Do You Go From Here:

Start by asking yourself a few frank questions: Am I really doing all I can to be as healthy as possible? What steps can I take to feel better? Am I willing to begin now? If you scored low in one or more sections of the test, decide what changes you want to make for improvement. You might pick that aspect of your lifestyle where you feel you have the best chance for success and tackle that one first. Once you have improved your score there, go on to other areas.

If you already have tried to change your health habits (to stop smoking or exercise regularly, for example), don't be discouraged if you haven't yet succeeded. The difficulty you have encountered may be due to influences you've never really thought about—such as advertising—or a lack of support and encouragement. Understanding these influences is an important step toward changing the way they effect you.

There's Help Available. In addition to personal actions you can take on your own, there are community programs and groups that can help you and your family make the changes you want to make. If you want to know more about support groups or about any of the topics above, contact your county Extension home economist. There's a lot you can do to stay healthy or to improve your health. Start today! HEALTHSTYLE, a U.S. Public Health Service publication, was adapted for use in Texas by Dr. Mary Ann Heussner, Health Education Specialist.
