AGRICULTURAL AND MECHANICAL COLLEGE

OF TEXAS.

Register for 1885-6; Announcement for 1886-7.

RAILROAD DEPOT, EXPRESS AND POSTOFFICE:

COLLEGE STATION, TEXAS.

HOUSTON, TEXAS:

J. J. PASTORIZA, PRINTER AND STATIONER.

1886.

the College, as the only existing branch of the State University, was expected to do the work of that entire institution, and not to devote itself to any specialty.

Under such circumstances academic work commenced, on the fourth of October, 1876. Students entered in large numbers; a career of unexampled prosperity seemed open to the well endowed and firmly established College. The military department, under its very efficient and earnest professor, soon became a prominent feature. The finely drilled, equipped and disciplined body of young men attracted the admiration of all who saw them. The number of students increased till temporary buildings were erected to accommodate them.

At one time six professors, with an assistant or two, were attempting to teach over 300 young men. This, too, without apparatus—agricultural or mechanical, chemical or physical. The students were crowded together. Discontent arose and complaints were heard. The attempt to accomplish impossibilities resulted in failure. Then it was that those who for various reasons sought grounds of complaint readily found them. Unfavorable criticism soon discovered the great perversion of the course of instruction. A hostile spirit was developed in the Legislature and in the newspapers. The College was named a nursery of military aristocracy. The farmers looked coldly upon it, or pronounced it a “humbug.” Students began to return to their homes.

Beset by complaints, growing louder every day, the faculty, with no means at hand of remedying the evils complained of, fell into dissensions among themselves. These at last necessitated a meeting of the directors on the eighteenth of November, 1879, at which meeting the College was reorganized by the election of a new faculty. But no change was made at this time in the course of study. The old chairs were merely filled with new professors. Fortunately, however, the new president saw clearly that nothing would permanently restore the popularity of the College but a strict compliance with the objects of its foundation, and to do this he at once addressed his energies. During the remainder of the session a plan of reorganization in the course of study was matured, whose main features consisted in the abandonment of the elective system

for close curricula, from which the ancient and modern languages were excluded, being made optional. There were two courses established—the agricultural and mechanical—and a professor was elected for the leading departments in each of these. Provision was made for supplying the mechanical department with a building, machinery and tools.

An appropriation was made also for equipping the agricultural department. The course of study at this time embraced four years. These changes, involving numerous important details, at last determined the adoption by the College of its legitimate work as a school of practical science. But much remained to be done in the same direction. At the meeting of the new board of directors—which, under a changed law, had been appointed by the Governor—the chairs of ancient and modern languages were consolidated, the courses of instruction were reduced to a period of three years each, and provision was made for assigning to the two courses ninety-three State students (three from each Senatorial District), for whose maintenance at the College the XVII Legislature had passed an appropriation. During the session ending in June, 1882, the agricultural and mechanical departments were both put in practical operation. The mechanical was especially successful. The agricultural, however, did not attract students. The causes of this were several, but chiefly the requirement in that department of *uninstructive* manual labor without compensation. It was found that students did not object to labor, however rough, provided it taught them anything adequate to its demands upon their time. The mechanical labor was all instructive and made attractive. The agricultural department consumed their time in such work as picking cotton and mending roads. That this was a very serious mistake in the policy of that department was soon seen, and at a special meeting of the directors in February, 1883, it was ordered that labor thereafter in the agricultural department should be instructive only, excepting of course such *voluntary* labor as students might perform for compensation.

At the meeting of the directors in June, 1883, much important business was presented. The president of the College had resigned in March; the professor of agriculture had sig-

nified his intention of resigning at the end of the session; the professor of languages had died in February. The Legislature had appropriated \$40,000 for the maintenancē of the College, and this was to be apportioned to the various objects for which it was greatly needed. During the meeting of the directors the professor of mechanics also tendered his resignation.* These important matters, demanding unusual consideration, were not disposed of without a special meeting. This was held on the nineteenth of July. It having appeared that, in view of the labor and responsibility involved in superintending the improvements about to be made, there must be a division of the president's duties, it was finally determined that the office of president should be abolished, that a business agent of the board of directors should be appointed to superintend the improvements and manage the finances of the College, while the faculty should elect one of their own number to discharge the academic duties pertaining to the presidency. The chair of physics was created and a professor elected to occupy it. The filling of the chairs of agriculture and mechanics was deferred to a meeting to be called subsequently. On the fifteenth of September, 1883, this meeting was held, and by the election of professors now occupying these chairs, the organization of the College was completed.

At the close of the session of 1884-5, the professor of English resigned his position, a new professor was elected to that chair and the department of physics was placed in charge of the professor of chemistry, with an assistant.

OBJECTS AND PRESENT POLICY OF THE COLLEGE.

The act of Congress which established the State Agricultural and Mechanical Colleges defined their objects. But under that act there have been founded as many different schools as there are States. These institutions have presented a variety of educational schemes, which have embraced nearly all gradations, from the classical and mathematical college to the manual labor industrial school. In view of this fact, it is proper to state as definitely as possible the interpretation given to the act of Congress by the authorities of this College, and the manner in which they are endeavoring to carry out its provisions.

Misapprehension of the present status of the College, founded upon its former reputation as a classical and military school, keeps alive a prejudice in the minds of many who are not fully aware of the radical changes that have taken place within the last five years. The following brief statements are therefore presented for the consideration of those who desire to be informed concerning these changes.

The general object of this College is to excite and foster in the minds of our people an enthusiastic appreciation of the attractiveness and value of those pursuits by which the material development of the country is advanced.

It is the business of this College to turn the attention of our young men from the overcrowded "learned professions" to those occupations which have brought abundant wealth and power to other States, and which are beginning now to attract and well repay the services of trained young men in Texas.

These objects are sought to be obtained—

By a thorough course of instruction in mathematics and natural science, with continual application of principles to work in the shops, fields, gardens, vineyard, orchard, pastures, dairies and other laboratories.

By relying upon text books as little as possible, and leading the student to seek information directly from observation and experiment.

By inculcating the dignity of intelligent labor—banishing the idea that the farmer or mechanic who is worthy of the name need be any less learned than the professional man.

By inducing in the mind of the student an enthusiastic love of nature and the study of natural laws, whereby agricultural and mechanical processes become invested with absorbing interest, and are pursued in a spirit which leads to progress and success.

EXPERIMENTAL WORK.

This furnishes the chief means of training students in accordance with these aims, and hence a most important subsidiary object of this institution is the discovery and dissemination of all sorts of information with regard to industrial pursuits.

MANUAL LABOR.

It is taken for granted that every farmer boy can learn at home such things as involve mere manual drudgery. It must therefore be understood that the student will not be required to waste valuable time in labor which is not instructive.

The education here given to young men is not intended to make mere laborers of them in the ordinary sense of the word. A student who graduates here may begin life as a field hand, but it is expected that by virtue of his superior training he shall be able speedily to find promotion, and easily fill the highest position of honor to which his ability may lead him.

MILITARY INSTRUCTION.

This is embraced by law in the objects of the College, and will be given such attention as is necessary for an *honest* compliance with the act of Congress.

ORGANIZATION AND GOVERNMENT.

The government of the College is vested in a board of directors, consisting of five members, appointed by the Gov-

ernor of the State. They are "selected from different sections of the State, and hold office for six years, or during good behavior, and until their successors are qualified."

FACULTY.

The faculty, consisting of seven professors, each in charge of a department of instruction, is responsible for the academic work of the College.

The professors have the aid of such assistants as it may be necessary from time to time to employ.

BOARD OF DIRECTORS.

HON. GEO. PFEUFFER, *President* New Braunfels.

COL. T. M. SCOTT Melissa, Collin Co.

JAS. G. GARRISON, Esq. Henderson.

HON. W. R. CAVITT Bryan.

GEO. M. DILLEY, Esq. Palestine.

PROF. L. L. MCINNIS, *Secretary* College Station.

FACULTY.

H. H. DINWIDDIE,

Professor of Chemistry and Physics and Chairman of Faculty.

L. L. McINNIS, A. M.,

Professor of Mathematics and Vice Chairman of the Faculty.

RUDOLPH WIPPRECHT,

Professor of Ancient and Modern Languages.

W. L. BRINGHURST, A. M., PH. D.,

Professor of English and History.

GEO. W. CURTIS, B. S. A.,

Professor of Scientific and Practical Agriculture
and Horticulture.

R. H. WHITLOCK, M. E.,

Professor of Engineering, Mechanics and Drawing.

LT. J. S. MALLORY, (U. S. A.)

Professor of Military Science and Commandant of Cadets.

R. F. SMITH,

Assistant in Mathematics.

WALTER WIPPRECHT, B. S. A.,

Assistant in Chemistry and Physics.

PROF. WHITLOCK,

Secretary of the Faculty.

PROF. WIPPRECHT,

Librarian.

NON-ACADEMIC OFFICERS.

GEN. W. P. HARDEMAN,
Business Manager.

L. L. McINNIS,
Treasurer.

J. D. READ, M. D.,
Physician.

B. SBISA,
Steward.

A. HARBERS,
Foremon of Shops.

J. S. FOWLKES, Bryan,
Fiscal Agent.

LOCATION AND DESCRIPTION OF BUILDINGS.

LOCATION.

The College is situated at College Station, in the County of Brazos, five miles south of Bryan, and ninety-five miles northwest of Houston. The Houston and Texas Central Railroad runs through the grounds, daily trains stopping at the station about 800 yards from the main building.

POSTOFFICE.

Letters are often delayed by going to Bryan. It is important, therefore, that all mail matter for the College should be addressed to "College Station," and not to Bryan.

MAIN BUILDING.

The main building stands on the highest point of the grounds. It is four stories high, made of brick, with mansard roof and towers. The rooms are all of high pitch and well ventilated. On the fourth story nearly half the space is occupied by the chapel. Two society halls, the armory, the athletic hall and three small rooms are also on this floor. On the third story are the mathematical section and instrument rooms and students' quarters.

On the second floor are the library, agricultural section room, chairman's office, chemical laboratory for qualitative work, and several students' rooms. On the first floor are the physical and chemical section rooms, chemical balance room and dark room, section rooms of mathematics and mechanics, offices of the commandant, business manager and treasurer, and janitor's room. There are broad halls running through each story at right angles to each other, and two sets of stairways, one in the middle, the other at the end of the building. The external appearance of the main building is shown on the right of the frontispiece.

SHOPS.

Back of the main building (seen a little to the left of it in the picture) is the carpenter shop. It is of two stories, fitted with benches and wood-working tools in separate sets for students. Power is supplied in this shop by a 12-horse power vertical engine. The boiler house and blacksmith shop are in the rear of the building. The metal-working shop is seen near the middle of the engraving. Its machinery is driven by a 20-horse power engine. The building is of brick.

MESS HALL.

This is seen on the left of the other buildings. It is three stories high, and is attached to the house which was formerly the president's residence. The first floor is occupied by the hall, steward's office, store rooms, kitchen, etc. The second and third floors are occupied by students' rooms, of which there are twenty in the building.

FARM BUILDINGS.

These are situated several hundred yards in the rear of the main building. They consist of two large barns, a milking shed and a piggery. One of the barns is new, and is fitted with stalls for the thorough-bred cattle, and storage rooms for implements and food. These buildings are supplied with water from a large tank, which is kept filled by a wind mill.

APPLIANCES FOR INSTRUCTION.

GROUNDS, FARM AND STOCK.

The farm, garden, orchard, barnyards and campus are included in the inclosures to the east of the station. The farm comprises about 175 acres. This is devoted solely to experimental culture and the production of forage for stock. The orchard of eight acres contains a large variety of young fruit trees more or less adapted to this climate. The garden affords experimental work to students and furnishes an abundance of vegetables to the mess hall. A young vineyard has been started, many of the vines are already bearing well. Back of these are the piggery, calf lots, barns and pastures of about 400 acres.

The College now owns nine head of registered cattle—Dutch Frisians, Galloways and Jerseys—besides a number of high-grade short-horns and common cows for present milk supply. The swine include Essex and Berkshires.

As soon as possible a creamery will be erected and arrangements perfected for giving instruction in butter making. On the west side of the railroad a pasture of 800 acres has been enclosed recently.

APPARATUS.

All departments of instruction are well supplied with implements and instruments of the latest and best forms. The agricultural department is equipped with hand tools, machinery and mules for farm work. The machine shops are well furnished with wood and metal working machinery and tools. The chemical and physical laboratories have recently received important accessions of apparatus.

The department of mathematics has also been supplied with additional sets of surveying and engineering instruments.

ENDOWMENT.

PERMANENT FUND.

In November, 1876, the Legislature formally accepted from Congress the gift of 180,000 acres of public land for the endowment of an Agricultural and Mechanical College. This land was sold for \$174,000, which sum was invested in seven per cent. State bonds. As under the act of Congress neither principal nor interest of this money could be used for other purposes than the payment of officers' salaries, at the time of the opening of the College there was an addition to the fund, from accumulated interest of \$35,000. This was invested in six per cent. bonds of the State thus furnishing an annual income of \$14,280.

GROUNDS.

The County of Brazos donated to the College 2416 acres of land, lying on each side of the Houston and Texas Central Railroad, five miles from Bryan and ninety five from Houston.

BUILDINGS.

These have been erected by successive legislative appropriations. Their approximate cost is as follows: Main building, \$100,000; mess hall and adjuncts, \$35,000; each of five professors' houses, \$3,000; two wooden buildings (one of which is now the carpenter shop), \$4,600 each.

Barn, sheds, bath houses, cisterns, fences, and all other improvements made previously to the year 1879 cost an additional sum of about \$28,000.

The total amount appropriated by the Legislatures to meet these expenditures was \$187,000.

During the years 1883-84 there were erected a new barn costing about \$1800, cattle sheds, \$1200, and brick machine shop \$4500. The equipment of buildings is thus fairly complete.

LEGISLATIVE APPROPRIATIONS.

1871—For buildings, etc.....	\$75,000 00
1874—For buildings, etc.....	40,000 00
1875—For buildings, etc.....	32,000 00
1876—For buildings, etc.....	40,000 00
1879—For library, apparatus, etc.....	15,000 00
1881—Improvements	4,987 44
1881-82—State students.....	15,000 00
1883-84—State students.....	6,000 00
1883-84—Expense of land suit.....	800 00
1883-84—Repairs, improvements, etc	40,000 00
1885-86—Repairs, improvements, etc	30,000 00
Total	<u>\$298,787 44</u>

Of this amount \$21,000 was given to students who were beneficiaries of the State, and although generally charged against the College, was of no benefit to it. Deducting this amount from the above, the total sum given to the College by the State to date is \$277,787.44.

The entire endowment of the College may be summed up as follows :

Productive funds, \$209,000.00; permanent improvements, \$270,000.00; land, not less than \$12,000.00.

COURSES OF STUDY.

There are two courses of study, the Agricultural and the Mechanical, each extending through three years.

The Agricultural Course embraces the departments of—

AGRICULTURE—Including botany, zoology, veterinary science, horticulture, etc.

CHEMISTRY—With special attention to agricultural chemistry.

PHYSICS—With special reference to meteorology.

MATHEMATICS—With special reference to surveying and farm engineering.

ENGLISH—Including literature and history.

MILITARY SCIENCE.

The Mechanical Course embraces the departments of—

MECHANICS—Including civil and mechanical engineering in their various branches.

MATHEMATICS—Pure and applied.

PHYSICS.

CHEMISTRY.

ENGLISH—Including literature and history.

MILITARY SCIENCE.

In both courses instruction consists largely of practice in the fields, shops and laboratories.

OPTION OF STUDIES.

The ancient and modern languages, except English, are optional, and may be studied under the professor of their department without charge.

In view of the great practical importance of the German and Spanish languages for business purposes in our State, special attention is given to these. A large number of the students are of German descent, and speak the language fluently. By association with these, young men may have continual practice in conversation out of the class-room as well as in it.

All students must pursue or prepare for either the agricultural or mechanical course.

They are permitted to choose between these upon entering the College, but will not be allowed to change from one to the other without reasons satisfactory to the faculty.

PREPARATORY CLASS.

In view of the fact that students often apply for admission whose age and physical development would warrant their entrance upon the course, but whose mental training is inadequate, the board of directors has established a preparatory class, with studies occupying one session. The attention of this class is given to the following subjects:

ENGLISH—Orthography, elementary grammatical exercises, composition.

DESCRIPTIVE GEOGRAPHY—Map drawing.

MATHEMATICS—Arithmetic.

One modern language, in addition to English.

Exercises in penmanship.

For entrance to this class the student will be required to show a fair degree of proficiency in reading, writing and the fundamental rules of arithmetic. Preparatory students are not attached to either the agricultural or mechanical course, and therefore have no practical instruction in the shops or other laboratories. These students have, however, the benefit of the industrial sentiment and the example of the other students to stimulate their interest in the main objects of the College, and, upon passing into the regular course, can choose more intelligently between the two courses than if they had not spent some time in the College. It is to be understood, however, that the preparatory class is in the nature of a temporary expedient, and necessarily limited in numbers. It is hoped that the continually increasing excellence of our common schools will in a short time render its continuance unnecessary.

CURRICULA.

AGRICULTURAL COURSE.

FIRST YEAR—THIRD CLASS.

FALL TERM.—Arithmetic reviewed, English Grammar, Composition, Declamation, Elementary Dynamics, Horticulture, Shop practice in wood working with hand tools, Free-hand Drawing.

WINTER TERM.—Algebra to Quadratic Equations, English Grammar and Composition, Declamation, History of the United States begun, Study of Heat, Electricity and Magnetism, Lectures on the breeding and care of Stock, Botany begun, Shop practice in wood-working with hand tools, Free-hand Drawing.

SPRING TERM.—Algebra completed, except Theory of Equations, English Composition and Declamations, History of the United States completed, Study of Sound and Light, Botany completed, Entomology, Field Work in Botany and Horticulture, Free-hand Drawing.

SECOND YEAR—SECOND CLASS.

FALL TERM.—Plane, Solid and Spherical Geometry, Essentials of English, Essays and Declamations, Descriptive Chemistry, Stock Breeding, Book-keeping begun, Instructive Agricultural Practice.

WINTER TERM.—Trigonometry — Plane and Spherical, Ancient History begun, Essays and Orations, Qualitative Analysis and Mineralogy, Book-keeping completed, Instructive agricultural practice.

SPRING TERM.—Surveying and Leveling, with field practice; Ancient History completed, Essays and Orations, Study of Cattle Feeding begun, Qualitative Analysis and Mineralogy, Instructive agricultural practice.

THIRD YEAR—FIRST CLASS.

FALL TERM.—Analytical Geometry (optional), Mediæval and Modern History, Orations, Study of Cattle-Feeding completed, Quantitative Analysis, Geology, Professional Theses, Experimental Agriculture.

WINTER TERM.—Elementary Mechanics, Calculus (optional), Mathematical Lectures, Development of the English Language and Literature, Orations, Veterinary Anatomy, Quantitative Analysis, Astronomy, Experimental Agriculture, Professional Theses.

SPRING TERM.—Theory of Equations and Lectures, Calculus (optional), Development of English Language and Literature, Lectures on English, Veterinary Medicine, Quantitative Analysis, Logic, Graduation Theses.

MECHANICAL COURSE.

FIRST YEAR—THIRD CLASS.

FALL TERM.—Arithmetic reviewed, English Grammar, Composition, Declamation, Elementary Dynamics, Shop practice in wood-working with hand tools, Mechanical Drawing.

WINTER TERM.—Algebra to Quadratic Equations, English Grammar and Composition, Declamation, History of the United States begun, Study of Heat, Electricity and Magnetism, Shop practice in wood-working with hand tools, Mechanical Drawing.

SPRING TERM.—Algebra completed, except Theory of Equations, English Compositions and Declamations, History of the United States completed, Study of Sound and Light, Shop practice with wood-working machinery, Mechanical Drawing.

SECOND YEAR—SECOND CLASS.

FALL TERM.—Plane, Solid and Spherical Geometry, Essentials of English, Essays and Declamations, Descriptive Chemistry, Mechanism and Machinery of Transmission, Shop Practice, Mechanical Drawing.

WINTER TERM.—Trigonometry—Plane and Spherical, Ancient History begun, Essays and Orations, Qualitative Analysis and Mineralogy, Mechanism and Machinery of Transmission completed, Shop Practice, Mechanical Drawing.

SPRING TERM.—Surveying and Leveling, with field practice; Ancient History completed, Essays and Orations, Catechism of the Steam Engine, Qualitative Analysis and Mineralogy, Shop Practice, Mechanical Drawing.

THIRD YEAR.—FIRST CLASS.

FALL TERM.—Analytical Geometry, Mediæval and Modern History, Orations, Catechism of the Steam Engine completed, Shop practice with metal-working machinery, Mechanical Drawing, Geology, Professional Theses.

WINTER TERM.—Elementary Mechanics, Calculus (optional), Mathematical Lectures, Development of the English Language and Literature, Orations, Civil Engineering, Steam Engineering, Mechanical Drawing, Designs for Machines and Structures, Shop Practice, Astronomy, Professional Theses.

SPRING TERM.—Theory of Equations and Lectures, Calculus (optional), Development of the English Language and Literature, Lecture on English, Mechanical Drawing and Shop Practice, Graduation Construction, Logic, Graduation Thesis.

In addition to the above, the chairman of the faculty delivers a lecture before the whole body of students once a week.

These lectures are devoted to outline expositions of physiology and the laws of health, and aim to enlighten young men with regard to their own bodies and the preservation of all their functions unimpaired.

POST-GRADUATE COURSES.

With the present standard of admission, students can not in three years become worthy of a degree which would confer honor upon them or the College. For those who desire degrees the following post-graduate courses have been established. They extend through one year, and embrace advanced studies in the departments named under each degree.

POST-GRADUATE CURRICULA FOR DEGREES.

CIVIL ENGINEER—C. E.

Engineering—Machinery and Mill-Work, *Rankine*; Drawing, Architectural. Reference: Steam Engine, *Rankine*; Bridges and Roofs, *Wood*; Civil Engineering, *Wheeler*; Field Book, *Searles*.

Mathematics—Descriptive Geometry, *Church*; Differential and Integral Calculus, *Church*; Analytical Mechanics, *Wood*; Surveying and Leveling, *Gillespie*; Curve Tracing.

Mineralogy and Geology—Laboratory work in analysis of minerals; *Dana's* Texts, with reference to standard books in library and to periodicals.

English—*Green's* History of the English People; Lectures. One Modern Language.

BACHELOR OF SCIENTIFIC AGRICULTURE—B. S. A.

Agriculture—Structural and Economic Botany; Use of Microscope; Veterinary Medicine; Farm management.

Chemistry—Chemical Philosophy; Analytical Work in Soils, Fertilizers and Agricultural Products; Original Research in Agricultural Chemistry. Text and Reference Books: *Cooke's* Chemical Philosophy, Standard Books in Library, Journals.

Mathematics—Elementary Mechanics, Liquids and Gases; Surveying and Leveling—selected portions.

English — *Green's History of the English People*; Lectures.
 to physics — Meteorology.

very Modern Language—optional.

form, BACHELOR OF SCIENCE—B. S.

causes. lture—Systematic and Structural Botany, Zoology and
 The tomology.

abundant — Chemical Philosophy, Organic Chemistry, Gen-
 eral Analysis, Original Research on any Chemical sub-
 delicate. Text and Reference Books: *Cooke's Chemical*

between philosophy; Standard books in library; Journals.

the yo natics — Differential Calculus, *Byerly*; Integral Calculu-
 consequ *Byerly*.

Instr — *Green's History of the English People*; Lectures.
 the utn — Same course as for the degree of M. E.

students, ern Language.

contin MECHANICAL ENGINEER—M. E.

The ical Engineering — Steam Engine, *Rankine*; Bridges
 r. and Roofs, *Wood*; Practice in Shops; Drawing, Mechan-
 cal; Original Designing. Reference Books: Machinery
 and Mill-Work, *Rankine*; Strength of Materials, *Wood*;
 Proportions of the Steam Engine, *Marks*; Elements of
 Machine Design, *Unwin*; Mechanical Drawing, *McCord*,
Minifie; Mechanical Dictionaries and Periodicals.

Mathematics — Differential and Integral Calculus, *Loomis* or
Peck; Analytical Mechanics, *Wood*; Descriptive Geom-
 etry, *Church*.

Physics — Advanced Discussion of Statics and Dynamics;
 Molecular Constitution of Matter; Correlation of Forces;
 Applications, with study of the construction and use of
 apparatus. Text and Reference Books: *Daniels*, Stand-
 ard Books in Library, Periodicals.

English — *Green's History of the English People*; Lectures.
 One Modern Language.

It is required for admission to study for these degrees that
 the candidate be a graduate in one of the courses, or pass
 satisfactory examinations upon subjects embraced in them.

Students for these degrees are under the general regulations
 of the College, but are not subjected to military discipline;
 they may, however, be required to assist in keeping order in
 the barracks.

MISCELLANEOUS INFORMATION.

MILITARY ORGANIZATION AND DISCIPLINE.

For the purpose of maintaining good order and discipline, as well as for the proper execution of the law of the State requiring military instruction of the students, they are organized into a battalion of two or more companies. The battalion is under the immediate command of the commanding officer. The officers, commissioned and non-commissioned, are taken for the most part from the first and second classes. They are appointed by the chairman of the faculty upon the recommendation of the commandant, and their appointment and rank is made to depend upon the active and soldierly performance of their duties, their sense of duty and responsibility, and their general good conduct and class standing.

These officers, not merely at drill, but at all times when on duty, assist in keeping good order in and around the buildings. In their various positions of graduated responsibility they not only aid most efficiently in maintaining discipline, but continually practice and are trained in the exercises of the highest qualities involved in obedience and command.

HYGIENE.

The buildings of the College stand upon the crest of a "divide," from which there is sufficient slope to carry off all drainage.

The soil is sandy, and mud and water disappear within a few hours after a rain. An extensive open prairie surrounds the College on all sides. There is a constant breeze—usually very strong. The water used by students is obtained from cisterns, supplied from high clean roofs.

The rooms of the students are inspected at least twice a day, and are required to be kept neat and well ventilated.

Students have the use of bath rooms supplied with cistern water.

There is in the vicinity of the College apparently nothing to produce malarial sickness, and as a matter of fact there is very little of it here. All serious sickness has been in the form of pneumonia and measles, which do not depend on local causes.

The food served in the mess hall is admitted by all to be abundant, palatable and wholesome. It is therefore very desirable that parents should refrain from sending boxes of delicacies to their sons. The practice of eating from these between meals is undoubtedly very injurious to the health of the young men, and the surgeon has traced more sickness and consequent loss of time to this one cause than to any other.

Instruction in Physiology and Hygiene is regarded as of the utmost importance, and is given to the whole body of students by the chairman of the faculty, in weekly lectures continued through the session.

The drill, farm and shop practice, and athletic sports furnish abundant and wholesome exercise for the students.

HOSPITAL.

Ample and comfortable quarters are provided for the sick, and the surgeon living on the grounds will give his attention to all students without charge other than the regular medical fee of five dollars paid by each student upon entrance.

RELIGIOUS AND MORAL CULTURE.

Every Sunday afternoon there is preaching in the chapel by one of the ministers from Bryan, and all students are expected to be present. And the faculty will try with all the means in their power to protect and develop the moral character of those committed to their charge.

The situation of the College is peculiarly favorable for the preservation of the morals of students. The nearest town is distant five miles, and it is almost impossible for any student to go to Bryan, even for a short time, without his absence becoming known to the authorities. All the temptations that beset young men in cities are entirely absent here. No student is ever permitted to visit Bryan at night except by request of his parent or guardian.

LITERARY SOCIETIES.

There are two literary societies in the College, the Austin and the Calliopean. They meet weekly in their respective halls for practice in debate, literary composition and declamation. Public debates are held frequently during the session, and speakers are invited to deliver addresses.

LIBRARY AND READING ROOM.

Through the liberality of the Legislature a valuable library and reading room have been provided for the use of students, and additions will be annually made.

The library now comprises standard works of history, biography, agriculture, mechanics, engineering, mathematics, natural sciences, law and political economy, mental and moral philosophy, poetry, general literature, and reference.

Gifts of books and magazines will be thankfully received. Back numbers of literary and scientific periodicals will be especially useful in completing the files already begun.

GENERAL REGULATIONS.

It is understood that every student, upon entering the College, pledges himself to an honest effort to observe the regulations, and sustain the authorities in the maintenance of discipline.

The strictest attention to study, and the most exact punctuality in attendance on recitations and other duties, will be made the condition of every student's continuance at the College; and any student who without authority absents himself from recitation or any other duty, deserts his class, or refuses to attend when warned, shall be dismissed, or less severely punished, at the discretion of the faculty.

Students are forbidden to enter into combinations under any pretext whatever. One who shall begin, excite, cause or join in any boisterous or riotous conduct, or become a party to any agreement to avoid or violate any regulation, to hold no intercourse with a comrade, or to do any act to the prejudice of good order and military discipline, shall be dismissed.

Students are prohibited, under penalty of dismissal, from having in their possession ammunition, weapons or arms not

issued for the performance of military duty; nor shall these be retained loaded in quarters under any pretext.

A student who shall drink, or bring, or cause to be brought within the cadets' limits, or have in his room, or otherwise in his possession, any fermented or intoxicating liquor, or fruits or viands preserved in intoxicating liquor, shall be dismissed, or otherwise punished, at the discretion of the faculty.

No student shall have in his possession, or play at, cards, or games of chance, engage in a raffle, or in any manner wager money or other things, on penalty of dismissal.

Permission to attend private parties or places of public amusement will not be granted during the term.

No cadet can be granted a leave of absence during a term of twenty weeks, without an urgent necessity.

No student is allowed to leave the College during the session without permission of the chairman of the faculty on application through the commandant.

A student who shall cut, mark, or otherwise injure or deface the buildings, furniture or appurtenances; the trees, shrubbery, green-sward, grounds, fences, stables or out-houses; or who shall lose, injure, destroy, or improperly dispose of the arms, accoutrement, or other property of the College, shall make good all damage, and be dismissed or otherwise punished, according to the nature of the offense.

When the responsibility for the destruction of State property cannot be fixed upon any one, the amount of the damage will be assessed against the occupants of a room or division, or the entire body of students, as the case may require.

Students receive the admonition and counsel of the chairman of the faculty before being subjected to any penalty, except in case of flagrant offenses. Those who are habitually neglectful of their duties, or who do not regularly attend their classes, will be required to withdraw from the College.

To each recorded delinquency a number of from one to ten, proportional to the degree of the offense, in a moral and military view, is assigned to express demerit.

If any student receives 150 demerits for the whole or any part of half year, or 250 for a greater period, he shall be declared deficient and dismissed.

TO PARENTS AND GUARDIANS.

The necessity for uninterrupted attention to their studies on the part of students can not be too strongly urged. It is impossible for a young man to become interested in his work here if he is permitted to leave the College whenever any special amusement is advertised in our neighboring towns or cities.

It is therefore respectfully asked that those who send their sons or wards here do not, except in the most pressing emergencies, request permission for them to leave their studies for any purpose whatever.

Whenever a parent or guardian shall leave the application for special permits to the discretion of the son or ward, the College authorities will judge of the propriety of granting such permits.

SPECIAL INFORMATION

CONCERNING ADMISSION TO THE COLLEGE.

REQUISITES OF ADMISSION.

To enter the College an applicant must be in his sixteenth year, or at least must have attained a degree of physical and mental advancement corresponding to that age. He must be free from contagious or infectious disease or any deformity or defect that would unfit him for the performance of his duties as a student of this College. He may be required to furnish evidences that he has not been dismissed from another institution of learning and that his moral character is good.

The mental attainments necessary for entering upon the courses of study comprise a fair knowledge of arithmetic as far as proportions, of descriptive geography and of elementary English grammar and composition.

The reputation of this College for good discipline has caused parents in some instances to apply for admission for boys that had proved unmanageable and thoroughly vicious at other institutions. It is desired that such applications be not in the future presented.

MATRICULATION.

Upon arrival at the College, young men intending to enter will report as soon as possible to the chairman of the faculty. From him they will go to the treasurer, to whom they will pay their prescribed entrance fees, and then to the several professors for enrollment in classes, and to the commandant for assignment to company and quarters.

Upon entering the College, every student may be required to state upon honor that he has no fire-arms or other deadly weapons in his possession, or if he has such, to deposit them with the chairman of the faculty.

As there is no hotel at the station, and the College is nearly half a mile distant, new students or other strangers would be saved much embarrassment by arriving on a day train.

MARKS AND EXAMINATIONS.

Records of the standing of each student are kept by the professors of the several departments. This standing is indicated by a system of marks based upon 100 as a maximum, with decimal gradations.

A general examination is held at the close of the session. The result of this, combined with the session mark, gives the final standing of the student.

A monthly report is mailed to the parent or guardian of each student, showing his class standing, conduct and health.

Students entering the third class at the beginning of the session and failing to pass an examination at the end of the fall term (Dec. 6) will be assigned to the preparatory class.

GRADUATION.

The diploma of the College will be conferred upon all students who complete either of the prescribed three years' courses of study, and pass satisfactory examinations on all the branches embraced therein. Each candidate for graduation is required to submit to the professor in charge of the leading department of his course a graduation thesis; and he may be required to read this, or some other essay approved by the faculty, on commencement day as part of the public exercises.

To every student who completes satisfactorily any one of the optional studies—German, French, Spanish, Latin—a special diploma on that subject will be granted.

Each student receiving a diploma will be required to pay \$5.00 therefor.

HONORS.

The three students most distinguished for scholarship and deportment in each of the classes, as determined by marks and examinations, are known as "honor men," and their names appear at the head of their several classes in the catalogue, though this rule may be modified if the number of students

in any class or their scholarship shall not warrant such distinction.

A valedictorian is elected by the members of the graduating class from their own number.

A member of the second class is chosen by his classmates to reply to the valedictorian.

Military promotion is an honor attainable by general good conduct and manly behavior, as well as excellence in studies.

Professors from time to time offer gold medals or other prizes for excellence in studies.

No academic honor will be conferred upon any student who may be deficient in conduct for the session.

EXPENSES FOR SESSION OF NINE MONTHS.

Incidental Fee.....	\$ 5 00
Physician's Fee.....	5 00
• Fall Term	45 00
Winter Term	50 00
Spring Term	45 00
Total.....	<u>\$150 00</u>

In addition to the above a deposit of \$5 will be required to cover possible damage to the College property. If not expended, this, or as much of it as is left to his credit, will be returned to each student who remains to the end of the session.

The incidental and physician's fees are payable on entrance, whether at the beginning of or during the session, and cannot be refunded.

Payment for each term must be made in advance, but a student entering during a term will be charged only for the remainder of that term.

A student once entered for the term, and having paid for that term or balance of it, as required by resolution of the Board of Directors, shall forfeit all claims to said payment in case of voluntary withdrawal from the College before the expiration of said term, except in case of sickness.

If, on any account, the prompt payment of dues should be delayed, the treasurer will mail to the parent or guardian of the student the following notice:

NOTICE TO PARENTS AND GUARDIANS.

Your attention is respectfully directed to the following resolution passed by the Board of Directors of the Agricultural and Mechanical College of Texas:

Resolved, That it shall be the duty of the Treasurer to notify parents and guardians ten days after the date upon which a term payment is due, that if same is not paid within twenty days thereafter (thirty days from time the payment was due), the student so in arrears will be dismissed.

LOUIS L. McINNIS, *Secretary of the Board.*

Payment due.....188... Notice sent..... 188...
Limit expires.....188...

All communications in reference to accounts of students should be addressed to Prof. L. L. McInnis, treasurer.

ROOM FURNITURE, CLOTHING, ETC.

The College will furnish the following articles free of charge: Bedsteads, mattresses, pillows, tables, washstands, chairs, wardrobes, lamps, buckets, basins and slop cans.

Students should bring with them—Pillow cases, blankets or comforters, sheets (for single beds), towels, comb, brush, tooth brush, clothes bag, and other articles of personal apparel and use.

UNIFORM, BOOKS AND STATIONERY.

A neat uniform of cadet grey cloth is furnished here at a cost of from \$15 to \$18, depending upon size.

These uniforms are made by contract, and students are required to purchase from the contract tailor in order that uniformity may be secured in the cut and quality of the clothing, and that parents may be protected from imposition by irresponsible persons. The contract suits are carefully inspected by the commandant of cadets, and thus the full value of the money expended for them is secured.

Books and stationery may be obtained here. They will probably cost about \$5 to \$8 per session.

BEGINNING OF THE SESSION.

The eleventh annual session will open on Monday, September 6th, 1886, and close on Tuesday, June 7th, 1887.

Students should not arrive at the College earlier than Saturday, September 4th.

As the number of students is necessarily limited by the accommodations provided for dormitories, it is advisable that application for admission should be made early.

INTERIOR OF QUALITATIVE CHEMICAL LABORATORY.

DEPARTMENTS OF INSTRUCTION.

DEPARTMENT OF CHEMISTRY AND PHYSICS.

PROFESSOR H. H. DINWIDDIE.
ASSISTANT, WALTER WIPPRECHT.

CHEMISTRY.

This subject will be introduced by the study of Inorganic Chemistry, passing into a brief course of Organic Chemistry. The attention of students will be directed to the historical development of the science and to the phases of chemical theory which have successively obtained among scientists.

During this part of the course there will be constant practice in the use of symbols and chemical calculations. As far as possible illustrative experiments will be made by the students themselves. Special study will be given to technical processes and the construction, arrangement and working of apparatus for the manufacture of chemicals for commerce.

After a fair knowledge of general principles has been acquired Practical Chemistry will be taken up, and the instruction will consist of actual work in the laboratory. It will commence with the use of the blowpipe, simple glass working and fitting up of apparatus, continuing as far as time will permit through a course of analysis, wet and dry, qualitative and quantitative, gravimetric and volumetric.

Advanced students will be required to investigate specialties, to keep careful notes of their work and to present results more or less original in the form of memoirs to be read before the class or handed to the professor. Agricultural students will devote their time mainly to analysis of soil, manure and plants. Mechanical students may take up any subject directly connected with manufacturing chemistry.

It will be the object of this department to equip its graduates with such practical knowledge and skill as will be available at once upon leaving College.

The laboratory consists of four rooms, two of which are large (46x22½ ft.) and capable of accommodating each about twenty students at their desks. One is fitted up for this number of students in qualitative analysis : the other which, is on the first story, has a cement floor and is used for furnace work, and generally by the more advanced students in quantitative analysis. Adjoining this is a balance room in which the balances are secured from fumes and firmly supported, and various pieces of delicate apparatus are kept.

The rooms are supplied with gas. A small Shipman steam engine raises water from a large underground cistern, and this is distributed under a head of about 25 feet for filter pumps &c. The same engine furnishes power for a dynamo and for various other purposes.

A fourth is small and has no window and is used for a store room and photographic dark room.

In order to present definitely the facilities for practical work and experimental instruction in this department, the following list of more important pieces of apparatus is given : Two fine analytical balances, three ordinary ones, gas holders and generators, filter pumps, full supply of retorts; receivers, flasks, lamps, evaporating dishes, burettes, hydrometers, volumetric glassware, glass-blowers' table, gas closets, tanks and sinks, two assay furnaces with muffles, crucibles, etc., combustion furnaces, stock of chemicals and collection of minerals. Among new pieces may be mentioned a large Geissler pump, Hempel's gas apparatus. A Soleil-Laurent saccharimeter, an Elliot's gas apparatus, colorimeter, Sprengel's pump, a large digester, a still, a water bath, a photographic outfit complete, and a fine Fuess' goniometer. In short, the laboratory is well prepared for any work in well established methods of analysis.

The following text and reference books are used : Richter's Chemistry, Caldwell's Agricultural Chemistry, Church's Laboratory Practice, Fleischer's Volumetric Analysis, Dana's Mineralogy, Sutton's Volumetric Analysis, Remsen's Chemistry, Roscoe & Schorlermer's Chemistry, Watt's Chemical Dictionary, Naquet's Legal Chemistry, Fresenius' Analytical Chemistry, Prescott's Analysis, Blyth's Foods and Poisons,

INTERIOR OF PHYSICAL LABORATORY.

Mess. Zink, N.Y.

and other standard works. American and foreign periodicals are also accessible to students.

PHYSICS.

Work in this department will commence with the study of elementary Physics in the Third Class, passing to a more advanced course in the Second Class.

The apparatus of the department is excellent and extensive, being sufficient for illustration and experiment throughout the entire course. Besides, the shops of the Mechanical Department will be most useful as a laboratory for practical applications of the study of Physics. With this aid students may construct special pieces of apparatus for illustration of any subject.

The following are some of the pieces of apparatus found in the Physical Laboratory: Powerful air-pump, Atwood's Machine 3-inch spark induction coil, telegraphic apparatus, galvanometer, plunge battery, Grove's battery, other batteries, dielectric machine, magneto-electro machine, electro-magnetic machine, Toepler-Holtz machine, jars, electro-magnetic engine, dynamo machine, Geissler's tubes, siren, Crouch's best binocular microscope and fittings, polariscope and accessories, spectroscope, radiometer, hydraulic ram, hydrostatic and hydrodynamic apparatus, models of machines and mechanical powers, etc.

Gage's Physics is used as a text book. The works of Ganot and Deschanel and other standard authors are used for reference.

DEPARTMENT OF MATHEMATICS.

PROFESSOR, L. L. MC INNIS, A. M.

ASSISTANTS, $\left\{ \begin{array}{l} \text{J. S. MALLORY,} \\ \text{R. F. SMITH.} \end{array} \right.$

Instruction in this department will have for its aim, to lead the student into the habit of thoroughly analyzing every subject. He will be taught to accept nothing as true in mathematical science, unless rigidly demonstrated, and he will be required so to demonstrate all rules and principles before ap-

plying them to the solution of problems. He will be made to realize the importance of this science, in the principle affairs of life, as well as its value in strengthening and disciplining the intellectual powers, by carefully selected and original problems throughout the course, involving the application of its principles to the art, industries and applied sciences of to-day.

The principles enunciated and established in the texts will be constantly supplemented by oral and written lectures tending to show their application.

In the application of mathematics to mechanics the student will be taught the doctrine of forces—their composition and resolution, laws of gravity, laws of motion, etc. A series of lectures on the History, Utility and Philosophy of Mathematics will be given.

In surveying and leveling much attention will be devoted to making the student familiar with the practical work.

He will have explained to him the construction, principles, and use of all the instruments employed in this useful branch of mathematics. He will be instructed in Rectangular, Compass, Transit and Plane Table surveying, and will be required to use these instruments in the field in laying out and dividing land, and will draw accurate plats and maps of his work. He will also have practice with the solar compass with which lines are run by the sun independent of the needle.

In leveling he will have practice in determination of difference of level, section leveling, leveling for section; cross section work, drainage leveling and determination of volume of excavation and embankments.

EQUIPMENT.

Special attention is invited to the complete equipment of this Department with surveying and engineering Instruments, which include the following :

Engineer's Transit.

Surveyor's Transit with Solar Attachment.

Plane Table, complete.

Burt's Improved Solar Compass.

Railroad Compass.

Vernier Compass.

Engineer's Level.

Farmer's Level for Drainage.

Chains, Leveling Rods, Poles, etc., etc.

For instruction in Geometry, plane, solid, spherical, descriptive and analytical, the department is supplied with a complete set of Schröder's mathematical models, imported from Germany for this institution.

TEXT AND REFERENCE BOOKS.

Venable's Arithmetic, Brooks' Philosophy of Arithmetic, Wentworth's Algebra, Davies' Bourdon, Venable's Geometry, Schuyler's Trigonometry, Mensuration, Surveying and Leveling, Gillespie's Surveying, Church's Analytical Geometry, Peck, Bowser and Howison; Mechanics, Wood, Peck, Smith, Bartlett — Calculus, Church, Bowser, Byerly, Davies' Dictionary of Mathematics.

DEPARTMENT OF LANGUAGES.

PROFESSOR RUDOLPH WIPPRECHT.

This department comprises the Ancient and Modern Languages, which are prosecuted, as optional studies, during three years.

While the instruction in the ancient languages consists mainly on the thorough systematic drilling of the students in the grammatical analysis of the languages, so as to make them subservient to a critical and correct use of the English, in exercises from Latin into English, or from English into Latin, and in as comprehensive a course as possible of reading, the instruction in the Modern Languages is not confined to imparting theoretical knowledge, but is intended for the practical benefit of the student, viz: to enable him to speak them. Thus the study of text books is supplemented by oral and written translations, blackboard exercises, and, as soon as practicable, by conversation in and out of the class room.

A knowledge of German and Spanish is becoming more and more a necessity in our State, and the study of them is recommended to all.

DEPARTMENT OF ENGLISH LANGUAGE,
LITERATURE, AND HISTORY.

PROFESSOR W. L. BRINGHURST, A. M. PH. D.

ASSISTANT, J. S. MALLORY.

The general aim of instruction in this department is to make thorough, practical English scholars.

The following subjects are taught:

I. *English Language and Literature.* Embracing the grammatical and rhetorical structure of the language, its history and development, synonyms and comparative philology. That the student may thoroughly master the principles of his mother tongue, daily recitations are accompanied with practical exercises on the blackboard in writing, spelling, analysing and criticising. Constant practice in declamation and composition is required.

The historical development of English literature is carefully traced, and the student is made as familiar with the works of our great authors in poetry, history, philosophy, fiction, science, etc., as the time allotted will permit. Lectures are delivered to the classes, and original reviews, essays and compositions are required.

Text Books. Patterson's English Grammar, Whitney's English Grammar, Quackenbos's Composition, Welsh's Essentials of English, Welsh's Development of English Language and Literature.

II. *History.* The object of this course is to give the student a thorough knowledge of the history of his own country and of England, and an outline of the world's history, ancient and modern. Special attention is given to the history of the people, and of the gradual development of the civilization, power, laws, constitution and political system of our republic. The department is well supplied with wall-maps, globes, etc.

Text Books. Stephen's History of the United States, Fisher's Outlines of Universal History.

For reference and private reading, the College Library supplies an admirable collection of histories, dictionaries, biographies and encyclopedias, besides works of poetry and general literature.

DEPARTMENT OF AGRICULTURE.

PROFESSOR GEO. W. CURTIS, B. S. A.

The design of the course in agriculture is to furnish a broad and liberal education, thoroughly practical in all its details, giving it such direction as will tend to produce fitness for the higher demands of agricultural industry, and meet the requirements of educated citizenship.

Manual labor is divided into two classes, viz:

First.—Uninstructive: comprising all those operations on the farm and in the dairy, garden or orchard from which benefit shall accrue to the College and not to the student.

Second.—Instructive: comprising all those operations which are necessary to a thorough practical knowledge of the various branches taught, and from which the benefits accrue to the student.

The first is paid for by the department at rates varying from six to ten cents per hour. A few DETAILS will be given to MERITORIOUS students, by means of which a part of their expenses may be paid.

Instructive labor is amply compensated for by the instruction given, and comprises the various operations in garden and orchard culture, and conduct of experiments bearing directly on the agricultural problems of the age.

In the study of our domestic animals, careful attention is given to the merits and demerits of different breeds—to their care and management; and remedies are given for common and simple diseases.

In Horticulture the aim is to give such instruction as will enable our students to take proper and effective care of the home orchard and garden. How to select, bud, graft, plant, train and prune, with practical work in the various instructive branches connected with the subject.

In Botany the aim is to make the student familiar with the common plants, beneficial, injurious and neutral, and especial attention is given to our native and cultivated grasses. In our experimental plat we have beds of the grasses, and aim to give practical lessons in their economic value. We also touch

upon the various fungus growths prevalent, such as rust, ergot, etc.

In Entomology we aim to give a brief but thorough synopsis of those insects injurious to the fruit and agricultural produce of the country, with discussion of the various means of extermination and prevention.

Armsby's Cattle Feeding is conveniently divided into three parts: taking up first a condensed statement of *the general laws of animal nutrition*; second, *the chemical composition of feeding stuffs*; third, *the feeding of farm animals*. We pursue each head successively, thus giving a thorough knowledge of the principles and reasons upon which *profitable cattle feeding* is based, either upon the range or in the yard.

In Veterinary Anatomy it would be impossible for the students to understand thoroughly the subject in so short a time without the aid of the skeleton. The class in this study have prepared and mounted a complete skeleton of the horse, under the direction of the Professor of Agriculture, which is used continually in the lecture room during the study of anatomy.

A short synopsis is given of the various classes of drugs and their action — both physiological and therapeutical. The injuries and diseases to which the horse is most commonly subject, and their treatment, are taken up and thoroughly studied by means of lectures—the class assisting in dressing and treating cases which occur from time to time.

The object of this branch of instruction is to protect our student in after life from the numerous quacks who infest the country, by enabling them to diagnose and properly treat all ordinary cases without the aid of a skilled veterinarian.

Believing that system is essential to success in any pursuit, and as essential to the farmer and stockman as to the merchant, we have added to this course, during the first term of the second year, a careful and thorough course in BOOK-KEEPING. We are confident that this addition will supply a want long felt among the farmers of our State, and induce a systematic course in the after business relations of our students which shall greatly enhance their success.

In connection with this study, lectures will be given on the laws governing and relating to commercial paper, as applied especially in our own State.

Students in the agricultural department are given instructive practice in general farm carpentry — the object being to give them a certain skill in the use of ordinary tools which will save the expense of a carpenter for all ordinary repairing, etc.

The supplementary studies throughout the course are so arranged as to be of the greatest possible value in after life; among them we would call especial attention to the studies *Chemistry* and *Surveying* as having a peculiar value in connection with agricultural industry. Military drill is conducted during the entire course in conformity to the act of Congress establishing agricultural and mechanical colleges in the various States. All books used in the course may be secured at the *College Book Department* at a slight advance on publisher's prices. No books should be purchased by the student before arriving at the College, as the proper edition may not be secured.

Communications relative to the department may be addressed to the professor.

Text and Reference Books.—Barry's Fruit Garden, Gray's Botany, Armsby's Cattle Feeding, together with numerous standard works in the library.

DEPARTMENT OF MECHANICAL ENGINEERING AND DRAWING.

PROFESSOR R. H. WHITLOCK, M. E.

This department is intended so to combine theory and practice that, after deriving a theoretical knowledge of a subject from the text books of standard writers, the students may go into the shop and apply that knowledge in a thoroughly practical manner. With this theoretical preparation the mind grasps the salient points; and avoids the difficulties of the more practical part of the work. The work is carried on by the aid of practice in the shops and drawing room, and by text books and lectures.

ENGINEERING.

This subject being one which contains many minor divisions the text book is often superceded by lectures. These are generally so chosen as to enlarge on some topic introduced in the text, but which needs a detailed discourse to enable the student to fully master the subject. Some of the important topics treated are:

Strength of Materials.—Treating of the strength of the different materials used in construction when they are subjected to the different strains which must necessarily be brought upon them when they are in actual use.

Masonry.—Giving full descriptions of materials used, with the chemical and physical properties of the ingredients, the different styles, etc.

Foundations.—Describing the best practice in laying and preserving foundations, and giving particular attention to such soils as necessitate extraordinary precautions being taken for the preservation of the structure.

Roadways.—Their location and details, including railroads, and the methods of laying them, out.

Shafting.—Its strength and uses, with calculations of sizes required under certain circumstances.

Pulleys.—Speed, transmission of power, with methods of decreasing or increasing speed by their uses.

Before graduating from this department each student must place in the hands of the Professor in charge, a thesis which treats of some mechanical subject, and which shall be declared satisfactory by him.

MECHANICAL DRAWING.

This subject is taken up when the student has little or no knowledge of the instruments used, and but little idea of the benefits to be derived from a thorough skill in their manipulation. At the start the principal object is to train the mind, eye and hand to work in unison. In order to accomplish this, the first drawings consist of problems, which, though very simple, contain principles which will be of use all through the course of drawing. Thus the mind is trained as well as the hands, and after proceeding in this manner until all difficulties

INTERIOR OF MACHINE SHOP.

are surmounted, the nature of the problems gradually changes until that point is reached where they may be applied to mechanical work. First the screw, then the teeth of the wheels, and so on, gradually drawing out the skill of the embryo draughtsman until he can make a "working drawing" of the most complicated pieces of machinery. This, like the preceding subject, is intimately connected with actual practice, as shown by the fact that we take our measurements from machines which are the results of the best practice of the age. Again, in drawing toothed or gear wheels, we compare theory with practice in such a manner as to point out the desirability of combining them in our work. The fear of being able merely to copy other drawing is avoided from the beginning as each drawing is made from the measurements taken by the student, and is finished up as if the machine was to be actually constructed. In time the designing of machinery will be taken up, thus enabling the student to put his own ideas in such a shape as to show others what he thinks, and in such a manner as to admit of the construction of the machine from his drawings. Each student must provide himself with a set of drawing instruments, and is advised not to make his purchase before entering the College, as arrangements have been made with reliable makers to furnish instruments on advantageous terms.

SHOPS AND SHOP WORK.

• PROF. R. H. WHITLOCK, SUPERINTENDENT.

A. HARBERS, FOREMAN.

The present shops are situated in a two-story frame building, 83x34 feet, and have a boiler room attached. In addition to this there is a one-story brick building, 80x35 feet, in which are placed new tools, of the latest patterns, which represent the best practice of the age. Here the student receives practical and systematic instruction, beginning with the simplest exercises and gradually working up to those of a more difficult character which involve greater skill. Each of these, when finished, must reach a certain standard of perfection before the learner can pass on to the next, thus insuring a

knowledge of the principles by which the work is accomplished. The wood-working department is subject to the same requirements, and here, as in iron working, the first exercises are of the simplest character, while the later ones demand increased skill on the part of the workman.

The only tools necessary for the student to purchase are a pair of calipers and a two-foot rule, also a pair of overalls, all of which may be obtained in Bryan.

DEPARTMENT OF MILITARY SCIENCE AND TACTICS.

LIEUT. JOHN S. MALLORY, 2D U. S. INFANTRY, PROFESSOR.

The instruction in this department is in conformity with the act of Congress, which, in endowing this and similar institutions, stipulates that military tactics shall be taught.

An officer of the regular army is detailed by direction of the President of the United States to carry out this requirement of the act in question, and the necessary arms, accoutrements and ammunition are furnished by the General Government without cost to the College.

The military instruction given is confined to Infantry and Artillery drills, a limited amount of target practice, and the duties of sentinels. Also, lectures on technical subjects will be occasionally delivered.

The military system is also used here as the principal means of enforcing discipline and securing regularity in the performance of academic duties. The Professor of Military Science is, under the Chairman of the Faculty, charged with the preservation of discipline, with the title and powers of Commandant.

It will be the special aim of the present Commandant in the future, as it has been in the past, to inculcate in the students that manliness of character and habit of truthfulness in all things that characterizes young men as gentlemen the world over.

Total 170

ROLL OF STUDENTS BY CLASSES.

WITH THEIR RELATIVE CLASS STANDING IN GENERAL MERIT
AND IN EACH DEPARTMENT.

Explanation. — Each Department includes the various studies belonging to it, as shown elsewhere.

Names not numbered in the column of General Merit are those of students who have failed to pass into the higher class either on account of having entered late, absence, or want of preparation.

The first three students in each class are reported to the Board of Directors as “honor men” and their names marked thus *.

Students noted as “conditioned” are required to make up a deficiency in the study named.

In determining the general merit in each class the following rule is observed: The student who has the highest mark in any department receives 100, the one who has the lowest receives 66, the others are interpolated in arithmetical progression: the numbers so obtained in each department are added together and give the mark which determines the rank of the student in general merit.

The numbers under the heads of departments in the column below are the final session marks.

FIRST-CLASS GRADUATES.

Order of General Merit.	NAMES.	Agriculture.	Mechanics.	Mathematics.	Chemistry and Physics.	English.	No. of Demerits.	REMARKS.
*1	Adriance	96		90.4	91.9	92	0	First Lieutenant.
*1	Giesecke		95.2	96.7	89.9	91	0	Captain.
*2	Tilson		88.5	93.2	88.4	83	0	Captain.
3	Wright		87.7	90.3	84.6	82	5	Quarter Master,
4	Cottingham		86.3	85.9	87.2	77	0	Adjutant.
5	Whitlock		88.6	84.4	76.4	73	0	Captain.
6	Carson, W.	85.4		77.1	79.7	79	0	First Lieutenant.
7	Burghard		87.6	75.1	72.4	82	0	First Lieutenant.
8	Carson M.	85.3		80.6	78.3	79	0	First Lieutenant.
9	Wookward		82.7	77.7	72.6	74	0	Captain.
	McCulloch		80.8	89.4		89	23	Second Lieutenant.

Cadet McCulloch entered the College at the beginning of of the session. He was well.prepared on all subjects in which he could obtain instruction elsewhere than here in the State. His class standing has been excellent, but he has not passed over the technical studies of the course with his class, and hence could not be assigned a standing with them, although by extra work he has been able to graduate.

SECOND CLASS.

Order of General Merit.	NAMES.	Chemistry and Physics.	Mathematics.	English.	Agriculture.	Mechanics.	No. of Demerits.	REMARKS.
*1	Flach, F.	83.4	89.0	85	88.1	0	0	First Sergeant.
*2	Rogers	82.2	92.6	89	84.5	0	0	Sergeant.
*3	Fordtran	82.3	87.1	91	93.3	0	18	Sergeant.
4	Flach, R.	76.1	89.1	87.5	96.5	0	0	First Sergeant.
5	Freeman	76.1	93	87	85.7	0	0	First Sergeant.
6	McNair	79.7	86.3	85	84.3	0	11	Corporal.
7	West	78.9	77	84	85.4	0	0	Sergeant.
8	Pruit	71.7	73	86	90.5	0	0	Sergeant.
9	Allen	65.2	86.5	83	83.2	0	0	Quarter Master Sergeant.
10	Knolle	70.4	74.3	79	80.3	0	0	Sergeant.
11	Roff	60.4	73.4	76	82.6	0	0	Sergeant. Cond. on Chemistry
12	Hereford	59.3	78.9	80	79.8	0	0	1st Sergeant.
13	Hare	54.4	74.3	78	74.8	0	0	Sergt.-Maj.
14	Gruene	53.7	71.6	66	76.3	0	51	Sergeant.
15	Lewellyn	57.9	63.3	67	77.4	0	4	Corporal. Deficient.
16	High	52	67	66	75.9	0	0	Corporal. Deficient.
17	Lyon	52	63	79	73.3	0	0	Corporal. Deficient.
18	Pearce	49.9	65	75	71.8	0	53	Corporal. Deficient.
19	Burns	43.7	68	68	72.7	0	22	Corporal. Deficient.
20	Johnson	43.2	56.3	78	69.7	0	0	Corporal. Deficient.

THIRD CLASS.

Order of General Merit.	NAMES.	Chemistry and Physics.	Mathematics.	English.	Agriculture.	Mechanics.	No. of Demerits.	REMARKS.
*1	Forke, A.	88.5	92.5	94	96	0	0	Corporal.
*2	Allen	75.4	97.5	96	92.7	0	0	Corporal.
*3	Tilson, P.	81.2	90.1	92.8	95.5	0	0	Corporal.
4	Forke, L.	82.7	91.1	90	95.5	0	83.8	0
5	Smith, E.	77.1	88.4	94	90.8	0	0	Corporal.
6	Dietert	75.7	92.8	86.7	87.7	0	0	0
7	Chapman	81.2	96.1	85.8	89.5	0	0	0
8	Hoffman	83.9	92	88	80.1	0	0	2
9	Braun	89.9	76.5	89	83.3	0	0	2
10	Josey	76.8	80.2	91	90.1	0	0	1

	Yarborough	68.1	58.9	79	...	69.2	66	"

The following resigned during the session :

1 First Class—Cash, McCulloch.

2 Second Class—Holland, Torbett, Pearson, Nolte, Knowles, Perry.

Third Class—Bristow, DeFreese, Boyd, Shook, Bettis, Smith W., Baker, Cerf, Keith, Bethany, Bancroft, Heyn,

Fechner, Johnson C., Howell, Mitchell, Williamson, McCulloch, Wright W., Story, Reichardt, Eichlitz, Ragsdale, LaBauve H., LaBauve J., Street, Mathews, Tillinghast, Rich, McDonald, Saunders.

Preparatory—Guyton, Kernole, Whealan.

The following were dropped from the rolls :

Masterson, Oglesby, Davis, Fletcher, Long, Putman, Strain, Chaddick.

The following were dismissed :

Bradley, McMahan, Rue, Williams H.

Died : Spinelli.

Withdrawn by request : Collins, Cannon, Giesen, Dyer.

PREPARATORY CLASS.

The following students of this class have been pronounced proficient and passed to the Third Class :

Amsler, Becker, Baumgartner, DeFreese, Hereford, Hill, Halbert, Koy, Meriwether, McLane, McCrary, Middlebrook, Manly, Peareson, Smith R., Williamson, Wangemann.

The following are deficient :

Cummins, Callis, Hellman S., Keylich, Orfila.

Distinguished in the Department of Languages :

German—Allen, L.

Spanish—Braun.

Latin—Smith, E.

ALUMNI.

From the opening of the College in 1876 to its reorganization in 1880 the studies were elective. There were many graduates during that period in one or more departments. Since at that time only those students who obtained degrees could rank with graduates under a curriculum, it has been deemed proper to omit from this list all except titled graduates and those who have completed a curriculum. Names of deceased alumni are in small capitals.

The present occupations of the alumni are given so far as known, but information as to these is not readily accessible, and errors may be found in that given here. The alumni are requested to aid the Chairman in making their roll as complete as possible, as a means of conveying to each trustworthy intelligence of all the others.

1880.

L. J. Kopke, C. E., Engineer, Merchant.
W. H. Brown, C. E., Lawyer.

1881.

G. H. Dugan, Stock-raiser.

1882.

M. F. Armstrong,	Mechanical Course,	Farmer.

APPENDIX.

This College owes its origin to

AN ACT

DONATING PUBLIC LANDS TO THE SEVERAL STATES AND TERRITORIES WHICH MAY PROVIDE COLLEGES FOR THE BENEFIT OF AGRICULTURE AND THE MECHANIC ARTS.

1. *Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled,* That there be granted to the several States, for the purposes hereinafter mentioned, an amount of public land, to be apportioned to each State, a quantity equal to thirty thousand acres for each Senator and Representative in Congress to which the States are respectively entitled by the apportionment under the census of eighteen hundred and sixty: *Provided,* That no mineral land shall be selected or purchased under the provisions of this act.

SEC. 2. *And be it further enacted,* That the land aforesaid, after being surveyed, shall be apportioned to the several States in sections or sub-division of sections not less than one quarter of a section; and whenever there are public lands in a State subject to sale at private entry at one dollar and twenty-five cents per acre, the quantity to which said States shall be entitled shall be selected from such lands within the limit to each of the States, and the Secretary of the Interior is hereby directed to issue to each of the States in which there is not the quantity of public lands subject to sale at private entry at one dollar and twenty-five cents per acre, to which said State may be entitled under the provisions of this act, land scrip to amount in acres for the the deficiency of its distributive share; said scrip to be sold by said States and the proceeds applied to the uses and purposes prescribed in this act, and for no other purpose whatsoever; *Provided,* that in no case shall any State to which land scrip may thus be issued be allowed to locate the same within the limits of any other State, or of any Territory of the United States, but their assignees may thus locate said land scrip upon any of the unappropriated lands of the United States subjected to same at private entry at one dollar and twenty-five cents or less per acre; *And provided further,* that no more than one million acres shall be located by such assignees in any of the States, *And provided further,* that no such location shall be made before one year from the passage of this act.

SEC. 3. *And be it further enacted*, That all the expenses of management, superintendence and taxes, from date of selection of said lands previous to their sales, and all expenses incurred in the management and disbursement of the money which may be received therefrom, shall be paid by the State to which they may belong, out of the treasury of said States, so that the entire proceeds of the sale of said lands shall be applied without any diminution whatever to the purposes hereinafter mentioned.

SEC. 4. *And be it further enacted*, That all moneys derived from the sale of lands aforesaid, by the States to which the lands are apportioned, and from the sale of land scrip hereinbefore provided for, shall be invested in stocks of the United States, or of the States, or some other safe stocks, yielding not less than five per centum upon the par value of said stocks; and that the moneys so invested shall constitute a perpetual fund, the capital of which shall remain forever undiminished (except so far as may be provided in section fifth of this act), and the interest of which shall be inviolably appropriated by each State which may take and claim the benefit of this act, to the endowment, support and maintenance of at least one college where the leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and mechanic arts, in such manner as the Legislature of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions in life.

SEC. 5. *And be it further enacted*, That the grant of land and land scrip hereby authorized, shall be made on the following conditions, to which, as well as to the provisions hereinbefore contained, the previous assent of the several States shall be signified by legislative acts.

First. If any portion of the fund invested, as provided by the foregoing section, or any portion of the interest thereon, shall by action or contingency, be diminished or lost, it shall be replaced by the State to which it belongs, so that the capital of the fund shall remain forever undiminished; and the annual increase shall be regularly applied without diminution to the purposes mentioned in the fourth section of this act, except that a sum not exceeding ten per centum upon the amount received by any State under the provisions of this act, may be expended for the purchase of lands for sites or experimental farms, whenever authorized by the respective Legislatures of said States.

Second. No portion of said fund, nor the interest thereon, shall be applied directly or indirectly, under any pretense

whatever, to the purchase, erection, preservation or repair of any building or buildings..

Third. Any State which may take and claim the benefit of the provisions of this act, shall provide, within five years, at least not less than one college, as described in the fourth section of this act, or the grant to such State shall cease; and said State shall be bound to pay the United States the amount received of any lands previously sold and that the title to purchasers under the State shall be valid.

Fourth. An annual report shall be made regarding the progress of each college, recording any improvements and experiments made, with their cost and results, and such other matters, including State industrial and economical statistics, as may be supposed useful, one copy of which shall be transmitted by mail free, by each, to all the other colleges which may be endowed under the provisions of this act and also one copy to the Secretary of the Interior.

Fifth. When lands shall be selected from those which have been raised to double the minimum price, in consequence of railroad grants, they shall be computed to the States at the maximum price and the number of acres proportionately diminished.

Sixth. No State while in a condition of rebellion or insurrection against the government of the United States shall be entitled to the benefit of this act.

Seventh. No State shall be entitled to the benefit of this act, unless it shall express its acceptance thereof by its Legislature within two years from the date of its approval by the President.

SEC. 6. *And be it further enacted,* That land scrip issued under the provisions of this act shall not be subject to location until after the first day of January, one thousand eight hundred and sixty-three.

SEC. 7. *And be it further enacted,* That the land officers shall receive the same fees for locating scrip issued under the provisions of this act as is now allowed for the location of military bounty land warrants under existing laws; *Provided,* their maximum compensation shall not be thereby increased.

SEC. 8. *And be it further enacted,* That the Governors of the several States to which scrip shall be issued under this act shall be required to report annually to Congress all sales made of such scrip until the whole shall be disposed of, the amount received for the same, and what appropriation has been made of the proceeds.

Approved July 2, 1862.

And to the following amendment:

AN ACT TO AMEND THE FIFTH SECTION OF AN ACT ENTITLED
"AN ACT DONATING PUBLIC LANDS TO THE SEVERAL STATES
AND TERRITORIES WHICH MAY PROVIDE COLLEGES FOR THE
BENEFIT OF AGRICULTURE AND THE MECHANIC ARTS."

Approved July two, eighteen hundred and sixty-two, so as to extend the time within which the provisions of said act shall be accepted and such Colleges established.

1. *Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled,* That the time in which the several States may comply with the provisions of the act of July two, eighteen hundred and sixty-two, entitled "An act donating public lands to the several States and Territories which may provide colleges for the benefit of agriculture and the mechanic arts," is hereby extended so that the acceptance of the benefits of the said act may be expressed within five years from the date of filing of such acceptance with the Commissioner of the Land Office; *Provided,* that when any Territory shall become a State and be admitted into the Union, such new States shall be entitled to the benefits of said act of July two, eighteen hundred and sixty-two, by expressing acceptance therein required within three years from the date of its admission into the Union, and providing the colleges within five years after such acceptance, as prescribed in this act; *Provided, further,* that any State that has heretofore expressed its acceptance of the act herein referred to, shall have the period of five years within which to provide at least one college, as described in the fourth section of this act, after the time for providing said college according to the act of July two, eighteen hundred and sixty-two, shall have expired.

Approved July 28, 1865.

By joint resolution, approved November 1, 1866, the Legislature of Texas formally accepted the provisions of the Congressional acts, and the State received from the General Government scrip for 180,000 acres of public land, the proceeds of which constitute the present permanent endowment fund of this College, and is in Texas seven per cent. gold frontier defense bonds to the amount of \$174,000.

The Legislature fulfilled its obligations by passing "An act to provide for the establishment of an Agricultural and Mechanical College of Texas," approved April 17, 1871, and by making liberal successive appropriations—aggregating \$187,000—for the buildings and equipments necessary for putting the institution in operation. And the County of Brazos secured its location within its limits by donating to the State the present College farm, a tract of 2416 acres, five miles south of the town of Bryan.

Finally, the Constitution of 1876, article VII, provided: "Section 13. The Agricultural and Mechanical College of Texas, established by the act of the Legislature, passed April 17, 1871, located in the County of Brazos, is hereby made and constituted a branch of the University of Texas, for instruction in agriculture, the mechanic arts, and the natural sciences connected therewith."

The College was formally opened for the reception of students October 4, 1876.
