

BULLETIN
OF THE
AGRICULTURAL AND MECHANICAL
COLLEGE OF TEXAS

Sixth Series, Vol. 5

December 1, 1957

No. 1

THE GRADUATE SCHOOL ISSUE

ANNOUNCEMENTS FOR THE SESSION

1958-59

COLLEGE STATION, TEXAS

Published bi-monthly by the Agricultural & Mechanical College of Texas

Entered as second class matter August 7, 1913, at the Postoffice at College Station, Texas, under the Act of August 24, 1912.

SUMMER SESSION 1958

JUNE 1958

S	M	T	W	T	F	S

8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30					

June 2, Monday

Registration for the first term, 8 a.m. to 12 noon.

June 3, Tuesday

Beginning of classes, 7 a.m.

June 5, Thursday

Last day for enrolling in the College for the first term.

June 6, Friday

Last day for making changes in registration.

July 4, Friday

A holiday.

July 11, Monday

First term final examinations.

July 14, Monday

Registration for the second term, 8 a.m. to 12 noon.

July 15, Tuesday

Beginning of classes, 7 a.m.

July 17, Thursday

Last day for enrolling in the College for the second term.

July 18, Friday

Last day for making changes in registration.

August 22, Friday

Second term final examinations.

14	15	16	17	18	19	20
21	22	23	24	25	26	27
28	29	30				

September 8, Monday

Opening day of New Student Week.

September 12, Friday

Registration of new Basic Division students who have had no college work, 8 a.m. to 5 p.m.

September 13, Saturday

Registration of all other students, 8 a.m. to 5 p.m.

September 15, Monday

Beginning of classes, 8 a.m.

September 20, Saturday

Last day for enrolling in the College for the fall semester or for adding new courses.

September 27, Saturday

Last day for dropping courses with no grade.

November 8, Saturday

Official Corps trip.

November 10, Monday

Mid-semester grade reports.

November 27-30, Thursday-Sunday, inclusive

Thanksgiving holidays.

December 20, Saturday

Beginning of Christmas recess, 12 noon.

CALENDAR

1959

January 5, 1959, Monday
End of Christmas recess, 8 a.m.

January 17, Saturday
Commencement.

January 19, Monday
First day of semester examinations.

January 24, Saturday
Last day of semester examinations.

SPRING SEMESTER 1959

January 28, Wednesday
Opening day of New Student Week.

January 30, Friday
Registration of new Basic Division students who have had no college work, 1 p.m.

January 31, Saturday
Registration of all other students, 8 a.m. to 5 p.m.

February 2, Monday
Beginning of classes, 8 a.m.

February 7, Saturday
Last day for enrolling in the College for the spring semester or for adding new courses.

February 14, Saturday
Last day for dropping courses with no grade.

February 16, Monday
Beginning of Religious Emphasis Week.

February 20, Friday
End of Religious Emphasis Week.

March 25, Wednesday
Beginning of spring recess, 5 p.m.

March 31, Tuesday
End of spring recess, 8 a.m.

April 6, Monday
Mid-semester grade reports.

May 23, Saturday
Commencement and Final Review.

May 25, Monday
First day of semester examinations.

May 30, Saturday
Last day of semester examinations.

The Texas Agricultural and Mechanical College System

Composed of all colleges, agencies and services under the supervision of the Board of Directors of the Agricultural and Mechanical College of Texas, including:

- The Agricultural and Mechanical College of Texas
- The Arlington State College
- The Tarleton State College
- The Prairie View Agricultural and Mechanical College
- The Texas Agricultural Experiment Station
- The Texas Agricultural Extension Service
- The Texas Forest Service
- The Texas Engineering Experiment Station
- The Texas Engineering Extension Service
- The Texas Transportation Institute

Board of Directors

W. T. DOHERTY	<i>President</i>
PETROLEUM ENGINEER, HOUSTON	
J. HAROLD DUNN	<i>Vice President</i>
INDUSTRIAL EXECUTIVE, AMARILLO	
A. E. CUDLIPP, <i>Industrial Executive</i>	Lufkin
R. H. FINNEY, JR., <i>Business Executive</i>	Greenville
L. H. RIDOUT, JR., <i>Business Executive</i>	Dallas
PRICE CAMPBELL, <i>Utilities Executive</i>	Abilene
H. B. ZACHRY, <i>Construction Engineer</i>	San Antonio
HERMAN F. HEEP, <i>Agriculturist and Businessman</i>	Austin
EUGENE B. DARBY, <i>Construction Engineer</i>	Pharr

Administrative Officers

M. T. HARRINGTON	<i>President</i>
E. L. ANGELL.....	<i>Vice President and Secretary of the Board</i>
D. W. WILLIAMS.....	<i>Vice President for Agriculture</i>
J. C. CALHOUN, JR.....	<i>Vice President for Engineering</i>
R. H. SHUFFLER.....	<i>Director of Information and Publications</i>
W. C. FREEMAN	<i>Comptroller</i>
T. R. SPENCE.....	<i>Manager of Physical Plants</i>

The Agricultural and Mechanical College of Texas

Administrative Officers

M. T. HARRINGTON, PH.D.....*President*

EARL RUDDER, B.S.....*Vice President*

J. BOYD PAGE, PH.D.....*Dean of the College and Graduate School*

FRED J. BENSON, M.S.....*Dean, School of Engineering*

WALTER H. DELAPLANE, PH.D.....*Dean, School of Arts and Sciences*

J. C. MILLER, PH.D.....*Dean, School of Agriculture*

ALVIN A. PRICE, D.V.M., M.S.....*Dean, School of Veterinary
Medicine*

ROBERT B. KAMM, PH.D.....*Dean, Basic Division and
Student Personnel Services*

JOE E. DAVIS, B.S., Colonel, Inf., U.S.A.R.*Commandant of the
School of Military Sciences*

CHARLES A. ROEBER, B.A., B.B.A.....*Business Manager*

H. LLOYD HEATON, M.S.....*Director of Admissions and Registrar*

The Agricultural and Mechanical College of Texas

Graduate School Organization

J. BOYD PAGE, *Dean*
IDE P. TROTTER, *Associate Dean*
ESTELLE STEVENS, *Secretary*

GRADUATE COUNCIL

J. BOYD PAGE, <i>Dean</i>	C. KINNEY HANCOCK
ROBERT R. SHRODE	FRED J. BENSON
RALEIGH E. PATTERSON	TRAVIS J. PARKER
JOHN H. MILLIFF	E. CHESTER KLIPPLE
HARRIOTT O. KUNKEL	CHARLES LAMOTTE
RALPH W. STEEN	WAYNE C. HALL
CHARLES D. HOLLAND	

COMMITTEES ON GRADUATE INSTRUCTION

School of Agriculture	School of Arts and Sciences
HARRIOTT O. KUNKEL, <i>Chairman</i>	E. CHESTER KLIPPLE, <i>Chairman</i>
WILLIE F. KRUEGER	DONALD F. WEEKES
WAYNE C. HALL	ROBERT G. REEVES
EARL H. KNEBEL	ROBERT M. STEVENSON
HENRY RAKOFF	DONALD W. HOOD
W. CARL VANDERZANT	ROBERT L. SKRABANEK
R. JAMES HILDRETH	PETER DEHLINGER

School of Engineering	School of Veterinary Medicine
TRAVIS J. PARKER, <i>Chairman</i>	JOHN H. MILLIFF, <i>Chairman</i>
J. DONALD LINDSAY	WILLIAM C. BANKS
ELMER G. SMITH	RUDOLPH E. LEIGHTON
JOHN TOM HURT	ERROL B. MIDDLETON
CLIFFORD M. SIMMANG	HILTON A. SMITH
ALFRED E. CRONK	RICHARD D. TURK
EDWARD H. ANDREW	PATTON W. BURNS
ROBERT M. HOLCOMB	

GRADUATE FACULTY

- Abbott, John Paul, Distinguished Professor of English
B.A., Vanderbilt, 1925; Ph.D., Iowa, 1939.
- *Adams, William Floyd, Associate Professor of Engineering Drawing
B.S., Agricultural and Mechanical College of Texas, 1923; M.S., 1954;
Reg. Prof. Engr.
- Adriance, Guy Webb, Professor of Horticulture and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1915; M.S., California,
1917; Ph.D., Michigan State College, 1929.
- *Alexander, Robert Benjamin, Assistant Professor of Chemistry
B.A., Baylor, 1945; M.A., 1946; Ph.D., Agricultural and Mechanical College
of Texas, 1957.
- *Amyx, James William, Associate Professor of Petroleum Engineering
B.S., Agricultural and Mechanical College of Texas, 1946; M.Eng., 1956;
Reg. Prof. Engr.
- *Anderson, John Quincey, Associate Professor of English
A.B., Oklahoma Agricultural and Mechanical College, 1939; M.A.,
Louisiana State, 1948; Ph.D., North Carolina, 1952.
- Andrew, Edward Harris, Jr., Associate Professor of Electrical Engineering
and Assistant to the Dean of Engineering
B.S., Agricultural and Mechanical College of Texas, 1947; S.M.,
Massachusetts Institute of Technology, 1950; Ph.D., Agricultural and
Mechanical College of Texas, 1954; Reg. Prof. Engr.
- Atkins, Irvin Milburn, Professor of Agronomy (Agricultural Research Service,
USDA, cooperating)
B.S., Kansas State College, 1928; M.S., 1936; Ph.D., Minnesota, 1945.
- Bader, Richard George, Associate Professor of Oceanography
B.S., Maine, 1948; S.B., Chicago, 1949; M.S., 1950; Ph.D., 1952.
- Baldauf, Richard John, Assistant Professor of Wildlife Management
B.S., Albright College, 1949; M.S., Agricultural and Mechanical College
of Texas, 1951; Ph.D., 1956.
- *Ballinger, Richard Henry, Professor of English
B.A., Texas, 1936; M.A., 1938; Ph.D., Harvard, 1953.
- Banks, William Carl, Professor of Veterinary Medicine and Surgery
D.V.M., Agricultural and Mechanical College of Texas, 1941; M.S., 1952.
- Bashaw, Elexis C., Assistant Professor of Agronomy (Agricultural Research
Service, USDA, cooperating)
B.S., Purdue, 1947; M.S., 1948; Ph.D., Agricultural and Mechanical College
of Texas, 1954.
- *Bass, Daniel Materson, Assistant Professor of Petroleum Engineering
B.S., Louisiana State, 1950; M.S., Agricultural and Mechanical College
of Texas, 1955; Reg. Prof. Engr.
- Bass, James Horace, Professor of History
B.A., North Texas State Teachers College, 1924; M.A., Texas, 1931;
Ph.D. 1933.
- Basye, Robert Eugene, Professor of Mathematics
B.A., Missouri, 1929; M.A., Princeton, 1931; Ph.D., Texas, 1933.

*Associate Member

- Baty, James Bernard, Professor of Civil Engineering
B.S., Agricultural and Mechanical College of Texas, 1925; M.C.E., Cornell, 1950; Reg. Prof. Engr.
- Beachell, Henry M., Agronomist of Texas Agricultural Experiment Station, Beaumont (Agricultural Research Service, USDA, cooperating)
B.S., Nebraska, 1930; M.S., Kansas State College, 1933.
- *Bearden, Harold D., Director of Texas Engineering Extension Service
B.S., Texas Technological College, 1931; M.A., Texas, 1936.
- Behrens, Richard, Plant Physiologist of Plant Physiology and Pathology Department (Agricultural Research Service, USDA, cooperating)
B.S., University of Wisconsin, 1949; M.S., 1950; Ph.D., 1952.
- *Bennett, Alvin Lowell, Associate Professor of English
B.A., Texas, 1927; M.A., Washington, 1931; Ph.D., Texas, 1952.
- Benson, Fred Jacob, Dean of the School of Engineering; Executive Officer of Texas Transportation Institute; and Professor of Civil Engineering
B.S., Kansas State College, 1935; M.S., Agricultural and Mechanical College of Texas, 1936; Reg. Prof. Engr.
- *Bernard, Cicero Henry, Associate Professor of Physics
A.B., Phillips, 1928; M.S., Kentucky, 1931.
- Berry, Raymond Orvil, Professor of Animal Husbandry
B.S., North Texas State Teachers College, 1928; M.S., Agricultural and Mechanical College of Texas, 1932; Ph.D., Johns Hopkins, 1939.
- *Bird, Luther S., Assistant Professor of Plant Physiology and Pathology
B.S., Clemson College, 1948; M.S., Agricultural and Mechanical College of Texas, 1953; Ph.D., 1955.
- Blackhurst, Homer T., Professor of Horticulture
A.B., Glenville State Teachers College, 1935; M.S., Agricultural and Mechanical College of Texas, 1940; Ph.D., 1947.
- Blank, Horace R., Professor of Geology.
B.S., Pennsylvania, 1919; Ph.D., 1924.
- *Bloodworth, Morris Elkins, Associate Professor of Agronomy
B.S., Agricultural and Mechanical College of Texas, 1941; M.S., 1953.
- Bonnen, Clarence Alfred, Professor of Agricultural Economics.
B.S., Illinois, 1920; M.S., 1924.
- *Boone, James Leroy, Jr., Assistant Professor of Industrial Education
B.S., Agricultural and Mechanical College of Texas, 1947; M.Ed., 1948.
- Bossler, Robert Burns, Professor of Petroleum Engineering
B.S., University of Pittsburgh, 1918.
- Boughton, Ivan Bertrand, Professor of Veterinary Pathology
D.V.M., Ohio State, 1916.
- *Branson, Robert Earl, Associate Professor of Agricultural Economics and Sociology
B.S., Southern Methodist, 1941; M.P.A., Harvard, 1948; M.A., 1949; Ph.D., 1954.
- Brewer, Burns W., Professor of Mathematics
A.B., University of Missouri, 1935; A.M., 1936; Ph.D., 1938.
- Bridges, Charles Hubert, Associate Professor of Veterinary Pathology
D.V.M., Agricultural and Mechanical College of Texas, 1945; M.S., 1954; Ph.D., 1957.

- Brison, Fred Robert, Professor of Horticulture
B.S., Agricultural and Mechanical College of Texas, 1921; M.S., Michigan State College, 1931.
- *Brown, Claude L., Lecturer, Department of Genetics
B.S.F., Georgia, 1948; M.S., 1954; Ph.D., Harvard, 1957.
- *Brown, Murray Allison, Assistant Professor of Dairy Science
B.S., Michigan State College, 1950; M.S., Agricultural and Mechanical College of Texas, 1953; Ph.D., 1956.
- Brown, Meta Suche, Professor of Agronomy
B.A., Texas, 1931; M.A., 1933; Ph.D., 1935.
- Brown, Sidney Overton, Professor of Biology
B.A., Texas, 1932; Ph.D., 1936.
- Buchanan, Spencer Jennings, Professor of Civil Engineering
B.S., Agricultural and Mechanical College of Texas, 1926; M.S., Massachusetts Institute of Technology, 1931; C.E., Agricultural and Mechanical College of Texas, 1948; Reg. Prof. Engr.
- Burgess, Archie Rostron, Professor of Industrial Engineering and Head of Department
B.S., Washington, 1932; M.S., 1938; Reg. Prof. Engr.
- *Burns, Edward Eugene, Assistant Professor of Horticulture
B.S., Purdue, 1950; M.S., 1952; Ph.D., 1956.
- Burns, Patton Wright, Professor of Veterinary Physiology and Pharmacology and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1923; D.V.M., 1926.
- *Burroughs, Albert Lawrence, Serologist of Department of Veterinary Microbiology
B.S., Wyoming, 1938; M.S., Montana State College, 1941; Ph.D., Calif., 1946.
- Butler, Ogbourne Duke, Jr., Professor of Animal Husbandry and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1939; M.S., 1947; Ph.D., Michigan State College, 1953.
- Calaway, Paul Kenneth, Professor of Chemistry and Head of Department
B.A., Arkansas College, 1931; M.S., Georgia Institute of Technology, 1933; Ph.D., Texas, 1938.
- Caldwell, Augustus George, Associate Professor of Agronomy
B.S.A., Toronto, 1946; M.A.A., 1948; Ph.D., Iowa State College, 1955.
- Calhoun, John C., Jr., Vice President for Engineering and Professor of Petroleum Engineering
B.S., Pennsylvania State College, 1937; M.S., 1941; Ph.D., 1946.
- *Camp, Bennie Joe, Assistant Professor of Biochemistry and Nutrition
B.S., East Texas State Teachers College, 1949; M.S., Agricultural and Mechanical College of Texas, 1953; Ph.D., 1956.
- *Carroll, Gerald Vincent, Associate Professor of Geology
B.A., Lehigh, 1943; Ph.D., Yale, 1952.
- *Cartwright, Thomas Campbell, Associate Animal Husbandman and Geneticist of Texas Agricultural Experiment Station, McGregor (Agricultural Research Service, USDA, cooperating)
B.S., Clemson College, 1948; M.S., Agricultural and Mechanical College of Texas, 1949; Ph.D., 1954.

*Associate Member

- Chalk, Alfred Franklin, Professor of Economics and Head of Department
B.A., Baylor, 1934; M.S., Agricultural and Mechanical College of Texas,
1936; Ph.D., Texas, 1950.
- *Cook, Elton D., Agronomist of Texas Agricultural Experiment Substation,
Temple
B.S., Texas Technological College, 1935; M.S., Kansas State, 1948;
Ph.D., Nebraska, 1951.
- Coon, Jesse Bryan, Professor of Physics
A.B., Indiana, 1932; M.A., 1935; Ph.D., Chicago, 1949.
- Cooper, William C., Plant Physiologist of Texas Agricultural Experiment
Station, Weslaco (Agricultural Research Service, USDA, cooperating)
B.S., Maryland, 1929; M.S., California Institute of Technology, 1936;
Ph.D., 1938.
- Couch, James Russell, Professor of Biochemistry and Nutrition and of Poultry
Science
B.S., Agricultural and Mechanical College of Texas, 1931; M.S., 1934;
Ph.D., Wisconsin, 1948.
- *CoVan, Jack Phillip, Professor of Industrial Engineering
B.M.E., Ohio State, 1935; B.I.E., 1935; M.S., Illinois, 1942; Reg. Prof.
Engr.
- Cover, Sylvia A., Professor, Home Economics Department, Texas Agricultural
Experiment Station
B.S., Illinois, 1920; M.A., Missouri, 1929; Ph.D., 1933.
- Crawford, Charles William, Associate Dean of Engineering and Professor of
Mechanical Engineering
B.S., Agricultural and Mechanical College of Texas, 1919; M.S., 1929;
Reg. Prof. Engr.
- Crawford, Paul B., Assistant Director of Texas Petroleum Research Committee
B.S., Texas Technological College, 1943; M.S., Texas 1946; Ph.D., 1949.
- Cronk, Alfred Edward, Professor of Aeronautical Engineering and Head of
Department
B.S., College of St. Thomas, 1937; M.S., Minnesota, 1946.
- *Dahlberg, Frank Iver, Professor of Animal Husbandry
B.S., Agricultural and Mechanical College of Texas, 1925; M.S., Wis-
consin, 1930.
- Darrow, Robert Arthur, Professor of Range and Forestry
B.S., New York State College of Forestry, 1932; M.S., Arizona, 1935;
Ph.D., Chicago, 1937.
- Davids, Lewis Edmund, Professor of Business Administration
B.S., New York, 1941; M.B.A., 1942; Ph.D., 1949.
- *Davis, Daniel Rowland, Associate Professor of Rural Sociology
B.S., Agricultural and Mechanical College of Texas, 1932; M.S., 1935.
- *Davis, Donald Edgar, Assistant Professor of Veterinary Microbiology
D.V.M., Ohio State, 1952; M.S., 1953.
- Davis, William B., Professor of Wildlife Management and Head of Department
B.A., Chico State Teachers College, 1933; M.A., California, 1936;
Ph.D., 1937.

- Dehlinger, Peter, Professor of Geophysics
B.S., Michigan, 1940; M.S., California Institute of Technology, 1943;
Ph.D., 1950.
- *Deland, Raymond John, Assistant Professor of Meteorology
B.S., Adelaide (Australia), 1943.
- Delaplane, Walter Harold, Dean of the School of Arts and Sciences and
Professor of Economics
A.B., Oberlin College, 1929; A.M., 1931; Ph.D., Duke, 1934.
- DeWerth, Adolphe Ferdinand, Professor of Floriculture and Landscape
Architecture and Head of Department
B.S., Ohio State, 1930; M.S., 1931.
- Dillingham, Harley Clay, Professor of Electrical Engineering
B.S., Agricultural and Mechanical College of Texas, 1922; A.M., Columbia,
1930; Reg. Prof. Engr.
- *Dillon, Lawrence Samuel, Associate Professor of Biology
B.S., Pittsburgh, 1933; M.S., Agricultural and Mechanical College of
Texas, 1950; Ph.D., 1954.
- Dixon, Keith Lee, Associate Professor of Wildlife Management
A.B., San Diego State College, 1943; M.S., California, 1948; Ph.D., 1953.
- Doak, Clifton Childress, Professor of Biology and Head of Department
B.S., North Texas State Teachers College, 1922; M.S., Agricultural and
Mechanical College of Texas, 1928; Ph.D., Illinois, 1933.
- *Dobson, William Jackson, Professor of Biology
B.A., Austin College, 1939; Ph.D., Texas, 1946.
- *Dowell, William Merl, Professor of Health and Physical Education
B.S., Sam Houston State Teachers College, 1929; M.A., George Peabody
College, 1932.
- *Edmondson, Vance Ward, Assistant Professor of Agricultural Economics
B.S.A., Arkansas, 1948; M.S., Oklahoma Agricultural and Mechanical
College, 1950; Ph.D., Cornell, 1956.
- Eisner, Melvin, Professor of Physics
B.A., Brooklyn College, 1942; M.S., North Carolina, 1947; Ph.D., 1948.
- *Ekfelt, Fred Emil, Professor of English
B.A., Iowa, 1931; M.A., 1932; Ph.D., 1941.
- *Elkins, Rollin Lafayette, Associate Professor of Business Administration
B.S., Agricultural and Mechanical College of Texas, 1933; M.S., 1935.
- *Ellis, Elmer Carlos, Assistant Professor of Education and Psychology
B.S., Agricultural and Mechanical College of Texas, 1941; M.S., Texas,
1948; Ph.D., 1957.
- *Elmquist, Karl Erik, Associate Professor of English
A.B., Southern Methodist, 1932; M.A., Texas, 1939.
- *Endrizzi, John E., Assistant Professor of Agronomy
B.S., Agricultural and Mechanical College of Texas, 1949; M.S., 1951;
Ph.D., Maryland, 1955.
- Ergle, David R., Senior Plant Physiologist of Plant Physiology and Pathology
Department (Agricultural Research Service, USDA, cooperating)
B.S., Clemson College, 1926; M.S. North Carolina, 1928; Ph.D., 1930.

- Ewens, William Price, Professor of Education and Psychology
B.S., Missouri, 1936; M.E., 1946; Ed.D., Stanford, 1949.
- *Ferguson, Marvin H., Southwestern Director and National Research Co-ordinator of U.S. Golf Association, Green Section (Department of Agronomy cooperating)
B.S., Agricultural and Mechanical College of Texas, 1940; Ph.D., Maryland, 1950.
- Ferguson, Thomas Morgan, Associate Professor of Poultry Science
B.A., Southwestern, 1936; M.S., Agricultural and Mechanical College of Texas, 1946; Ph.D., 1954.
- *Fitch, David Robnett, Professor of Business Administration
B.A., Agricultural and Mechanical College of Texas, 1942; M.S., Wisconsin, 1948; Ph.D., Oklahoma, 1956.
- Folweiler, A. D., Director of Texas Forest Service
B.S., Pennsylvania State College, 1925; M.F., Yale, 1931; Ph.D., Wisconsin, 1943.
- *Franceschini, Guy Arthur, Acting Assistant Professor of Meteorology.
B.S., Massachusetts, 1950; M.S., Chicago, 1952.
- Fudge, Joseph Franklin, Professor of Agronomy and State Chemist
B.S., Illinois, 1924; M.S., Wisconsin, 1925; Ph.D., 1928.
- *Futrell, Maurice C., Plant Pathologist of Department of Plant Physiology and Pathology (Agricultural Research Service, USDA, cooperating)
B.S., Western Kentucky State College, 1947; M.S., Wisconsin, 1949; Ph.D., 1952.
- *Gaafar, Sayed Mohamed H., Assistant Professor of Veterinary Parasitology
B.C.Sc., College of Veterinary Medicine (Cairo, Egypt), 1944; M.S., Kansas State College, 1949; Ph.D., 1950; D.V.M., Agricultural and Mechanical College of Texas, 1955.
- Gabbard, Letcher P., Professor of Agricultural Economics
B.S.A., Tennessee, 1915; M.S., Wisconsin, 1921.
- Gaines, J. C., Professor of Entomology and Head of Department
B.S., Alabama Polytechnic Institute, 1925; M.S., 1926; Ph.D., Iowa State College, 1937.
- Galloway, Bob Mitchel, Associate Professor of Civil Engineering and Research Assistant
B.S., Agricultural and Mechanical College of Texas, 1943; M.S., 1946; M.Eng., 1956; Reg. Prof. Engr.
- *Gibbons, Eldred Harris, Associate Professor of Microbiology
B.S.A., Tennessee, 1925; S.M., Chicago, 1929.
- *Gibbs, Leon Wilford, Assistant Professor of Veterinary Anatomy
B.S., Agricultural and Mechanical College of Texas, 1939; D.V.M., 1949; M.S., 1957.
- Godbey, Chauncey Barger, Professor of Genetics and Head of Department
B.S., Kentucky, 1925; M.S., Agricultural and Mechanical College of Texas, 1926.
- *Godfrey Curtis L., Associate Professor of Agronomy
B.S., Agricultural and Mechanical College of Texas, 1939; M.S., 1948; Ph.D., Iowa State College, 1951.

- *Goode, Phillip Barron, Professor of Business Administration
B.S., Southern Methodist, 1933; LL.B., 1936; LL.M., Texas, 1953.
- Gould, Frank Walton, Associate Professor of Range and Forestry and Curator of College Museum
B.S., Northern Illinois State College, 1935; M.S., Wisconsin, 1937; Ph.D., California, 1941.
- *Gravett, Howard L., Professor of Biology
A.B., James Millikin, 1933; M.A., Illinois, 1934; Ph.D., 1939.
- *Gray, Jarrell D., Assistant Professor of Agricultural Education
B.S., Arkansas, 1947; M.S., 1950; D.Ed., 1955.
- *Greer, Clayton Alvis, Associate Professor of English.
B.A., Texas, 1921; M.A., 1927; Ph.D., 1937.
- Grimes, Mary Anna, Professor, Home Economics Department, Texas Agricultural Experiment Station.
B.S., Kansas State College, 1920; M.S., 1927.
- Groneman, Chris Harold, Professor of Industrial Education and Head of Department
B.S., Kansas State Teachers College, 1931; M.S., 1935; D.Ed., Pennsylvania State College, 1950.
- Grumbles, Leland Creed, Professor of Veterinary Microbiology and Head of Department
D.V.M., Agricultural and Mechanical College of Texas, 1945; M.S., 1957.
- Hale, Fred, Professor of Animal Husbandry in Charge of Swine Investigations
B.S., Agricultural and Mechanical College of Texas, 1922; M.S., 1925.
- *Hall, Dan, Associate Professor of Mathematics
A.B., North Carolina, 1927; A.M., 1928.
- Hall, Wayne C., Professor of Plant Physiology and Pathology
B.S., Iowa, 1941; M.S., 1946; Ph.D., 1948.
- Hallmark, Glen Duncan, Professor of Electrical Engineering and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1935; M.S., 1946; Ph.D., 1953.
- *Ham, Joe Strother, Assistant Professor of Physics
Ph.B., Chicago, 1948; M.S., 1951; Ph.D., 1954.
- Hamilton, Thomas Rowan, Professor of Business Administration
A.B., Washington and Lee, 1917; M.S., Columbia, 1924; Ph.D., 1938.
- Hamner, Bennet Barron, Professor of Aeronautical Engineering
B.S., Agricultural and Mechanical College of Texas, 1938; M.S., 1953; Reg. Prof. Engr.
- Hampton, Herbert Elwood, Professor of Agronomy
B.S., Agricultural and Mechanical College of Texas, 1937; Ph.D., Missouri, 1943.
- Hancock, Charles Kinney, Professor of Chemistry
B.S., Southwest Texas State Teachers College, 1931; M.A., Texas, 1936; Ph.D., 1939.
- Hanna, Ralph Lynn, Associate Professor of Entomology
B.A., Stephen F. Austin State Teachers College, 1939; Ph.D., Agricultural and Mechanical College of Texas, 1951.

- Hardeman, Lyman Bryce, Associate Professor of Industrial Education
B.S., Kansas State Teachers College, 1939; M.Ed., Agricultural and Mechanical College of Texas, 1949.
- *Harrington, Edwin Lincoln, Professor of Civil Engineering
B.S., Wyoming, 1927; C.E., 1937; M.S., Agricultural and Mechanical College of Texas, 1943; Ph.D., 1952; Reg. Prof. Engr.
- Harrington, Marion Thomas, President of the College
B.S., Agricultural and Mechanical College of Texas, 1922; M.S., 1927; Ph.D., Iowa State College, 1941.
- Harris, William Donald, Professor of Chemical Engineering
B.S., Iowa State College, 1929; M.S., 1931; Ph.D., 1934; Reg. Prof. Engr.
- Harrison, Arthur L., Plant Pathologist of Texas Agricultural Experiment Station, Yoakum
B.S., Ontario Agricultural College, 1929; Ph.D., Cornell, 1935.
- *Hauer, Louis Frederick, Assistant Professor of English
B.A., Dubuque, 1931; M.A., Iowa, 1933.
- Haupt, Lewis McDowell, Jr., Professor of Electrical Engineering and Research Engineer of Texas Engineering Experiment Station.
B.S., Agricultural and Mechanical College of Texas, 1927; M.S., 1935; Reg. Prof. Engr.
- Hawkins, Leslie Virgle, Associate Professor of Industrial Education
B.S., Panhandle Agricultural and Mechanical College, 1938; M.S., Oklahoma Agricultural and Mechanical College, 1946; D.Ed., Pennsylvania State, 1953.
- Hays, John Que, Professor of English
A.B., Missouri, 1929; M.A., 1932; Ph.D., California, 1942.
- *Hedgcock, Ernest Duval, Professor of English
B.A., Tennessee, 1917; M.A., Texas, 1936.
- Hildreth, Roland James, Associate Professor of Agricultural Economics and Sociology
B.S., Iowa State College, 1949; M.S., 1950; Ph.D., 1954.
- Hill, John Hugh, Professor of History
A.B., Austin College, 1925; M.A., 1926; M.A., California, 1939; Ph.D., Texas, 1946.
- Hobgood, Price, Professor of Agricultural Engineering
B.S., Agricultural and Mechanical College of Texas, 1938; M.S., 1940; Reg. Prof. Engr.
- Holcomb, Robert Marion, Professor of Civil Engineering
B.S., Arizona, 1936; M.S., Iowa State College, 1941; Ph.D., 1956; Reg. Prof. Engr.
- *Holdredge, Edwin Sereno, Professor of Mechanical Engineering
B.S., Tennessee, 1938; M.S., 1939; Reg. Prof. Engr.
- Holland, Charles Donald, Associate Professor of Chemical Engineering
B.S., North Carolina State College, 1943; M.S., Agricultural and Mechanical College of Texas, 1949; Ph.D., 1953.
- Holleman, Theo Rufus, Professor of Architecture and Acting Head of Division
B.Arch; Agricultural and Mechanical College of Texas, 1940; M.Arch, 1951; Reg. Prof. Arch.
- Holt, Ethan Cleddy, Professor of Agronomy
B.S., Alabama Polytechnic Institute, 1943; M.S., Purdue, 1948; Ph.D., 1950.

*Associate Member

- *Holt, Oris Milton, Associate Professor of Agricultural Education.
B.S., Agricultural and Mechanical College of Texas, 1942; M.Ed., 1946.
- Hood, Donald Wilbur, Associate Professor of Oceanography
B.S., Pennsylvania State College, 1940; M.S., Oklahoma Agricultural and Mechanical College, 1942; Ph.D., Agricultural and Mechanical College of Texas, 1950.
- Hopkins, Sewell Hepburn, Professor of Biology
B.S., William and Mary College, 1927; M.A., Illinois, 1930; Ph.D., 1933.
- *Hoyle, Samuel Cooke, Jr., Professor of Business Administration
LL.B., Texas, 1926; B.A., 1946; M.A., 1948.
- Hughes, Martin Collins, Professor of Electrical Engineering
B.S., Illinois, 1917; E.E., 1926; Reg. Prof. Engr.
- Hunt, Robert Lee, Professor of Agricultural Economics
B.S., Agricultural and Mechanical College of Texas, 1924; M.S., North Carolina State College, 1927; Ph.D., Wisconsin, 1934.
- Hurt, John Tom, Professor of Mathematics
B.A., Rice Institute, 1931; M.A., 1932; Ph.D., 1935.
- Hutchison, John E., Director of Texas Agricultural Extension Service
B.S., Agricultural and Mechanical College of Texas, 1936; M.S., 1949; M.S., 1950.
- Isbell, Arthur Furman, Associate Professor of Chemistry
B.A., Baylor, 1937; M.S., Texas, 1941; Ph.D., 1943.
- Jache, Albert William, Assistant Professor of Chemistry
B.S., New Hampshire, 1948; M.S., 1950; Ph.D., Washington, 1952.
- *Jackson, John Raleigh, Associate Professor of Agricultural Education
B.S., Agricultural and Mechanical College of Texas, 1938; M.Ed., 1948.
- Jaggi, Frederick Putnam, Jr., Professor of Veterinary Public Health and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1924; D.V.M., 1926.
- Jensen, Frederick William, Distinguished Professor of Chemistry
B.S., Nebraska, 1920; M.S., 1923; Ph.D., 1925.
- Joham, Howard Ernest, Associate Professor of Plant Physiology and Pathology
B.A., Santa Barbara College, 1941; M.S., Agricultural and Mechanical College of Texas, 1943; Ph.D., Iowa State College, 1950.
- Jones, Fred Rufus, Professor of Agricultural Engineering and Head of Department
B.S., Wisconsin, 1915; M.S., Iowa State College, 1931; Reg. Prof. Engr.
- *Kahan, Archie M., Executive Director of Texas Agricultural and Mechanical Research Foundation
B.A., Denver, 1936; M.A., 1940; M.S., California Institute of Technology, 1942.
- Kamm, Robert B., Dean of the Basic Division and of Student Personnel Services
B.A., Iowa State Teachers College, 1940; M.A., Minnesota, 1946; Ph.D., 1948.
- Keese, Charles Jack, Associate Professor of Civil Engineering
B.S., Agricultural and Mechanical College of Texas, 1941; M.S., 1952.

- Kennedy, Harvey Thomas, Distinguished Professor of Petroleum Engineering
B.S., Cornell, 1921; Ph.D., Johns Hopkins, 1928; Reg. Prof. Engr.
- *Kincannon, John Alvin, Assistant Professor of Agricultural Economics and Rural Sociology
B.S., Agricultural and Mechanical College of Texas, 1939; M.S., 1949; Ph.D., 1952.
- King, Donald Roy, Assistant Professor of Entomology
B.S., Baldwin-Wallace College, 1949; M.S., Ohio State, 1951; Ph.D., 1952.
- Kinman, Murray Luther, Agronomist of Department of Agronomy (Agricultural Research Service, USDA, cooperating)
B.S., Kansas State College, 1942; M.S., Iowa State College, 1944; Ph.D., 1950.
- Klippel, Edmund Chester, Professor of Mathematics and Head of Department
B.A., Texas, 1926; Ph.D., 1932.
- *Knebel, Earl H., Assistant Professor of Agricultural Education
B.S., Montana State College, 1946; M.Ed., Agricultural and Mechanical College of Texas, 1951; D.Ed., Oklahoma Agricultural and Mechanical College, 1955.
- Koenig, Karl Joseph, Associate Professor of Geology
B.S., Illinois, 1941; M.S., 1946; Ph.D., 1949.
- *Konecny, Frank Jack, Executive Assistant, Engineering Extension Service
B.S., Agricultural and Mechanical College of Texas, 1927; M.Ed., 1940.
- Krueger, Willie F., Associate Professor of Poultry Science
B.S., Agricultural and Mechanical College of Texas, 1943; M.S., 1949; Ph.D., Missouri, 1952.
- Kunkel, Harriott Orren, Professor of Animal Husbandry and of Biochemistry and Nutrition
B.S., Agricultural and Mechanical College of Texas, 1943; M.S., 1948; Ph.D., Cornell, 1950.
- Kunze, George William, Associate Professor of Agronomy
B.S., Agricultural and Mechanical College of Texas, 1948; M.S., 1950; Ph.D., Pennsylvania State College, 1952.
- *Kunze, Otto R., Associate Professor of Agricultural Engineering
B.S., Agricultural and Mechanical College of Texas, 1950; M.S., Iowa State College, 1951.
- LaMotte, Charles, Professor of Biology
B.A., Texas, 1929; M.A., 1929; Ph.D., Illinois, 1937.
- *Landiss, Carl Wilson, Professor of Health and Physical Education
B.S., Abilene Christian College, 1935; M.Ed., Agricultural and Mechanical College of Texas, 1947; D.Ed., Pennsylvania State College, 1951.
- *Laverty, Carroll D., Professor of English
A.B., Colorado, 1933; A.M., 1934; Ph.D., Duke, 1951.
- *Leighton, Rudolph Elmo, Professor of Dairy Science
B.S., Oklahoma Agricultural and Mechanical College, 1932; M.S., 1943; Ph.D., Agricultural and Mechanical College of Texas, 1956.
- Leipper, Dale F., Professor of Oceanography and Meteorology and Head of Department
B.S., Wittenberg College, 1937; M.A., Ohio State, 1939; Ph.D., California, 1950.

- Leland, Thomas William, Professor of Business Administration and Head of Division
B.A., Wisconsin, 1921; M.S., 1922; C.P.A., 1928.
- *Lenert, August Albert, Professor of Veterinary Medicine and Surgery
B.S., Agricultural and Mechanical College of Texas, 1914; D.V.M., Kansas City Veterinary College, 1917.
- *Letbetter, Thomas Doyle, Associate Professor of Business Administration
B.B.A., Texas, 1933; M.S., Agricultural and Mechanical College of Texas, 1947; C.P.A., 1949.
- *Leutzinger, Rudolph Leslie, Associate Professor of Aeronautical Engineering
B.S., Iowa State College, 1943; M.S., Michigan, 1951.
- Lewis, Charles Franklin, Professor of Agronomy (Agricultural Research Service, USDA, cooperating)
B.S., Agricultural and Mechanical College of Texas, 1939; M.S., 1941.
- Lewis, Robert Donald, Director of Texas Agricultural Experiment Station
B.S., Pennsylvania State College, 1919; Ph.D., Cornell, 1926.
- *Liebhafsky, Erwin Eugene, Associate Professor of Economics
B.S., Agricultural and Mechanical College of Texas, 1947; M.S., 1948; Ph.D., University of Illinois, 1950.
- Ligda, Myron George Herbert, Associate Professor of Meteorology
A.B., California, 1942; S.M., Massachusetts Institute of Technology, 1948; Sc.D., 1953.
- Lindsay, James Donald, Professor of Chemical Engineering and Head of Department
B.S., Michigan, 1924; M.S., 1925; Ph.D., 1934; Reg. Prof. Engr.
- Little, Van Allen, Professor of Entomology
B.A., Sam Houston State Teachers College, 1922; M.S., Agricultural and Mechanical College of Texas, 1925; Ph.D., 1943.
- Liverman, James Leslie, Associate Professor of Biochemistry and Nutrition
B.S., Agricultural and Mechanical College of Texas, 1949; Ph.D., California Institute of Technology, 1952.
- *Luther, Herbert Adesla, Professor of Mathematics
B.A., Pittsburgh, 1934; M.S., Iowa, 1935; Ph.D., 1937.
- Lyerly, Paul J., Agronomist of Texas Agricultural Experiment Station, Ysleta
B.S., North Carolina State College, 1938; M.S., Iowa State College, 1940; Ph.D., 1942.
- Lyman, Carl Morris, Professor of Biochemistry and Nutrition and Head of Department
B.S., Oregon, 1931; A.M., Oregon State College, 1933; Ph.D., Pittsburgh, 1937.
- Lynch, Shirley Alfred, Professor of Geology and Head of Department of Geology and Geophysics
B.S., Missouri, 1928; M.S., 1931; E.M., 1935; Reg. Prof. Engr.
- *McAfee, Thomas Edison, Professor of Agronomy
B.S., Oklahoma Agricultural and Mechanical College, 1939; M.S., 1940; Ph.D., Agricultural and Mechanical College of Texas, 1953.
- *McCoy, William H., Assistant Professor of Chemistry
B.S., Youngstown, 1950; Ph.D., Pittsburgh, 1955.

- *McCulley, William Straight, Associate Professor of Mathematics
B.A., Iowa State, 1933; M.S., Agricultural and Mechanical College of Texas, 1936; Ph.D., Texas, 1956.
- *McCully, Wayne Gunther, Assistant Professor of Range and Forestry
B.S., Colorado State College, 1947; M.S., Agricultural and Mechanical College of Texas, 1950.
- McGuire, John Gilbert, Professor of Engineering Drawing and Assistant to the Dean of Engineering
B.S., Agricultural and Mechanical College of Texas, 1932; M.S., 1937; B.S., 1944; Reg. Prof. Engr.
- McNeely, John Gordon, Professor of Agricultural Economics
B.S., South Dakota State College, 1933; M.S., 1934; Ph.D., Wisconsin, 1941.
- Mackin, John Gilman, Professor of Oceanography
B.S., East Central State College, Oklahoma, 1924; M.S., Illinois, 1927; Ph.D., 1933.
- Magee, Aden Combs, Professor of Agricultural Economics
B.S., Kansas State College, 1924; M.S., Agricultural and Mechanical College of Texas, 1926.
- *Manning, Walter Scott, Associate Professor of Business Administration
B.B.A., Texas College of Arts and Industries, 1932; M.B.A., Texas, 1940; C.P.A., 1952.
- *Medlen, Ammon Brown, Associate Professor of Biology
A.B., Baylor, 1930; A.M., 1932; Ph.D., Agricultural and Mechanical College of Texas, 1952.
- *Meyers, Edward Arthur, Assistant Professor of Chemistry
B.S., Michigan, 1950; Ph.D., Minnesota, 1955.
- Middleton, Errol Bathurst, Professor of Chemistry
B.A., Illinois, 1919; M.S., 1921, Ph.D., 1938.
- Miller, James Carlton, Dean of the School of Agriculture and Professor of Animal Husbandry
B.S., Missouri, 1928; M.S., 1929; Ph.D., 1937.
- Milliff, John Henry, Professor of Veterinary Anatomy and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1931; M.S., 1934; D.V.M., 1936.
- *Mills, Jim Frank, Assistant Professor of Agronomy
B.S., Agricultural and Mechanical College of Texas, 1943; M.S., 1953.
- *Mohr, Hubert Charles, Associate Professor of Horticulture
B.S., Ohio State, 1938; M.S., 1939; Ph.D., Agricultural and Mechanical College of Texas, 1955.
- Moore, Albert Vernon, Professor of Dairy Science
B.S., Purdue, 1927; M.S., 1933; Ph.D., Michigan State College, 1948.
- Moore, Bill C., Associate Professor of Mathematics
A.B., Kansas, 1929; A.M., 1931; A.M., Princeton, 1937.
- *Moore, Clarence A., Assistant Professor of Agricultural Economics
B.S., West Texas State College, 1945; M.S., Illinois, 1946.
- Morgan, Stewart Samuel, Professor of English and Head of Department
B.A., Cincinnati, 1926; M.A., Ohio State, 1927; Ph.D., 1933.

- *Morgner, Aurelius, Professor of Economics
B.S., Missouri, 1938; M.A., 1940; Ph.D., Minnesota, 1955.
- *Morrow, Judd, Assistant Professor of Range and Forestry
B.S., Texas Technological College, 1947; M.S., 1948.
- Mountney, George J., Assistant Professor of Poultry Science
B.S., Maryland, 1948; M.S., Pennsylvania State, 1949; Ph.D., Agricultural and Mechanical College of Texas, 1957.
- Mukerji, Ambuj, Acting Associate Professor of Physics
B.S., Calcutta, 1940; M.S., 1942; Dr.Sc.Nat., ETH, Zurich, 1952.
- Nance, Joseph Milton, Associate Professor of History
B.A., Texas, 1935; M.A., 1936; Ph.D., 1941.
- *Navarro, Silvio O., Assistant Professor of Electrical Engineering and Assistant Research Engineer
B.S., Houston, 1951; M.S., Agricultural and Mechanical College of Texas, 1953; Ph.D., 1954.
- Nedderman, Wendell Herman, Professor of Civil Engineering
B.S., Iowa State College, 1943; M.Eng., Agricultural and Mechanical College of Texas, 1949; Ph.D., Iowa State College, 1951; Reg. Prof. Engr.
- Nelson, Al B., Professor of History
B.A., Texas Christian, 1932; M.A., 1933; Ph.D., California, 1937.
- Nelson, Bardin Hubert, Professor of Rural Sociology
B.S., Louisiana State, 1942; M.A., 1943; Ph.D., 1950.
- *Norton, Don Carlos, Associate Professor of Plant Physiology and Pathology
B.S., Toledo, 1947; M.S., Ohio State, 1949; Ph.D., 1950.
- O'Bannon, Lester Severance, Professor of Mechanical Engineering
B.M.E., Kentucky, 1915; M.E., 1939; Reg. Prof. Engr.
- *Oliver, John Percy, Professor of Engineering Drawing
B.S., Agricultural and Mechanical College of Texas, 1926; M.S., 1936; Reg. Prof. Engr.
- *Orr, Joseph Anderson, Professor of Civil Engineering
B.S., Agricultural and Mechanical College of Texas, 1922; M.S., 1933; Reg. Prof. Engr.
- *Packenham, Edward S., Associate Professor of Business Administration
B.S., Lombard College, 1928; M.S., Agricultural and Mechanical College of Texas, 1950; C.P.A., 1949.
- Page, John Boyd, Dean of the College and of the Graduate School and Professor of Agronomy
B.S., Brigham Young, 1936; M.A., Missouri, 1937; Ph.D., Ohio State, 1940.
- Page, John Orion, Associate Professor of Chemistry
B.S., Rochester, 1927; Ph.D., Illinois 1933.
- *Paine, Leland Shumway, Research Economist of Texas Engineering Experiment Station
A.B., Nebraska, 1922; M.A., Wisconsin, 1926.
- Parker, Grady P., Professor of Education and Head of Department of Education and Psychology
B.A., North Texas State Teachers College, 1929; M.A., Southern Methodist, 1935; Ed.D., Texas, 1942.

- Parker, Travis Jay, Professor of Geology
B.S., Texas Technological College, 1933; M.A., Texas, 1939; Ph.D., 1952;
Reg. Prof. Engr.
- *Parnell, Edward Douglas, Professor of Poultry Science
B.S., Agricultural and Mechanical College of Texas, 1923; M.S., 1934.
- *Paterson, Donald R., Associate Horticulturist, Department of Horticulture
B.S., Cornell, 1947; M.S., California, 1950; Ph.D., Michigan State, 1952.
- Patterson, Raleigh E., Vice Director of Texas Agricultural Experiment Station
B.S., Louisiana, 1934; M.S., Agricultural and Mechanical College of Texas,
1938; Ph.D., 1942.
- *Patton, Robert Hoover, Assistant Professor of Chemistry
B.S., Miami, 1948; M.S., 1951; Ph.D., Florida, 1955.
- Paulson, Walter Ernest, Professor of Agricultural Economics
Ph.B., Wisconsin, 1917; Ph.D., 1923.
- Perry, Bruce A., Horticulturist, Department of Horticulture
B.S., Wake Forest College, 1930; M.A., 1936; Ph.D., Virginia, 1942.
- Peters, Isaac Isaac, Associate Professor of Dairy Science
B.S.A., Manitoba, 1942; M.S., Michigan State College, 1944; Ph.D., Iowa
State College, 1947.
- Peurifoy, Robert Leroy, Professor of Civil Engineering
B.S., Texas, 1927; M.S., 1929; Reg. Prof. Engr.
- Porter, Walter Lee, Professor of Mathematics
A.B., Howard College, 1911; M.S., Agricultural and Mechanical College of
Texas, 1926.
- Potter, George Edwin, Professor of Zoology
B.S., Ottawa, 1921; M.S., Iowa, 1923; Ph.D., 1927; D.Sc., Ottawa, 1946.
- Potter, James Gregor, Professor of Physics and Head of Department
B.S., Princeton, 1928; M.S., New York, 1931; Ph.D., Yale, 1939.
- Potts, Richard Carmichael, Professor of Agronomy and Assistant Dean of
Agriculture
B.S., Oklahoma Agricultural and Mechanical College, 1935; M.S., Agricul-
tural and Mechanical College of Texas, 1945; Ph.D., Nebraska, 1950.
- Potts, William McDaniel, Professor of Chemistry
B.S., Chicago, 1921; M.S., 1927; Ph.D., 1937.
- Prescott, John Mack, Associate Professor of Biochemistry and Nutrition
B.S., Southwest Texas State Teachers College, 1941; M.S., Agricultural
and Mechanical College of Texas, 1949; Ph.D., Wisconsin, 1952.
- Price, Alvin Audis, Dean of the School of Veterinary Medicine
B.S., Agricultural and Mechanical College of Texas, 1940; D.V.M., 1949;
M.S., 1956.
- *Price, Manning A., Associate Professor of Entomology
B.S., Agricultural and Mechanical College of Texas, 1939; M.S., 1941;
Ph.D., Wisconsin, 1952.
- Quinby, John Roy, Agronomist of Texas Agricultural Experiment Station,
Chillicothe
B.S., Agricultural and Mechanical College of Texas, 1924; M.S., 1934.
- Quisenberry, John Henry, Professor of Poultry Science and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1931; M.S., Illinois,
1933; Ph.D., 1936.

- Rae, Kenneth MacFarlane, Lecturer in Oceanography and Meteorology
B.S., University College, London, 1935.
- Rakoff, Henry, Associate Professor of Chemistry
B.S., City College of New York, 1944; M.S., Purdue, 1948; Ph.D., 1950.
- *Randolph, Neal M., Assistant Professor of Entomology
B.S., Agricultural and Mechanical College of Texas, 1934; M.S., 1938.
- Reeves, Robert Gatlin, Professor of Genetics
B.S., Mississippi State College, 1922; M.S., 1923; Ph.D., Iowa State College, 1928.
- Reid, Bobby Leroy, Assistant Professor of Poultry Science
B.S., Agricultural and Mechanical College of Texas, 1950; M.S., 1952;
Ph.D., 1955.
- Reid, Robert Osborne, Associate Professor of Oceanography
B.E., Southern California, 1946; M.S., Scripps Institute of Oceanography, 1948.
- Reinhard, Henry J., Professor of Entomology
B.S., Ohio State, 1915.
- Reiser, Raymond, Professor of Biochemistry and Nutrition
A.B., Western Reserve, 1929; Ph.D., Ohio State, 1936.
- *Rekoff, Michael George, Jr., Instructor of Electrical Engineering
B.S., Agricultural and Mechanical College of Texas, 1951; M.S., 1955.
- *Rhodes, Robert Raymond, Associate Professor of Range and Forestry
B.S.F., Louisiana, 1937; M.S., Agricultural and Mechanical College of Texas, 1951.
- Richardson, Luther Ray, Professor of Biochemistry and Nutrition
B.S., Georgetown College, 1923; A.M., Missouri, 1928; Ph.D., 1932.
- Richmond, Thomas Rollin, Agronomist of Department of Agronomy
(Agricultural Research Service, USDA, cooperating)
B.S., Agricultural and Mechanical College of Texas, 1931; M.S., 1938;
Ph.D., Minnesota, 1948.
- Riggs, John Kamm, Professor of Animal Husbandry
B.S., Iowa State College, 1935; M.S., Agricultural and Mechanical College of Texas, 1941.
- *Roche, John Edward, Associate Professor of Business Administration
B.S., Baylor, 1946; M.A., Texas, 1950; Ph.D., 1956.
- Rode, Norman Frederick, Professor of Electrical Engineering
B.S., Clemson College, 1919; M.S., Agricultural and Mechanical College of Texas, 1929; E.E., Clemson College, 1939; Reg. Prof. Engr.
- Rogers, John Sinclair, Professor of Agronomy and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1938; M.S., 1940;
Ph.D., Harvard, 1949.
- Rosberg, David William, Associate Professor of Plant Physiology and Pathology
B.A., St. Olaf College, 1940; M.S., Ohio State, 1946; Ph.D., 1949.
- *Rose, Norman Carl, Assistant Professor of Chemistry
B.S., California, 1950; Ph.D., Kansas, 1957.
- *Ross, Henry, Professor of Agricultural Education
B.S., Agricultural and Mechanical College of Texas, 1923; M.S., 1935.
- *Rotsch, Melvin Medford, Professor of Architecture
B.S., Texas, 1928; M.Arch., Harvard, 1930.

- Rudder, James Earl, Vice President of the College
B.S., Agricultural and Mechanical College of Texas, 1932.
- Rupel, Isaac Walker, Professor of Dairy Science and Head of Department
B.S., Illinois, 1923; M.S., Wisconsin, 1924; Ph.D., 1932.
- Russell, Daniel, Professor of Rural Sociology
A.B., Baylor, 1922; A.M., Chicago, 1928.
- Russell, William Low, Professor of Geology
B.A., Yale, 1920; M.S., 1922; Ph.D., 1927.
- Sandstedt, Carl Edward, Professor of Civil Engineering
A.B., Leland Stanford, 1910; M.S., Agricultural and Mechanical College of Texas, 1928; Reg. Prof. Engr.
- *Sargent, Frederic Oberlin, Assistant Professor of Agricultural Economics and Sociology
B.A., Colby College, 1942; Ph.D., Wisconsin, 1952.
- *Sarma, Pramod Lal, Assistant Professor of Chemistry
B.S., Calcutta, 1939; Diploma, British Institute of Technology (London), 1944; M.S., Benares, 1948; M.S., Louisiana State, 1951; Ph.D., 1955.
- Saucier, Walter Joseph, Associate Professor of Meteorology
B.S., Southwestern Louisiana Institute, 1942; M.S., Chicago, 1947; Ph.D., 1951.
- *Schiller, Robert Edwin, Jr., Associate Professor of Civil Engineering
B.S., Agricultural and Mechanical College of Texas, 1940; M.S., 1949.
- Schlesselman, George Wilhelm, Professor of Geography and Head of Department
B.A., Iowa State Teachers College, 1927; M.A., Clark, 1928; Ph.D., Nebraska, 1935.
- †Schmidt, Hubert, Professor of Veterinary Research
B.S., Agricultural and Mechanical College of Texas, 1908; D.V.M., Royal Veterinary School, Berlin, Germany, 1912.
- Schram, Alfred Francis, Associate Professor of Chemistry
B.A., Oklahoma, 1941; M.S., 1943; Ph.D., 1948.
- Schroeder, Melvin Carroll, Associate Professor of Geology
B.S., State College of Washington, 1942; M.S., 1947; Ph.D., 1953.
- Schulz, Carl William, Professor of Veterinary Medicine and Surgery and Head of Department
D.V.M., Kansas State College, 1934.
- *Seward, Clay Luzenberg, Jr., Associate Professor of Geology
B.S., Agricultural and Mechanical College of Texas, 1941; M.S., 1950; Geol.E., 1953.
- Shrode, Robert Ray, Professor of Genetics (Agricultural Research Service, USDA, cooperating)
B.S., Colorado Agricultural and Mechanical College, 1943; M.S., Iowa State College, 1945; Ph.D., 1949.
- Simmang, Clifford Max, Professor of Mechanical Engineering and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1936; M.S., 1938; Ph.D., Texas, 1952; Reg. Prof. Engr.

*Associate Member

†Deceased January 13, 1953.

- *Sims, Stillman Austin, Assistant Professor of Mathematics
B.S., Southwest Texas State Teachers College, 1939; M.S., Agricultural and Mechanical College of Texas, 1944.
- Skrabanek, Robert Leonard, Professor of Rural Sociology
B.S., Agricultural and Mechanical College of Texas, 1942; M.S., 1947; Ph.D., Louisiana, 1949.
- Smith, Elmer Gillam, Professor of Physics
A.B., Amherst College, 1919; M.S., Agricultural and Mechanical College of Texas, 1925; B.S., 1934; M.E., 1939; Ph.D., Texas, 1941.
- *Smith, Fred Emmett, Professor of Geology.
B.S., Louisiana State, 1930; M.S., 1932.
- Smith, Harris Pearson, Professor of Agricultural Engineering
B.S., Mississippi Agricultural and Mechanical College, 1917; M.S., Agricultural and Mechanical College of Texas, 1926; A.E., 1940.
- Smith, Hilton Atmore, Professor of Veterinary Pathology and Head of Department
D.V.M., Colorado Agricultural and Mechanical College, 1928; M.S., Michigan, 1935; Ph.D., 1949.
- *Smith, J. C., Superintendent of Substation No. 3, Angleton
B.S., Agricultural and Mechanical College of Texas, 1939; M.S., 1947.
- *Snyder, Roy Webster, Extension Meat Specialist, Texas Agricultural Experiment Station
B.S., Iowa State College, 1921; M.S., 1922.
- *Sorensen, Anton Marinus, Jr., Associate Professor of Animal Husbandry
B.S., Agricultural and Mechanical College of Texas, 1949; M.S., Cornell, 1951; Ph.D., 1953.
- *Sorensen, Harold Benjamin, Associate Professor of Agricultural Economics and Sociology
B.S., South Dakota State College, 1940; M.S., Oklahoma Agricultural and Mechanical College, 1948; Ph.D., Agricultural and Mechanical College of Texas, 1955.
- Sorenson, Jerome Wallace, Professor of Agricultural Engineering
B.S., Agricultural and Mechanical College of Texas, 1935; M.S., 1948.
- Sorrels, Joseph Harrell, Professor of Civil Engineering
A.B., Texas Christian, 1924; M.S., Vanderbilt, 1925; B.S., Agricultural and Mechanical College of Texas, 1946; Reg. Prof. Engr.
- *Southern, John H., Agricultural Economist of Texas Agricultural Experiment Station (Agricultural Research Service, USDA, cooperating)
B.S., Oklahoma Agricultural and Mechanical College, 1936; M.S., Agricultural and Mechanical College of Texas, 1949.
- Sperry, John Jerome, Professor of Biology
B.A., Nebraska, 1936; M.A., Missouri, 1938; Ph.D., Nebraska, 1942.
- Sperry, Omer Edison, Professor of Range and Forestry
A.B., Peru, Nebraska, State College, 1925; M.A., Nebraska, 1931; Ph.D., 1934.
- *Staten, Raymond D., Assistant Professor of Agronomy
B.S., Oklahoma Agricultural and Mechanical College, 1947; M.S., Nebraska, 1949; Ph.D., 1951.
- Steen, Ralph Wright, Professor of History and Head of Department of History and Government
B.A., McMurry College, 1927; M.A., Texas, 1929; Ph.D., 1934.

- Stephenson, Henson Knowlen, Professor of Civil Engineering and Research Engineer of Texas Engineering Experiment Station
B.S., Alabama Polytechnic Institute, 1923; M.S., Michigan, 1931; C.E., Alabama Polytechnic Institute, 1941.
- Stevenson, Robert M., Professor of Business Administration
B.A., Duke, 1937; M.A., Pennsylvania State College, 1946; C.P.A., 1948; D.B.A., Indiana, 1955; C.L.U., 1955.
- *Stewart, Robert Blaylock, Assistant Professor of Plant Physiology and Pathology
B.S., Oklahoma Agricultural and Mechanical College, 1950; M.S., Agricultural and Mechanical College of Texas, 1953; Ph.D., 1957.
- *Stokes, Elmore Ewing, Jr., Assistant Professor of English
B.A., Texas, 1943; M.A., 1948; Ph.D., 1951.
- Street, William Ezra, Professor of Engineering Drawing and Head of Department
B.S., Texas Technological College, 1930; M.A., 1933; LL.D., Harding College, 1947; Reg. Prof. Engr.
- *Thiers, Harry Delbert, Associate Professor of Biology
B.A., Texas, 1941; M.A., 1947; Ph.D., Michigan, 1955.
- *Thomas, Gerald W., Assistant Professor of Range and Forestry
B.S., Idaho, 1941; M.S., Agricultural and Mechanical College of Texas, 1951; Ph.D., 1954.
- *Thompson, John George Hatch, Professor of Mechanical Engineering
B.S., Pennsylvania State College, 1933; M.E., 1938; M.S., Agricultural and Mechanical College of Texas, 1950; Reg. Prof. Engr.
- Timm, Tyrus Raymond, Professor of Agricultural Economics and Sociology and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1934; M.S., 1936; M.P.A., Harvard, 1947; D.P.A., 1949.
- *Tishler, Carl Edward, Professor of Health and Physical Education and Head of Department
B.S., Ohio State, 1926; M.A., Western Reserve, 1935.
- *Tittle, Morris Edward, Assistant Professor of Mathematics
B.A., East Texas State Teachers College, 1923; M.A., Texas, 1937.
- Trotter, Ide Peebles, Associate Dean of the Graduate School, Professor of Agronomy, and Extension Consultant on Personnel and Professional Improvement
B.A., Mississippi College, 1915; B.S., Mississippi State College, 1918; M.S., 1921; Ph.D., Wisconsin, 1933.
- *Truettner, Willard Irving, Professor of Mechanical Engineering
B.S., Michigan, 1928; M.S.E., 1930; Reg. Prof. Engr.
- Turk, Richard Duncan, Professor of Veterinary Parasitology and Head of Department
D.V.M., Kansas State College, 1933; M.S., Agricultural and Mechanical College of Texas, 1939.
- Vanderzant, Carl, Associate Professor of Dairy Science
B.S., Wageningen, Holland, 1947; M.S., 1949; M.S., Iowa State College, 1950; Ph.D., 1953.
- Vanderzant, Erma Schumacher, Biochemist of Department of Biochemistry and Nutrition
B.S., Iowa State, 1943; Ph.D., 1953.

*Associate Member

- Varvel, Walter A., Professor of Psychology
A.B., Kansas, 1932; M.A., 1933; Ph.D., 1938.
- Vestal, Donald McKee, Research Engineer of Texas Engineering Experiment Station and Professor of Mechanical Engineering
B.S., Agricultural and Mechanical College of Texas, 1938; M.S., 1950.
- *Vezey, Edward Earl, Professor of Physics
B.S., Oklahoma Agricultural and Mechanical College, 1910; M.S., Agricultural and Mechanical College of Texas, 1927.
- *Waldrip, William Jasper, Assistant Professor of Range and Forestry
B.S., Agricultural and Mechanical College of Texas, 1949; M.S., 1950.
- *Wallmo, Olof Charles, Assistant Professor of Wildlife Management
B.S., Utah State Agricultural College, 1946; M.S., Wisconsin, 1948; Ph.D., Agricultural and Mechanical College of Texas, 1957.
- Walton, Ernest Vernon, Professor of Agricultural Education and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1937; M.S., 1947.
- *Wamble, Albert Cecil, Research Engineer of Texas Engineering Experiment Station
B.S., Agricultural and Mechanical College of Texas, 1933.
- *Ward, Robert Page, Professor of Electrical Engineering
B.S., Agricultural and Mechanical College of Texas, 1924; M.S., 1934.
- Warwick, Bruce Lester, Animal Husbandman and Geneticist of Texas Agricultural Experiment Station, McGregor (Agricultural Research Service, USDA, cooperating)
D.V.M., Iowa State College, 1919; M.S., Wisconsin, 1922; Ph.D., 1925.
- Watkins, Gustav McKee, Professor of Plant Physiology and Pathology and Head of Department
B.A., Texas, 1929; M.S., 1930; Ph.D., Columbia, 1935.
- *Watkins, Thomas David, Jr., Professor of Animal Husbandry.
B.S., California, 1940; M.S., 1947; Ph.D., Maryland, 1954.
- Weaver, Paul, Distinguished Professor of Geology and Geophysics
A.B., Columbia, 1908; Reg. Prof. Engr.
- Weekes, Donald Fessenden, Professor of Physics
B.S., Middlebury College, 1924; M.A., Amherst College, 1926; Ph.D., Cornell, 1937.
- *Weihing, Ralph Martin, Agronomist of Texas Agricultural Experiment Station, Beaumont (Agricultural Research Service, USDA, cooperating)
B.S., Colorado Agricultural and Mechanical College, 1930; M.S., Nebraska, 1932; Ph.D., 1934.
- Whitehouse, U. Grant, Technical Director, Electron Microscope Laboratory, Biochemistry and Nutrition Department
B.S., Kentucky, 1940; M.S., 1941; M.S., Iowa, 1942; Ph.D., Agricultural and Mechanical College of Texas, 1955.
- Whiting, Robert Louis, Professor of Petroleum Engineering and Head of Department
B.S., Texas, 1939; M.S., 1943; Reg. Prof. Engr.
- *Whitney, Howard Stephen, Assistant Professor of Agricultural Economics
B.S., Oklahoma Agricultural and Mechanical College, 1943; M.S., 1948.

- Wilcox, George Barton, Professor of Education
B.S., Sam Houston State Teachers College, 1912; B.S., Agricultural and Mechanical College of Texas, 1923; A.M., Columbia, 1926.
- *Wilkes, Lambert H., Associate Professor of Agricultural Engineering
B.S., Clemson Agricultural and Mechanical College, 1948; M.S., Agricultural and Mechanical College of Texas, 1953.
- Wilson, Basil Wrigley, Associate Professor of Oceanography
B.S., Cape Town, 1931; M.S., Illinois, 1939; C.E., 1940; D.Sc., Cape Town, 1953.
- Wingren, Roy Matthew, Professor of Mechanical Engineering
B.S., Agricultural and Mechanical College of Texas, 1927; M.S., 1934; Reg. Prof. Engr.
- *Wood, Norris Phillip, Assistant Professor of Microbiology
B.S., Hartwick College, 1949; M.S., Cornell, 1951; Ph.D., Pennsylvania, 1955.
- *Woolket, Joseph John, Professor of Modern Languages and Head of Department
A.B., Oberlin College, 1924; M.A., 1925.
- Wright, Samuel Robert, Professor of Civil Engineering and Head of Department
B.S., Agricultural and Mechanical College of Texas, 1922; M.S., 1928; C.E., 1931; Ph.D., 1946; Reg. Prof. Engr.
- *Wykes, Stanley Allen, Professor of Industrial Engineering
B.S., Pennsylvania State College, 1940; M.S., Virginia Polytechnic Institute, 1946; Reg. Prof. Engr.
- *Yantis, Theodore R., Associate Professor of Business Administration
A.B., Otterbein College, 1947; M.B.A., Ohio State, 1949; Ph.D., 1955.
- Young, Paul A., Plant Pathologist of Texas Agricultural Experiment Station, Jacksonville
B.S., Wabash College, 1921; M.A., Illinois, 1923; Ph.D., 1925.
- Young, Vernon Alphus, Professor of Range and Forestry and Head of Department
B.S., Utah State Agricultural College, 1923; M.S., Iowa State College, 1924; Ph.D., Minnesota, 1929.
- Zimmerman, Howard Karl, Jr., Associate Professor of Chemistry
B.S., Washington, 1942; M.A., Leland Stanford, 1944; Ph.D., Oregon, 1948.
- *Zingaro, Ralph Anthony, Assistant Professor of Chemistry
B.S., City College of New York, 1946; M.S., Kansas, 1949; Ph.D., 1950.

THE GRADUATE SCHOOL

The principal objective of the Graduate School is to offer education beyond the Bachelor's level to those men who aspire to become intellectual leaders in various professions and in various fields of teaching and research. It undertakes to assist graduate students in developing and pursuing individual educational programs requiring superior accomplishment through carefully directed intellectual activity.

GENERAL INFORMATION

The Graduate Faculty. The faculty of the Graduate School consists of the President, the Vice Presidents, the Deans, the Directors, and selected members of the staff who are actively engaged in recognized scholarly activity, fundamental research, or professional activity.

The Dean of the Graduate School is responsible for the academic program of all graduate students. He is the representative of the Graduate Faculty and is the medium of communication between the graduate students and the College administration.

The Graduate Council is a standing committee of the Academic Council. It is an advisory body to the Dean of the Graduate School, who is the chief administrative officer of the Graduate Faculty. There is a Committee on Graduate Instruction in each of the several schools. These committees are responsible for making recommendations for graduate work in the school concerned, for making recommendations regarding general policies, for reviewing thesis proposals, and for other matters pertaining to graduate work in their schools.

Degrees Offered. Advanced instruction is offered leading to the following degrees:

Master of Agriculture (M.Agr.)
 Master of Architecture (M.Arch.)
 Master of Business Administration (M.B.A.)
 Master of Education (M.Ed.)
 Master of Engineering (M.Eng.)
 Master of Science (M.S.)
 Doctor of Philosophy (Ph.D.)

The following professional degrees in engineering are offered to graduates of this college:

Aeronautical Engineer (Aero.E.)
 Agricultural Engineer (A.E.)
 Architectural Engineer (Arch.E.)
 Chemical Engineer (Ch.E.)
 Civil Engineer (C.E.)
 Electrical Engineer (E.E.)
 Geological Engineer (Geol.E.)
 Industrial Engineer (Ind.E.)
 Mechanical Engineer (M.E.)
 Petroleum Engineer (P.E.)

GRADUATE DEGREES CURRENTLY OFFERED

A listing of graduate degrees currently offered is as follows:

School of Agriculture

Master of Agriculture

Master of Education, with a major in
 Agricultural Education

Master of Science, with majors in
 Agricultural Economics, including Farm and Ranch Management
 Agricultural Education

NEW ENGINEERING BUILDING . . . Headquarters of Dean of Engineering, Engineering Experiment Station, Aeronautical Engineering and Industrial Engineering.

Agricultural Engineering

Agronomy

Animal Breeding (Interdepartmental)

Animal Husbandry, including Breeding, Nutrition, Meats, Physiology of Reproduction, and Wool and Mohair

Animal Nutrition (Interdepartmental)

Animal Parasitology (Interdepartmental)

Biochemistry and Nutrition

Dairy Science, including Dairy Production and Dairy Technology (Manufacturing)

Entomology

Floriculture

Food Technology (Interdepartmental)

Genetics, including Forest Genetics

Horticulture, including Fruit and Vegetable Processing

Landscape Architecture

Physiology of Reproduction (Interdepartmental)

Plant Breeding (Interdepartmental)

Plant Pathology

Plant Physiology

Poultry Science, including Poultry Breeding, Poultry Nutrition, and Poultry Technology (Processing and Marketing)

Range Management

Rural Sociology

Soil Chemistry

Soil Physics

Wildlife Management

Doctor of Philosophy, with majors in

Agricultural Economics

Agronomy

Animal Breeding (Interdepartmental)

Animal Husbandry

Animal Nutrition (Interdepartmental)

Animal Parasitology (Interdepartmental)

Biochemistry and Nutrition

Dairy Science

Entomology

Food Technology (Interdepartmental)

Genetics, including Forest Genetics

Horticulture

Physiology of Reproduction (Interdepartmental)

Plant Breeding (Interdepartmental)

Plant Pathology

Plant Physiology

Poultry Science

Range Management

Soil Chemistry

Soil Physics

Wildlife Management

School of Arts and Sciences**Master of Business Administration, with majors in**

Accounting

General Business, including Finance, Insurance, Marketing, and Personnel Management

Master of Education**Master of Science, with majors in**

Bacteriology

Botany

Chemistry

Economics
 Education
 Mathematics
 Meteorology
 Oceanography
 Physics
 Zoology

Doctor of Philosophy, with majors in
 Botany
 Chemistry
 Mathematics
 Oceanography
 Physics
 Zoology

School of Engineering

Master of Architecture, including Design and Construction

Master of Education, with a major in
 Industrial Education

Master of Engineering, with majors in
 Aeronautical Engineering
 Agricultural Engineering
 Chemical Engineering
 Civil Engineering
 Electrical Engineering
 Geological Engineering
 Industrial Engineering
 Mechanical Engineering
 Petroleum Engineering

Master of Science, with majors in
 Aeronautical Engineering
 Chemical Engineering
 Civil Engineering, including Highway, Hydraulic, Municipal and
 Sanitary, Structural and Soil Mechanics and Foundations
 Electrical Engineering
 Geological Engineering
 Geology
 Geophysics
 Industrial Education
 Industrial Engineering
 Mechanical Engineering
 Petroleum Engineering

Doctor of Philosophy, with majors in
 Chemical Engineering
 Civil Engineering
 Electrical Engineering
 Geology
 Geophysics
 Mechanical Engineering
 Petroleum Engineering

School of Veterinary Medicine

Master of Science, with majors in
 Veterinary Anatomy
 Veterinary Microbiology
 Veterinary Medicine
 Veterinary Parasitology
 Veterinary Pathology
 Veterinary Physiology

Doctor of Philosophy, with a major in
 Veterinary Pathology

Graduate Courses. A graduate course is an advanced course requiring critical analysis and study. Such courses normally require frequent use of the library for reference to papers reporting original researches. Four types of graduate instruction are recognized: (1) lecture courses requiring organization by the instructor of material on an advanced level, (2) supervised laboratory courses, (3) seminars for the critical study of an organized field through reports presented by students or instructors, and (4) research by individual students under the direction of members of the Graduate Faculty.

Courses at the undergraduate level but approved for graduate credit may be used as specified later.

ADMISSION

To be admitted to the Graduate School (except under double-registration) an applicant (1) must hold a baccalaureate degree from a college or university of recognized standing; (2) must show promise, as judged by his previous record, of ability to satisfactorily pursue advanced study and research; and (3) must have had adequate preparation to enter graduate study in the field chosen.

Inquiries regarding admission to the Graduate School should be addressed to: The Director of Admissions, Agricultural and Mechanical College of Texas, College Station, Texas. Inquiries about facilities for advanced studies, research, and requirements for graduate work in specific fields should be addressed to the department in which the principal work is offered.

A formal application is required of all persons seeking admission to the Graduate School. The application forms, which are available at the office of the Director of Admissions and Registrar, should be filed not later than four weeks prior to the opening of the semester. Admission to the Graduate School cannot be completed until all the credentials enumerated on the application form have been filed and evaluated.

RICHARD COKE BUILDING . . . College administrative offices, including the office of the Graduate School, are located in this building.

In addition to the records sent to this office, the student should have in his possession a copy of his record for use in conference with members of the Graduate Faculty in planning his work.

Admission to the Graduate School may not be approved in instances where the facilities and staff available in the particular field are not adequate to take care of the needs of the student.

Scholastic Record. The normal requirement for admission to the Graduate School is a record during at least the last two years of academic training which gives evidence of ability to successfully accomplish graduate work in the chosen fields of study.

A student whose academic record is not satisfactory for this purpose, or who is changing fields of study, may be required to take additional work to strengthen his background and preparation for graduate study in his chosen field. Such work will be arranged in conference with the student's committee or the chairman of his major department.

Before accepting a student for graduate work, a department in which he expects to take work may require that he take a comprehensive examination covering the basic undergraduate work in that field.

Each graduate student is responsible for familiarizing himself with the rules and regulations pertaining to graduate study and the requirements for advanced degrees.

REGISTRATION

Before his first registration the student should consult the graduate advisor representing the field of his major interest, who will assist him in planning his first registration.

The maximum load for full-time graduate students is 16 hours in a regular semester, or 6 hours in a summer term. Staff members, during full-time employment, are limited to a maximum enrollment of 4 hours of course work in a regular semester and 3 hours in a 12-week summer session. Graduate assistants, on half-time employment, may take up to 12 hours in a regular semester and up to 8 hours in a 12-week summer session.

Double Registration. Undergraduates of this college who at the beginning of a given semester are within 8 hours of graduation, or at the beginning of a summer session are within 3 hours of graduation, may be admitted to the Graduate School on a provisional status. Such students must complete the undergraduate work and obtain the Bachelor's degree during the first semester or summer session in the Graduate School. The maximum total credit hour load for those enrolled for graduate credit is 16 hours in the regular semester, or 6 hours in a summer term.

Graduate Credit. Graduate credit will not be allowed for any course unless the student has been granted admission to the Graduate School and is registered therein when the course is taken.

Foreign Students. A foreign student is subject to the same requirements for admission and candidacy as students from institutions in the United States. He may be required to pass an examination in English. The purpose of such an examination is to determine whether the student has sufficient command of English to profit by graduate work here.

Graduate Advisors. A graduate student entering the College for the first time is required to consult with the advisor in his particular field of interest regarding courses and various programs of study. Departmental graduate advisors will be available for consultation several days prior to registration. Early in the first semester an advisor will assist each new graduate student in working out a Degree Program for consideration by the student's full committee.

FEES

The fees of the graduate student may vary slightly from year to year. Fees for the session of 1958-59 are as follows:

	First Semester	Second Semester	Summer Session First Term	Summer Session Second Term
Matriculation Fee for Texas residents.....	\$ 50.00	\$ 50.00	\$ 25.00	\$ 25.00
Matriculation Fee for nonresidents.....	\$200.00	\$200.00	\$100.00	\$100.00
Medical Fee.....	\$ 10.00	\$ 10.00	\$ 4.00	\$ 4.00
Student Center Fee.....	\$ 2.00	\$ 2.00	\$ 1.00	\$ 1.00
Student Activities Fee (Optional)	\$ 21.90	\$ 11.55*	\$ 1.75	\$ 1.75

Each applicant for an advanced degree is required to pay a diploma fee of \$2.50. A fee of \$9.75 is required to cover the cost of binding three copies of the thesis. Each candidate for the doctorate is required to pay a dissertation abstract publication fee of \$12.00. A copy of the Fiscal Office receipt for payment of these fees must be presented to the office of the Dean of the Graduate School and recorded on the student's records.

Any student withdrawing officially (a) during the first week of class work in a semester will receive a refund of four-fifths of the matriculation fee and medical fee; (b) during the second week of class work, three-fifths; (c) during the third week of class work, two fifths; (d) during the fourth week of class work, one-fifth; (e) after the fourth week of class work, nothing. No refunds will be made until ten days have elapsed from the time the fees were paid.

The matriculation fee for residents of Texas registering for less than 12 credit hours will be reduced by \$4.00 for each credit hour less than 12 with a minimum matriculation fee of \$15.00. The matriculation fee for non-resident students registering for less than 12 credit hours will be reduced by \$16.00 for each credit hour less than 12. During a six-week summer term, students registering for 4 or more credit hours pay the matriculation fee of \$25.00 for Texas residents or \$100.00 for nonresidents. Nonresident students registering for less than four credit hours for a six-week summer term pay a matriculation fee of \$25.00 per credit hour. Resident students registering for three hours will pay \$21.00; for two hours, \$17.00; and for one hour, \$15.00. The absentia registration fee and the fee for "thesis only" is \$15.00 for Texas residents and \$17.50 for nonresidents.

COLLEGE HOUSING—DORMITORY AND APARTMENT

While residence in the College dormitories is not required of graduate students, a great majority of the unmarried men prefer to room in a dormitory, in sections set apart for their use. For married students a limited number of College-owned apartments, both furnished and unfurnished, are available. Rentals range from \$24.50 to \$37.50 per month, including all utilities. Application for a graduate apartment should be made directly to the Housing Office, Agricultural and Mechanical College of Texas, College Station, Texas.

DEGREE PROGRAM

A graduate student's Degree Program includes all courses which are listed on his official form (except prerequisites or "other courses"). All courses on the approved Degree Program must be completed with a satisfactory grade to meet the requirements for the degree. Changes in an approved Degree Program can be made only by petition approved by the student's full committee.

*Not to be paid by students who paid the Student Activities Fee in the first semester.

SCHOLARSHIP

A graduate student is expected to prove himself worthy of the privilege of advanced study. Graduate courses demand a substantially greater effort on the part of the student than is characteristic of undergraduate courses.

A 2.00 grade point ratio (B average) is required on a graduate student's Degree Program. If this ratio is not maintained, the student may be denied further registration in the Graduate School. C is the lowest grade for which graduate credit will be given.

Final examinations in all formal courses are required of all graduate students.

RESIDENCE REQUIREMENTS

The minimum time required to qualify for an advanced degree varies with the ability and preparation of the student. Students may find it necessary to extend their studies beyond the minimum requirements. Specific minimum residence requirements are indicated in connection with the respective degrees.

PETITIONS

Exceptions to published rules may be requested by proper petition to the Graduate Council. If regarded as fully justifiable, on the basis of the facts presented, limited exceptions to some rules may be approved.

Any changes in membership of a student's committee, program of study, etc., must be proposed by petition to the Dean of the Graduate School with endorsements by all members of the student's committee.

FIELDS OF SPECIALIZATION

An approved field of specialization, selected by the student, will constitute the major. The courses in the major field of specialization may be in one department, or they may be chosen from two or more departments provided that such courses contribute directly to the major field of specialization.

For administrative purposes the department of the chairman of the student's committee will be considered the administrative department.

The presently offered fields of specialization for both the Master of Science and Doctor of Philosophy degrees which involve courses in more than one department are animal breeding, animal nutrition, animal parasitology, food technology, physiology of reproduction, plant breeding, soil chemistry, and soil physics.

NUCLEAR ENERGY TECHNOLOGY

Graduates of any of the principal fields of engineering or of the basic sciences can arrange a program which provides:

1. A minimum significant training in the nuclear field in support of a major in the student's basic field.
2. A maximum of training in the nuclear field so that this becomes, in effect, the major field with the basic field remaining as a minor.
3. A degree of specialization intermediate to the first two listed.

Programs for both the Master's and Doctor's degrees can be designed, but for those desiring to emphasize the nuclear field the emphasis is at the Master's level for the present. All of the above programs will lead to the degree in the student's basic major field.

Programs of study are available which satisfy the criteria of the Atomic Energy Commission Special Fellowships in Nuclear Energy Technology.

An AGN-201 Nuclear Training Reactor is available for use in the nuclear technology work.

TYPES OF COURSES

Regular Courses are those offered in regular class schedules on the campus.

Extension Courses are for part-time students. They are offered by members of the College staff, off the campus, usually in evening or week-end classes. Registration in 685 Problems courses alone, by a student not resident at the College, shall be considered on the same basis as Extension Courses and shall come under the limitations applying to them.

Field Courses are full time courses of a minimum duration of one calendar week per hour of credit offered by regular staff members at outlying units of the Texas A. and M. College System or at other points affording unusual laboratory or field work facilities.

Workshop Courses are courses in which the class plans the problems to be studied and carries out the work of the class through student leadership under the supervision and guidance of the instructor.

Departments offering off-campus or week-end courses are responsible to the Director of Admissions and Registrar for proper procedure and records of registration. Advance approval should be obtained from the Dean of the School concerned and from the Dean of the Graduate School as to the course, fees, minimum enrollment, instructor, and location each time the course is offered. All students enrolling for graduate credit must have prior admission to the Graduate School.

THE AGN-201 NUCLEAR TRAINING REACTOR . . . Available for training and experimentation in the various sciences and engineering fields in which nuclear science and technology are important.

THE DEGREE OF MASTER OF SCIENCE

Residence. The minimum residence requirement is two semesters of at least 12 credit hours of graduate work each, five six-week summer terms, or an equivalent approved by the Dean of the Graduate School. Full-time resident staff members of the College or any of its closely affiliated organizations whose headquarters are on the campus may satisfy residence requirements while employed. Specific authorization for such joint programs must be granted in advance by the employing agency.

Student's Committee. A student should consult with the departmental graduate advisor or department chairman in the field of his major interest for the selection of his graduate committee. A committee for the Master's degree will be composed of not less than three members of the Graduate Faculty. The chairman of the committee will direct the student's total graduate program.

Degree Program. The student's committee, in consultation with the student, will develop his Degree Program. This should be completed before the end of the eighth week of the first semester or the end of the first six-week summer term. The Degree Program will then be filed with the Dean of the Graduate School, whose approval is required.

This Degree Program must be submitted on the official form. Any prerequisite courses recommended should be included on the form. All courses listed on the form must be cleared to the satisfaction of the committee.

Thesis Proposal. The student, in consultation with members of his committee, should prepare a thesis proposal for approval by the Committee on Graduate Instruction of the School in which his major department is located. The proposal must be filed with the Dean of the Graduate School at least 14 weeks prior to the close of the semester or summer session in which the student expects to receive his degree.

Credit Requirement. A minimum of two full semesters of approved courses and research is required for the Master of Science degree. Most of the work should be graduate courses. On recommendation of the student's committee, certain courses may be selected from those listed "For Graduates and Advanced Undergraduates." In no case may more than 12 hours of such courses be used in satisfying the requirements for any Master's degree.

For the degree of Master of Science with a major in Agricultural Education, not less than 10 credit hours, but not more than 16 credit hours, may be taken in the student's major field.

Ordinarily the student will devote the major portion of his time to work in one field or two closely related fields. Other work will be in supporting fields of interest. In general, not less than one-third of the course work, exclusive of research, should be taken in one or more fields outside of the major field.

Limitations on the Use of Certain Courses. If otherwise acceptable, certain courses may be used toward meeting residence and credit hour requirements for the Master's degree under the following limitations:

1. Not more than 6 hours of extension credit, including any 685 Problems courses taken by a student not then in residence at the college.
2. Not more than 6 hours of resident week-end courses.
3. Not more than 6 hours of workshop courses.
4. Not more than 8 hours each of research, thesis, special problems or research methods, nor more than 12 hours of any combination of these.
5. Not more than 2 hours of seminar.
6. Not more than 15 hours of any combination of the above.

7. In all cases at least one regular semester or the equivalent of three six-week summer terms must be completed on this campus.

This regulation does not apply in the case of specific programs of off-campus work which have been approved by the Academic Council.

8. All work accepted in fulfillment of the Master's degree must have been completed within a period of six years before awarding the degree. Permission to reinstate out-of-date courses by current written examination may be requested by proper petition to the Dean of the Graduate School.

Transfer of Credit. Not more than 4 hours of transfer credit may be counted toward degree requirements, except that a student having earned 12 hours of graduate resident credit at the Agricultural and Mechanical College of Texas may upon the advice of his committee and with the advance approval of the appropriate School Committee be authorized to take a limited amount of specified courses not available at this institution at another approved Graduate School.

Foreign Languages. There is no specific language requirement for the Master's degree. Departments may, at their discretion, require a reading knowledge of one or more foreign languages.

Limitations for Staff Members. Members of the resident staff of the Texas Agricultural and Mechanical College System above the rank of assistant professor, or its equivalent, will not be granted a Master's degree at this institution. They may, however, enroll for graduate work.

Thesis. An acceptable thesis is required for the degree of Master of Science. The thesis should embody original work on the part of the candidate. It must be grammatically correct, reflecting the ability of the candidate to express himself clearly. The general format should be consistent with that used in scientific journals in the candidate's field. Specific instructions on form can be obtained from the office of the Dean of the Graduate School.

The original and the first two copies of the thesis in its final form must be filed with the Dean of the Graduate School, after approval by the student's committee, by dates announced each semester.

A thesis binding fee must be paid to the Fiscal Department and the receipt shown to the secretary of the Dean of the Graduate School before the degree can be conferred. Instructions for typing may be obtained from the Graduate Dean's office.

Final Examination. The candidate is required to take a final examination after the thesis has been completed and filed in the office of the Graduate School, and all other requirements for the degree have been completed. Students must be registered in the College in the semester in which the examination is to be given. The examination covers the thesis and all work taken on the Degree Program. It may be written or oral, or both, at the option of the candidate's committee.

Final examinations are conducted by the candidate's committee as finally constituted. The examination is open.

THE DEGREE OF MASTER OF AGRICULTURE

The program of study leading to the degree of Master of Agriculture, for which a thesis is not required, is designed to serve those who desire additional training in agriculture and who have had one or more years of satisfactory experience in teaching, extension work, or similar fields. It is designed to offer broad training in related fields of agriculture and is without departmental designation.

A minimum of 36 hours of approved courses is required. Two written reports for which up to 4 hours credit may be given are also required.

Detailed requirements for this degree may be obtained upon application to the office of the Dean of the Graduate School.

THE DEGREE OF MASTER OF ARCHITECTURE

The graduate program offered in the design option by the Division of Architecture leads to the degree of Master of Architecture. The requirements for this degree are identical with those for the degree of Master of Science.

THE DEGREE OF MASTER OF BUSINESS ADMINISTRATION

The degree of Master of Business Administration is granted to students whose major programs may be in either accounting or general business.

Under general business, students may prepare for work in finance, insurance, marketing, personnel administration, or statistics. The requirements for this degree are identical with those for the degree of Master of Science.

THE DEGREE OF MASTER OF EDUCATION

Graduate students majoring in agricultural education, education, or industrial education may become candidates for the degree of Master of Education on recommendation of the heads of their major departments.

The requirements for this degree are the completion of 36 hours of course work and a satisfactory comprehensive final examination. A thesis is not required for this degree.

For the degree of Master of Education with a major in agricultural education, not less than ten credit hours, but not more than 18 credit hours, will be taken in the student's major field.

Except as noted above the requirements for the degree of Master of Education are identical with those for the degree of Master of Science.

A special program leading to the degree of Master of Education is available for high school science teachers. Details can be obtained on application.

THE DEGREE OF MASTER OF ENGINEERING

A student holding a degree of Bachelor of Science in engineering, or a senior during his last semester, may apply for admission to the Graduate School to work toward the non-thesis degree of Master of Engineering, majoring in his particular field of engineering. Approximately one-third of the required 36 credit hours of course work will be taken in fields outside of the major field.

The work in the major field will include one or two written reports (not necessarily involving results of research conducted by the candidate) for which up to four hours credit in 685, Problems courses, is permissible.

Except as noted above, the requirements for the degree of Master of Engineering are identical with those for the degree of Master of Science.

PROFESSIONAL DEGREES IN ENGINEERING

The professional degrees in engineering are available to graduates of this college. These degrees are offered on the basis of acceptable professional experience, a thesis or its equivalent, and an examination. Details concerning requirements for this degree may be obtained upon application to the office of the Dean of the Graduate School.

THE DEGREE OF DOCTOR OF PHILOSOPHY

Work leading to the degree of Doctor of Philosophy is designed to give the candidate a thorough and comprehensive knowledge of his professional

field and to train him in methods of research. The final basis for granting the degree shall be the candidate's grasp of the subject matter of a broad field of study, and his demonstrated ability to do independent research. In addition, the candidate must have acquired the ability to express himself clearly and forcefully both in oral and written language. The degree is not granted solely for the completion of course work, residence, and technical requirements, although these must be met.

Residence. The minimum period of time required for the degree of Doctor of Philosophy is six semesters of full-time graduate study, or its equivalent, beyond the Bachelor's degree. All of the work except as noted below, must be done in resident graduate study at some approved educational institution, and at least two of the last four semesters must be spent at the Agricultural and Mechanical College of Texas.

Candidates for the Ph.D. degree will normally satisfy residence requirements by either (1) two semesters of 12 hours each, or (2) one semester of 12 hours and one summer session of 12 hours.

Full-time staff members engaged in graduate study and registered for less than 12 semester hours will receive proportionate residence credit.

Credit for Work in Absentia. Upon recommendation of his committee and approval of the Dean of the Graduate School, a student may be permitted to carry on work in connection with his dissertation in absentia. In case credit is desired for off-campus research, the student must maintain his registration in the College.

Time Limit. All work for this degree must be completed within the seven-year period immediately preceding the final examination or within a five-year period if the student enters with a Master's degree.

Student's Committee. After admission to graduate study, the student will consult the head of his major or administrative department concerning appointment of his advisory committee. This committee will consist of not less than five members of the graduate faculty representative of the student's several fields of study and research.

The committee will evaluate the student's previous training and degree objectives. They will then outline a degree program and research problem which, with the dissertation, will constitute the basic requirements for the degree. The degree program will be submitted on standard forms for the approval of the Dean of the Graduate School. The field of study may be chiefly in one department or may be in a combination of departments. The chairman of the committee will normally have immediate supervision of the student's research and dissertation.

Languages. All students are required to possess a competent command of English. In addition, a reading knowledge of French and German is required of all candidates for the doctorate. Another language may be substituted for one of these upon the recommendation of the student's committee and approval of the Dean of the Graduate School, provided it is shown that there is a substantial body of knowledge in the student's field in the substitute language. An alternative method of meeting the foreign language requirement will be to demonstrate a comprehensive mastery of one of the languages in which there is a significant body of literature. Mastery is here defined as a modest ability to write and speak in that language. This alternative may be granted only upon specific prior recommendation from the student's committee and approval of the Dean of the Graduate School.

The language requirement may be satisfied by successfully passing (1) the foreign language examinations, which are scheduled by the Department of Modern Languages three times a year, or (2) a comprehensive examination in one language when such a substitution has been approved in advance by the Dean of the Graduate School.

Qualifying Examination and Admission to Candidacy. The student must undertake the preliminary or qualifying examination at least seven months before the time when the degree is expected to be conferred, but not before the accomplishment of two full years of graduate work. A student must be registered for one hour or more in any semester in which he asks to appear for either a preliminary or final examination.

This examination is designed to help provide the committee adequate basis for determining whether the following requirements have been met:

1. The student has mastery of the subject matter of all fields in his program.
2. The student has adequate knowledge of the literature in these fields and demonstrates powers of bibliographical criticism.
3. The dissertation project is feasible and adequate.

The qualifying examination shall be both oral and written unless otherwise recommended by the student's committee and approved by the Graduate Council. The written part of the examination will cover each field of study included in the student's program and will be given over a period not exceeding two weeks. Credit for the qualifying examination is not transferable.

The committee which conducts the examination will report in writing the results of the examination and make recommendations regarding admission to candidacy of the student.

By permission of his committee and the Dean of the Graduate School, a student who has failed in his qualifying examination may be given one re-examination, but only after a period of at least six months has elapsed.

Limitation for Staff Members. Members of the resident staff of the Texas Agricultural and Mechanical College System above the rank of assistant professor, or its equivalent, will not be granted the degree of Doctor of Philosophy at this institution unless they have passed their qualifying examination before promotion above that rank. They may, however, enroll for graduate work.

Dissertation. The general field of research to be used for the dissertation should be agreed on by the student and his committee at their first meeting, as a basis for selecting the proper courses to support the proposed research.

As soon thereafter as the research project can be outlined in reasonable detail, the official forms for proposing the dissertation should be completed, approved at a meeting of the student's committee, and submitted to the Dean of the Graduate School for final approval. This should be done before commencement of collection of data and not later than the third semester of resident work beyond the Master's level.

The ability to perform independent research must be evidenced by the dissertation. While acceptance is based primarily on its scholarly merit, it must also exhibit creditable literary workmanship. The format of the dissertation shall be acceptable to the Graduate School. Suggestions on form may be obtained from the office of the Dean.

At any time following admission to candidacy but no later than thirty days before the final examination is to be given, the candidate must submit to the office of the Dean the original and two duplicate copies of the completed dissertation as approved by the student's entire committee. The Dean will appoint readers from the Graduate Faculty, one of whom will be from the Department of English, to review the dissertation. This group may make suggestions to the Dean for transmission to the committee. The student's committee will suggest whatever modifications it considers appropriate for inclusion in the final draft of the dissertation. When completed, three final copies must be submitted to the Dean. These must be approved before the final examination can be given.

In addition to the dissertation, the candidate must submit three copies of an abstract not exceeding 750 words in length. It will be published in a bound volume of abstracts of dissertations.

All successful candidates for the doctorate are required to pay to the Fiscal Office a dissertation abstract publication fee of \$12.00. This fund is used to publish bound volumes of abstracts of doctoral dissertations. A copy is sent to each person whose abstract is included in the volume.

Final Examination. The candidate for the degree of Doctor of Philosophy must pass a final examination not less than one week before the date of conferring the degree. The student's committee as finally constituted will conduct this examination. The candidate's completed dissertation will be available to this committee. While the final examination may cover the broad field of the candidate's training, it is presumed that the major portion of the time will be devoted to the dissertation and closely allied topics. The final examination will be open to all members of the Faculty. The committee will submit their recommendations to the Dean of the Graduate School regarding acceptability of the candidate for the degree of Doctor of Philosophy.

GRADUATION

Graduate degrees are conferred at the close of each regular semester or summer session. Commencement exercises, however, are held only in January and June.

During the semester or summer session in which his degree is conferred, a student must be officially registered in the College whether or not he enrolls in course work.

Candidates for advanced degrees who expect to complete their work at the end of a given semester must give separate written notice to both the Dean and the Registrar to that effect not later than 90 days prior to the end of the semester, or 30 days prior to the end of the summer term, in which the student expects to have his degree conferred.

Each candidate for a degree must attend the commencement exercises in appropriate academic regalia unless his petition to be excused is approved by the Dean of the Graduate School. The petition should be submitted at least 30 days prior to commencement.

PUBLICATION OF THESIS MATERIAL

Graduate students pursuing work leading to an advanced degree may publish material that may subsequently be used as a part of the thesis or dissertation in scientific journals, provided the Dean of the Graduate School is notified of this intention at the time the paper is submitted for publication. The complete title, the names of authors as they appear on the paper, and the name of the journal will be furnished the Dean of the Graduate School. Acknowledgement should be given in the publication that the work is for partial fulfillment of graduate degree requirements.

After publication, the student will advise the Dean of the Graduate School regarding the volume and page of the journal in which the paper was published. Students are urged to provide similar information on all scientific papers published during their graduate careers, even though the material is not intended for use as a part of the thesis or dissertation.

GRADUATE FELLOWSHIPS AND ASSISTANTSHIPS

Graduate teaching assistantships for nine months, which require one-half time service, are available to qualified students. The first-year compensation may range from \$1,500 up depending upon duties performed. After

the successful completion of two semesters of a graduate program, teaching assistants may receive \$1,650 or more for the nine-month period.

Graduate research assistantships are usually 12-month appointments from \$1,800 upward. Vacancies may be filled for shorter periods.

A maximum of 12 credit hours of academic work per semester and 4 hours per summer term is normally approved for graduate assistants.

Some adjustment in duties assigned and in the rate of pay may be made for nonresident students to aid in meeting the nonresident fee.

Many assistantships and fellowships, including some post-doctoral fellowships, are available through the Agricultural and Engineering Experiment Stations or from grants-in-aid administered by individual departments. Inquiries concerning these forms of assistance may be directed either to the Dean of the Graduate School or the head of the department in which the student plans to do his major work.

Graduate fellowships are grants permitting full-time study and research (16 hours maximum per semester and 6 hours per summer term). The amount of the stipend is variable depending upon the nature of the grant and the qualifications of the recipient.

Applications for all assistantships and fellowships, together with letters of recommendation, and other supporting information, should be filed with the Dean of the Graduate School on or before March 1 preceding the academic year for which awards are to be made.

Forms for making application for assistantships are available in the office of the Graduate School. Information regarding research assistantships and fellowships which are administered by departments may be obtained by writing directly to the head of the department concerned.

LIBRARY FACILITIES

The College Library. The air-conditioned Cushing Memorial Library Building, erected in 1930 at a cost of \$250,000, houses a main collection numbering over 300,000 volumes, including files of federal and state documents and bound periodicals. The library is a designated depository for federal documents on a selective basis. The periodical collection has been implemented greatly within the past few years through the acquisition of many scarce sets of foreign scientific journals and the addition of many new periodical subscriptions. The library receives currently over 2,700 periodicals and other serials as well as some fifty state and national newspapers. It is a complete depository for all Atomic Energy Commission technical reports.

The library has been developed chiefly along reference and technical lines, and a good general reading collection has been accumulated. The careful selection of new books keeps the collection abreast of modern thought. With the exception of certain books designated for reference, and periodicals, government documents, and books temporarily reserved by certain departments for required reading, all books are loaned for home use for a period of two weeks with the privilege of renewal for the same length of time, unless the book is requested meanwhile. A browsing room for pleasure reading and study is maintained on the third floor.

Many of the important reference works are shelved in the General Reference room, and these include the encyclopedias, dictionaries, indexing services, directories, handbooks, and other miscellaneous materials. A staff of reference librarians is on duty at all hours. Specialized reference materials in agriculture and engineering are shelved in the Science and Agricultural Reference Room.

The College Library is also the research library of the Texas Agricultural Experiment Station and the Texas Agricultural Extension Service. Books

and other materials are sent to agricultural extension agents throughout the State by mail.

During regular session the library is open for the following hours: Weekdays, 8 a.m. to 10 p.m.; Saturdays, 8 a.m. to 1 p.m.; Sundays, 2 p.m. to 10 p.m. Between terms and on holidays the library is open on weekdays from 8 a.m. to 5 p.m. and on Saturdays from 8 a.m. to 12 noon, but it is closed Sundays.

Graduate students and members of the faculty may go into the stacks, where carrells are provided for their convenience. Each graduate student must have an identification card showing that he is doing graduate work.

Branch Libraries: Branch libraries are maintained for the following schools or divisions:

School of Veterinary Medicine. This library is located at the east end of the first floor of the Veterinary Medicine Building and is open from 8 a.m. to 5 p.m. on weekdays; from 7:30 to 9:30 p.m. on Mondays, Wednesdays, Thursdays, and Fridays; and from 8 a.m. to 12 noon on Saturdays. It is primarily a reference library with over 6,000 volumes of books and periodicals in the fields covered by the curriculum in the School of Veterinary Medicine. The library subscribes to 250 American and foreign periodicals and receives pertinent publications from other colleges and experiment stations. Through an inter-library loan program, it has access to materials from all of the major medical libraries, thus opening to research workers an extensive coverage of the field of medical literature in all its phases.

Division of Architecture. This library, located on the fourth floor of the Academic Building, furnishes reading room space and offers reference service from 8 a.m. to 5 p.m. daily. It is closed Saturdays and Sundays. The collection, numbering over 3,500 volumes of carefully selected books and periodicals, provides materials in this specialized field for all students and faculty.

Division of Business Administration. Another branch of the College Library, this collection numbers over 2,000 volumes of books and periodicals in the many areas of business administration, such as accounting, insurance, marketing, business law, etc. Over 100 periodicals are currently received, and a file of annual reports of corporations is carefully maintained.

The library is located in the west end of the first floor of Francis Hall. It is open from 1 p.m. to 5 p.m. daily and is closed Saturdays and Sundays.

Other Libraries. Many departments maintain working collections of books and periodicals for use within the departments. Some of the collections are fairly large and well organized; others are small but very well chosen. Use of these libraries is restricted by the departments concerned.

The Texas Engineers' Library. By an act of the State Legislature in 1941, the Texas State Board of Registration for Professional Engineers was given authority to establish a library for the professional engineers of Texas. It was voted by the members of the State Board of Registration for Professional Engineers that this library be established at the A. and M. College of Texas. This library also serves the engineering students of this college.

Late in 1952 the Texas Engineers' Library moved into its new building, later to be named the Gibb Gilchrist Engineering Library Building. The building is well lighted and furnished with the most modern equipment. The stacks are open to the students and there are several tables where they may study in this area. There are nine enclosed carrells for the use of the Registered Professional Engineers, graduate students in engineering, and faculty members. On the first floor of the building is a well lighted reference room which contains the major indexes to technical periodical literature and other science reference works. A collection of abstracts and subject bibliographies is also being built up as part of the general plan to make it as strong a research library as possible. Also on the first floor of the building is a map

room which contains several hundred atlases and maps, chiefly in the fields of geology and petroleum. At present the library has approximately 47,000 books, periodicals, documents, and other library materials. Approximately 1,300 scientific and technical periodicals are received annually, many of which are foreign. It is a well balanced collection, but is especially strong in aeronautics, air conditioning, concrete, hydrology and sanitary engineering, petroleum, and welding.

The library is open from 8 a.m. to 5 p.m. on weekdays and on Saturdays from 8 a.m. to 12 noon.

REGISTRATION OF MOTOR VEHICLES

All students and employees who drive motor vehicles on the campus must have them registered in the Office of Campus Security, Ground Floor, YMCA Building, within 48 hours of the time they are brought on the campus.

Students are assigned parking areas according to their housing assignment. Cars must be parked in these designated areas during the regular classroom hours.

COLLEGE HEALTH SERVICES

The College Hospital, located in the north central area of the campus, has recently been remodeled to give more efficient service. Besides infirmary space for over 100 patients, the facilities include physiotherapy (diathermy, ultra-violet, infra-red, and whirlpool baths), laboratory, and X-ray departments. The medical staff includes specialists in the fields of medicine; surgery; ear, nose, and throat; urology; and mental hygiene. The facilities are equivalent to those found in better clinics and hospitals.

Students who have paid the medical fee may come to the College Hospital Clinic as often as necessary during clinic hours for consultation, diagnosis, and treatment of illnesses and injuries. Students needing hospital care may be admitted to the infirmary at any hour, as there is a staff of Registered Nurses on duty at all times. Routine medications, X-rays, laboratory tests, and ambulance service are furnished the patient without charge.

Sanitary work is carried on throughout the entire year. The water of the College is supplied from artesian wells, and milk and other dairy products used by the student body are supplied by the College dairies, which are among the most scientific and modern in the State. The College laboratories make bacteriological checks of the milk and water supplies.

All College buildings are located on the crest of a wide divide with sufficient slope in every direction to insure proper drainage. The three units of dormitories are modern and comfortable, located in spacious and beautifully landscaped areas on the campus. The dormitories, as well as the College swimming pool and other places frequented by the students, are inspected at regular intervals.

The College is particularly concerned with the maintenance of the health and physical development of its students. It provides one of the finest indoor swimming pools in the State, as well as tennis courts, athletic fields, and physical training and education.

RELIGIOUS ACTIVITIES

In addition to the College Y.M.C.A. staff, there are nine churches near the campus whose primary purpose is to serve the spiritual needs of the students. The campus religious leadership is deeply conscious that the students are in perhaps the most formative period of their lives and feel keenly the responsibility for their spiritual development.

The programs of the respective churches are aimed primarily to meet the student needs. Many of the churches have distinct student departments

with specialized leadership whose sole responsibility is that of ministering to the students. The pastors of the churches also give as much time as is necessary to the students for personal counseling.

The churches serving the campus have a program similar to that of the home church with an expanded young people's department and dominant emphasis upon student interests. In addition to the special student emphasis, they have the customary Sunday worship periods, church schools, and young people's organizations promoted to stimulate clear and constructive thinking in the important field of religion. The student departments are expanded to offer wholesome recreation and social life and social service.

One week during each year is designated officially by the College administration as Religious Emphasis Week, in which the entire College cooperates, making it possible to have an outstanding religious leader to address voluntary convocations of the students. The administration of the College, knowing the value of developing the spiritual aspects of the personality of the student, authorizes an adjustment of the College program so as to permit all students to attend.

The beautiful new Interfaith Chapel, a gift of the Former Students Association, is made of Austin limestone and glass, and is modern in design. Its landscaping, when completed, will add greatly to its beauty.

In addition to encouraging individual meditation and prayer and serving as a meeting place for small religious groups, the other activities foreseen include making available a library of religious books, a secluded meditation room, accommodations for small weddings, funerals, memorial services, baptisms, vesper services, and other religious rites. The Chapel is open at all hours for meditation and prayer.

THE MEMORIAL STUDENT CENTER

The Memorial Student Center, completed in 1950 and dedicated to the memory of those men of the Agricultural and Mechanical College of Texas who gave their lives during World Wars I and II, was erected to foster the social, cultural, and spiritual phases of student life. Facilities include a dining room, snack bar, gift shop, barber shop, 66 guest rooms, ballroom, lounges, and recreational facilities for games and crafts, as well as meeting rooms for clubs and conferences.

GRADUATE COURSES BY DEPARTMENTS

Figures in parentheses following the number of the course indicate the clock hours per week devoted to theory and practice respectively. Theory includes recitations and lectures; practice includes work done in the laboratory, shop, drawing room, or field. The unit of credit is the semester hour, which involves one hour of theory, or from two to four hours of practice per week for one semester of eighteen weeks.

Roman numerals to the right of the credit value of each course indicate the semester in which it is regularly offered. The letter "S" denotes summer offerings.

Any course may be withdrawn from the session offerings in case the number of registrations is too small to justify the offering of the course.

Department of Aeronautical Engineering

A. E. CRONK* (Head), B. B. HAMNER, R. L. LEUTZINGER

The Department of Aeronautical Engineering offers graduate work as preparation for research careers or as more complete training in the engineering practices of the aeronautical industry. Programs can be developed with emphasis on airplane design, high speed aerodynamics, aircraft structures, or strength of materials.

Wind tunnels provide equipment for aerodynamic research in fundamental fluid flow problems or in three-dimensional testing of complete airplane models. The College-owned Easterwood Airport is an excellent Class IV installation providing fine facilities for research in flight testing and aircraft operation.

The present trend of the aeronautical industry toward more research and development rather than heavy production has stimulated interest in graduate work in aeronautical engineering.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

417. Aircraft Propulsion Systems. (3-0). Credit 3. II.

A study of the development, fundamentals, theories, construction, design, and performance of turbo-jet, ram jet, pulse jet, and rocket power plants for aircraft. Prerequisites: Aeronautical Engineering 401; Mechanical Engineering 410. Mr. Leutzinger

418. Advanced Aerodynamics. (4-0). Credit 4. II

Theoretical and experimental aerodynamics for students majoring in aerodynamics. Theory of ideal fluid, viscous effects, compressible flow, and application to design problems. Prerequisites: Must have received at least a grade of B in Aeronautical Engineering 303 and Mathematics 307, or special permission. Mr. Cronk

421. Dynamics of Airplanes. (3-0). Credit 3. II

Linear theory of vibrations of single and multi-degree of freedom systems; self-excited vibrations. Applications of matrix algebra. Elementary theory of flutter; landing impact, gust response, aero-elastic effects, dynamic stability. Prerequisites: Aeronautical Engineering 401; Mathematics 307 or 308. Mr. Cronk

FOR GRADUATES

601. Principles of Fluid Motion. (4-0). Credit 4. I

Mathematical methods of analysis are emphasized. Perfect fluid theory development. Treatment of viscosity and boundary layer phenomena. Prerequisites: Aeronautical Engineering 303; Mathematics 307. Mr. Cronk

*Graduate Advisor

MEMORIAL STUDENT CENTER . . . offers excellent air conditioned facilities for social and recreational life.

603. Aerodynamics of the Airplane. (4-0). Credit 4. I

Application of vector analysis to two- and three-dimensional airfoil theory. Viscosity and compressibility. Drag of aircraft components. Static and dynamic stability criteria. Prerequisites: Aeronautical Engineering 303; Mathematics 307. Mr. Cronk

604. Dynamics of Compressible Fluids. (4-0). Credit 4. II

Properties of compressible fluids, dynamics of one-dimensional motion, channel flows, shock waves, methods of observation, extension to two- and three-dimensional flow, effects of viscosity. Prerequisites: Aeronautical Engineering 303 and Mathematics 307, or approval of Head of Department. Mr. Cronk

605. Aircraft Structural Analysis. (4-0). Credit 4. I

The classical methods of analysis derived from strain energy and their application to aircraft structural problems. Studies of stresses and strains in aircraft structural arrangements involving thin sheets, sandwich construction, and different materials. Special problems and studies attendant to aircraft column work. Prerequisite: Mathematics 307 or approval of Head of Department. Mr. Hamner

606. Aircraft Structural Design. (2-6). Credit 4. II

Major structural design requirements of high performance aircraft will be studied. New materials and fabrication methods will be considered (magnesium, metalite, material combinations, etc). Original designs will be undertaken by each student. Prerequisite: Aeronautical Engineering 605. Mr. Hamner

607. Aircraft Structural Testing. (1-3). Credit 2. I

Static and dynamic testing procedures for aircraft structural testing, instruments used, data taking, data analysis, reports. Prerequisites: Aeronautical Engineering 605; Mechanical Engineering 617. Mr. Hamner

608. Aircraft Flutter Analysis. (4-0). Credit 4. II

Theoretical development of the structural and aerodynamic equations for two- and three-dimensional aircraft flutter. Numerical solutions in practical problems to determine flutter velocities. Methods of testing to determine vibration characteristics of aircraft. Prerequisites: Aeronautical Engineering 421 or Mechanical Engineering 459 or 617; Mathematics 307. Mr. Leutzinger

685. Problems. Credit 1 to 4 each semester. I, II, S

Investigation of special topics not within the scope of thesis research and not covered by other formal courses. Prerequisite: Graduate classification in aeronautical engineering. Staff

691. Research. Credit 2 to 6 each semester. I, II

Technical research projects approved by the Head of the Department. Staff

Department of Agricultural Economics and Sociology

C. A. BONNEN, R. E. BRANSON, D. R. DAVIS, V. W. EDMONDSON, L. P. GABBARD,
R. J. HILDRETH, R. L. HUNT, J. A. KINCANNON, J. G. McNEELY, A. C. MAGEE,
C. A. MOORE, B. H. NELSON*, W. E. PAULSON, DANIEL RUSSELL, F. O. SARGENT,
R. L. SKRABANEK, H. B. SORENSEN, J. H. SOUTHERN, T. R. TIMM (Head), H. S.
WHITNEY*

The objective of the program in this field is the training of scientific and professional workers. Increasing attention of public agencies and private concerns to rural economic and social problems points to enlarged opportunities for qualified workers for teaching, research, public relations or administration, and private employment in these fields.

*Graduate Advisor

In planning a student's program, the need for broad training, rather than narrow specialization, is recognized. The student, irrespective of his primary interest, is expected at the outset to take not only advanced courses covering various fields within the Department but also essential supporting courses in other departments. In all cases he is expected to acquire a sound knowledge of economic or social theory, its history, and its application to contemporary agricultural problems; and the ability to employ statistical techniques and other sound methodology in making rural social and economic studies.

The teaching and research activities are grouped broadly as follows: in agricultural economics, under (1) farm management, (2) marketing, (3) land economics, and (4) prices, policies, and finance; and in rural sociology under (1) rural social problems, (2) rural organization, (3) social theory, and (4) rural social institutions. These fields are subdivided into several specific phases. The present and expanding program of research in the department affords the student wide choice and interested guidance in his research for a thesis or dissertation.

AGRICULTURAL ECONOMICS FOR GRADUATES AND ADVANCED UNDERGRADUATES

404. Agricultural Marketing. (3-0). Credit 3. S

A special three-week summer course for Extension Service personnel and other professional agricultural workers, reviewing basic economic principles used in marketing agricultural products, consisting of some of the more common marketing problems confronting Texas farmers and ranchers, and opportunities for and methods of using marketing principles and practices in educational work with farm people. Examples based on actual marketing problems. Not open for agricultural economics M.S. or Ph.D. majors. Prerequisites: Baccalaureate degree; experience in professional agricultural work. Mr. McNeely

413. Agricultural Cooperatives. (3-0). Credit 3. I

Place of cooperatives in our economic system; historical development and principles of cooperative associations. Steps in organizing an agricultural cooperative; operational aspects of cooperatives including legal considerations, financing, management, and membership relationship; and future role of cooperatives in American agriculture. Prerequisite: Agricultural Economics 314. Mr. Whitney

416. Economics of Livestock Marketing. (2-0). Credit 2. I

An economic analysis of the livestock and meat industry; marketing practices of livestock producers; characteristics of major agencies and services; and problems associated with the movement of livestock from producer to consumer. Prerequisite: Agricultural Economics 314. Mr. McNeely

429. Agricultural Policy. (3-0). Credit 3. II

An analysis of the causes, nature, and effects of government participation in agriculture. Emphasis is upon the interrelationship of American agriculture and the political and economic system, public administration and interest representation. Prerequisites: Economics 203 and 204, or 205. Mr. Timm

430. Agricultural Finance. (3-0). Credit 3, I, II

Analysis of the capital requirements for farming and ranching and how they are obtained; principles involved in the use of each type of credit necessary to sound financial management; the risk, costs, and legal aspects of credit; the security requirements, rates, and terms of the loans available from the private and governmental lending agencies serving agriculture. Prerequisites: Economics 203 and 204, or 205. Mr. Whitney

432. Farm and Ranch Organization and Operation. (2-2). Credit 3. I

Detailed problems involved in the organization and management of specific farms and ranches, covering such matters as efficiency analysis, budget preparation, layout, and improvement. Prerequisite: Agricultural Economics 325. Mr. Edmondson

443. Applied Farm Management. (2-2). Credit 3. S

A special three-week summer course for Extension Service personnel and other professional agricultural workers, reviewing basic economic principles used in farm management, the use of these principles in farm business planning, consideration of some of the more common management problems confronting Texas farmers, and opportunities for and methods of using the farm management approach in educational work with farm people. Laboratory work based on actual farms and ranches. Not open for agricultural economics M.S. or Ph.D. majors. Prerequisites: Baccalaureate degree; experience in professional agricultural work. Mr. Magee

452. International Trade and Agriculture. (3-0). Credit 3. II

World production and demand, present and potential, of agricultural commodities; world trade in farm products with emphasis on causal factors; national and international policies relating to agriculture; status of agricultural resources, technological progress in agriculture, and food requirements in major areas. The course is designed particularly for those interested in foreign agricultural service with governmental agencies or in export-import work with commercial concerns. Prerequisite: Senior classification. Mr. Hunt

FOR GRADUATES**601. Farmers Movements. (3-0). Credit 3. II**

History of efforts of farmers to solve their economic problems. Prerequisite: Approval of the Head of the Department. Mr. Hunt

602. Agricultural Marketing. (3-0). Credit 3, I, S

An analysis of the problems involved in the marketing of farm products. Prerequisite: Agricultural Economics 314. Mr. Hunt

603. Land Economics. (3-0). Credit 3. II

A study of selected problems of the allocation and utilization of natural resources with special reference to government organizations, quasi-government bodies, and other interest groups. Prerequisite: Agricultural Economics 422. Mr. Sargent

607. Research Methodology. (3-0). Credit 3. I

A study of the scientific approach, role of theory and assumptions, bias and prejudice, attributes of problems, methods and tools of agricultural economics, and rural sociology research. Each student is asked to critically evaluate research studies and is required to develop his thesis prospectus or its equivalent. Prerequisite: Approval of the Head of the Department. Mr. Moore

611. Production Economics. (3-0). Credit 3. II

Basic principles upon which problems in agricultural production and resource use can be analyzed. Fundamental principles of production are isolated and these principles applied to agricultural data. Emphasis is placed on the conditions under which efficiency is obtained. The problems of agricultural production and resource use are treated from the standpoint of the technical unit, the firm and society. Prerequisite: Approval of the Head of the Department. Mr. Hildreth

613. Contemporary Thought in Agricultural Economics. (3-0). Credit 3. I

A study of contemporary contributions to the thought and analyses of aggregate relationships and problems in the agricultural economy in terms of organizational efficiency and patterns in adjusting to economic development and economic fluctuations. Prerequisite: Approval of the Head of the Department. Mr. Moore

614. Agricultural Policy. (3-0). Credit 3. S

An analysis of public policies and programs affecting agriculture. Development of policies and programs for agriculture and their bases. Prerequisite: Agricultural Economics 429 or approval of the Head of the Department. Mr. Edmondson

617. Consumer Economics. (3-0). Credit 3. I

An analysis of the consumer market for agricultural products; effects of family characteristics, such as size, age, income, and location upon consumer preferences and buying habits; motivations of consumers in buying different products; effectiveness of quality variation, packaging, and displays upon consumer purchases; the place of advertising in market creation; price policies at the retail level; and market research as a guide to marketing policies. Prerequisite: Approval of the Head of the Department. Mr. Branson

619. Farm and Ranch Business. (2-2). Credit 3. I

An analysis of the interrelationships of factors affecting profits in farming and ranching. Identification of the strong and weak points in the organization and management of actual farm and ranch businesses. Special study and analysis of the management factor affords an opportunity to relate theory and practice in farming and ranching. Prerequisite: Approval of the Head of the Department. Mr. Edmondson

620. Agricultural Finance. (3-0). Credit 3. S

Scope of agricultural finance and problems of financing agriculture. Role of credit in agriculture; costs of credit; bases used in extending credit to agricultural producers; payment methods, and legal aspects of agricultural credit. Methods of protecting farm and ranch capital; analysis of agricultural loans; and analysis of private and public agricultural credit agencies. Prerequisite: Agricultural Economics 430 or approval of the Head of the Department. Mr. Whitney

627. Agricultural Price Analysis. (3-0). Credit 3. S

Agricultural prices viewed in the light of current economic theory; the application of economic theory to an analysis of agricultural product price determination and price behavior; economic theory as a tool in designing and evaluating governmental price programs for agriculture; consideration of various types of applied economic and statistical research for price analysis and price forecasting. Prerequisites: Agricultural Economics 324; Business Administration 303. Mr. Kincannon

641. Agricultural Statistics. (2-2). Credit 3. II

Planning the statistical research project, developing forms, selecting the sample, conducting the study, tabulating, analyses, and interpreting the data. Prerequisites: Business Administration 303 or Genetics 406 or equivalent; 15 hours of social science; approval of the Head of the Department. Mr. Kincannon

681. Seminar. (1-0). Credit 1 each semester. I

A review of current literature, preparation of papers on selected topics, and discussions with visiting agricultural economists. Prerequisite: Graduate classification. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

A directed individual study of a selected problem in the field of agricultural economics. Prerequisite: Approval of the Head of the Department. Staff

691. Research. Credit 1 or more each semester. I, II, S

Initiation and completion of a research project of approved scope for an advanced degree. Prerequisite: Approval of the Head of the Department. Staff

RURAL SOCIOLOGY

FOR GRADUATES AND ADVANCED UNDERGRADUATES

306. Principles of Social Work. (3-0). Credit 3. I, S

The historic development and present organization of private and public welfare agencies and social services. Distinctive techniques of the social work profession in interviewing, group work, case work, and social work organization are emphasized. Students are prepared to assume intelligent leadership on committees and boards of welfare agencies and to explore the possibilities for professional employment in this 20 billion dollar enterprise. Twelve hours of independent field work must be performed if graduate credit is allowed. Prerequisite: Rural Sociology 205 or 6 additional hours of rural sociology or other social science. Mr. Davis

311. Social Psychology. (3-0). Credit 3. I

An analysis of why people behave the way they do. The effect of social experiences and of the groups people belong to upon the development of personality. How to influence and control the behavior of people. Social adjustment and maladjustment including analysis of causes. Public opinion. Prerequisite: Psychology 207 or Rural Sociology 205. Mr. Nelson

404. Rural Community Development. (3-0). Credit 3. I

The objective of the course is to help future agricultural workers in doing a better job in their various specialties by recognizing and understanding group processes and organization in carrying on their program. The techniques of rural community development are explored as values to total agricultural and small town development. Community development problems in underdeveloped countries will be surveyed. Prerequisite: Approval of the Head of the Department. Mr. Russell

418. Public Opinion and Social Control. (3-0). Credit 3. I

Analysis of processes, planned or unplanned, by which individuals are taught, persuaded, or compelled to conform to usages and life values of groups. Nature and use of public opinion and propaganda. Prerequisite: Rural Sociology 205. Mr. Nelson

FOR GRADUATES

601. Rural Social Problem Analysis. (4-0). Credit 4. I, S

Recognition of the social causation of social problems in rural, urban and rural areas and the development of a scientific attitude for problem analysis. The specific relation of events to cultural context in which they had their birth is emphasized. Students are familiarized with the common tools that are used in collecting data for problem analysis and the steps in collecting, organizing, and analyzing data regarding social situations that violate the system of social values. Prerequisites: Rural Sociology 205 or its equivalent or 12 hours of social science*. Mr. Davis

602. Rural Social Theory. (4-0). Credit 4. II

The rise, spread, and development of the field of rural sociology in each of its three central phases—teaching, research, and extension. An objective appraisal of the scientific status of rural sociology and its interrelationships with other sciences. A review of the theories and contributions of past and present-day leading sociologists and other social scientists to the field of rural sociology. Prerequisite: Rural Sociology 205 or its equivalent, or 12 hours of social science*. Mr. Skrabanek

606. Rural Youth Leadership. (4-0). Credit 4. I, S

To give special insight into the problems of our youth and training techniques and programs needed to deal with these problems. To acquaint the advanced student with qualities, traits, techniques, attitudes, etc. of successful leaders in various fields. Prerequisite: Twelve hours of social science*. Mr. Russell

*For this purpose social science is defined to include only courses in agricultural economics, anthropology, economics, political science, psychology, and sociology.

611. History of Social Thought. (4-0). Credit 4. II

The development of social thought from ancient times to the present. Chief emphasis is placed upon sociological thinkers who have made significant contributions to the field, the theories of these men, and the background from which these theories evolved. Prerequisites: Rural Sociology 205; 12 additional hours of social science*. Mr. Nelson

612. The Rural Community. (4-0). Credit 4. II

The purpose of this course is to acquaint the advanced student with the importance, problems, processes, and techniques of community development. Each student will be given an outside reading and study program to meet his particular interest and needs in his chosen field or specialty. A major purpose is to recognize the community development self-help technique as an effective method of improving rural standards of living in agriculture, health, education, recreation, beautification, etc. Prerequisite: Twelve hours of social science*. Mr. Russell

618. Educational Sociology. (3-0). Credit 3. S

How our school system can strengthen our democratic way of life. The relationship of education to social organization, social change, and social control. Sociological analysis of the role of education in our society. Prerequisites: Rural Sociology 205 or the equivalent; 9 additional hours of social science or a degree in education. Mr. Nelson

685. Problems. Credit 1 to 4 each semester. I, II, S

A directed individual study of a selected problem in the field of rural sociology. Prerequisite: Six hours of rural sociology or 12 hours of supporting social science. Staff

691. Research. Credit 1 or more each semester. I, II, S

Initiation and completion of a research project of approved scope for an advanced degree. Prerequisite: Approval of the instructor. Staff

Department of Agricultural Education

J. D. GRAY, O. M. HOLT, J. R. JACKSON, E. H. KNEBEL, HENRY ROSS***,
E. V. WALTON (Head)**

Advanced courses in agricultural education provide an opportunity for teachers of vocational agriculture to improve their efficiency as instructors. Course content and teaching procedures used in graduate courses are selected to assist in the development of skill in recognizing and analyzing professional problems and setting up plans of action for the solution of these problems.

Candidates for advanced degrees in agricultural education should have at least one year of successful professional experience. However, evidence of maturity, purposefulness, and scholastic ability may be considered in lieu of experience upon approval by the Agricultural Education staff.

The staff of the Department of Agricultural Education maintains close and continuous contact with teachers in the field by visiting local departments of vocational agriculture, by attending meetings of teachers, and by conducting classes of instruction by extension. This intimate and continuous contact enables the staff to conduct its graduate program with understanding and appreciation of the relative importance of the many problems and difficulties that teachers are constantly having to meet and solve.

*For this purpose social science is defined to include only courses in agricultural economics, anthropology, economics political science, psychology, and sociology.

*Graduate Advisor

**On leave of absence

FOR GRADUATES AND ADVANCED UNDERGRADUATES

425. Course Building. (2-0). Credit 2. II

Preparing units of instruction in vocational agriculture for all-day, part-time, and evening school classes. Staff

426. Methods in Adult Agricultural Education. (2-0). Credit 2. I

Planning educational programs and activities for adult farm people in young farmer and adult classes. Developing skill in the use of the group process in teaching. Staff

427. Methods of Developing Farming Programs. (1-2). Credit 2. I

Planning and supervising farm programs of vocational agriculture students. Staff

FOR GRADUATES

One year of acceptable experience (see second paragraph above) and Agricultural Education 425, 426, 431, 432 or their equivalents are prerequisites to the following courses:

601. Advanced Methods in Agricultural Education. (3-0). Credit 3. I, S

An advanced course in methods of teaching vocational agriculture. Staff

605. Supervised Farming. (3-0). Credit 3. I, S

Advanced study of supervised farming in vocational agriculture and methods of supervising students in carrying out supervised farming programs. Staff

607. Future Farmer and Young Farmer Activities. (3-0). Credit 3. II, S

Methods of conducting Future Farmer and young farmer activities. Staff

610. Adult Education in Agriculture. (3-0). Credit 3. II, S

Methods of organizing and conducting adult education programs in vocational agriculture on a participation basis. Supervision of practice work, determining course content, follow-up work, setting up publicity programs, and evaluating improved practices resulting from evening school instruction. Staff

613. Administration and Supervision of Agricultural Education. (3-0). Credit 3. II, S

Problems of organization, administration, financing, and supervision of vocational agriculture, and extension work. Staff

615. Philosophy of Agricultural Education. (3-0). Credit 3. S

A study of the philosophy and evaluation of agricultural education. Emphasis on the development and use of evaluative criteria and tests in the field of vocational education in agriculture. Staff

616. Program Building in Agricultural Education. (3-0). Credit 3. I, II, S

Organization of programs in agricultural education on local, state, and national basis. Securing assistance of public school administrators, farmers, and county, state, and national agricultural agencies in program building. Staff

619. Workshop in Agricultural Education. (1-6). Credit 3. S

Students select two problem areas for study in the field of vocational agriculture. Committees are set up to utilize consultants in specialized areas of study. Reports are required. Prerequisite: Teaching vocational agriculture or approval of Head of Department. Staff

630. Guidance and Counseling for Rural Youth. (3-0). Credit 3. S

Analysis of occupational and vocational opportunities for rural youth, techniques of individual group counseling and guidance. Practicum in personality and occupational interest testing. Prerequisite: Approval of the Head of the Department. Mr. Walton

685. Problems. Credit 2 to 4 each semester. I, II, S

Studies related to classroom, laboratory, supervised farming, and adult education activities. For Master of Education programs only. Staff

691. Research. Credit 1 or more each semester. I, II, S

Research for thesis for Master of Science programs only. Staff

Department of Agricultural Engineering

PRICE HOBGOOD, F. R. JONES* (Head), O. R. KUNZE, H. P. SMITH,
J. W. SORENSON, L. H. WILKES

Agricultural engineering is a relatively new subject. As the name implies, it involves both agriculture and engineering, but more specifically refers to the application of basic engineering principles and practices to agricultural production and related processes. The growing need for an expanded and maximum agricultural production consistent with the greatest possible economy and efficiency has created numerous problems of an engineering nature. Some of these include the design of new mechanical devices for the cultivation, harvesting and storage of specific crops; the development of effective and efficient methods for the control of rainfall and water under various crop, soil, and climatic conditions; the creation of new applications for the utilization of electricity and other developments which will provide better farm living conditions and standards.

This expansion in the field of agricultural engineering has created an increasing need for individuals having a thorough training in the basic science subjects, in certain basic and applied agricultural and engineering subjects, and in such humanistic subjects as English, history, and economics. A four-year course of study is seldom adequate to provide this broad training for the agricultural engineer, particularly if he plans to enter certain educational, research, or scientific fields of employment. For this reason, the Agricultural Engineering Department is able to offer advanced courses in various phases of the subject, including power and machinery, farm structures, land reclamation, drainage and irrigation, and rural electrification, whereby the student may obtain a more complete and thorough knowledge and training in any specific phase of agricultural engineering. A modern building and up-to-date equipment are available for graduate study in various fields.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

410. Irrigation and Drainage Engineering. (2-3). Credit 3. II

Principles of farm drainage as applied to open ditches and tile drains; drainage districts and laws; land clearing and reclamation methods. Principles of irrigation practice; sources of water supply; distribution systems; application of water to crops; measurement and duty of water; alkali control. Prerequisites: Civil Engineering 201, 311. Mr. Hohn

413. Farm Structures Design. (2-3). Credit 3. II

Structural problems in farm building design. Functional planning of farm buildings with respect to economy, convenience, sanitation, and appearance. Prerequisites: Agricultural Engineering 205; Civil Engineering 305. Staff

*Graduate Advisor

418. Agricultural Process Engineering. (2-3). Credit 3. I

Engineering principles and their application to product drying and storage, materials handling, flow rate measurements, conditioning air, instrumentation, fans, sorting and size reduction. Mr. Kunze

425. Seminar. (1-0). Credit 1. I

A review of current literature dealing with agricultural engineering problems presented by staff members and students. Prerequisite: Senior classification. Mr. Jones

426. Seminar. (1-0). Credit 1. II

Presentation of papers dealing with new developments and results of investigations of problems related to agricultural engineering. Prerequisite: Senior classification. Mr. Jones

428. Soil and Water Conservation Engineering. (2-3). Credit 3. I

Principles of engineering practice as applied to soil and water conservation, including runoff, terrace and terrace outlet design and construction; proper cultural and tillage practices and related topics. Prerequisites: Civil Engineering 201, 311 or registration therein. Mr. Hohn

430. Farm Electrification Engineering. (2-3). Credit 3. II

Economic application and utilization of electric power on farms and in rural communities. Prerequisite: Agricultural Engineering 418. Mr. Kunze

440. Farm Electrification. (3-0). Credit 3. S

This course includes the fundamentals of farm wiring and lighting and the design, construction, and operation of electric water systems, refrigeration equipment, brooders, milking machines, feed processing and handling equipment, hay and grain driers, and other electric equipment used in farm production. This is a special course for teachers and prospective teachers in vocational agriculture to be offered for a three-week period during the summer. Mr. Kunze

FOR GRADUATES**601, 602. Drainage and Irrigation. (3-3). Credit 4 each semester. I, II**

Advanced study of farm drainage and irrigation with special emphasis on recent developments. Prerequisite: Agricultural Engineering 410. Mr. Jones

603, 604. Mechanical Farm Equipment. (3-3). Credit 4 each semester. I, II

Advanced study of farm machinery and equipment with special emphasis on recent developments. Prerequisite: Agricultural Engineering 208. Mr. Jones

605, 606. Farm Structures. (2-6). Credit 4 each semester. I, II

Advanced study of farm buildings and farm home utilities. Prerequisites: Agricultural Engineering 205, 413, 418. Mr. Kunze

609, 610. Farm Power. (2-6). Credit 4 each semester. I, II

Advanced study of farm power with special emphasis on recent developments. Prerequisite: Agricultural Engineering 324. Mr. Jones

613, 614. Soil and Water Conservation Engineering. (3-3). Credit 4 each semester. I, II

The advanced study of the design and construction of terraces, outlet channels, and other structures used for soil and water conservation, with special emphasis on late developments. Prerequisite: Agricultural Engineering 428. Mr. Jones

685. Problems. Credit 1 to 4 each semester. I, II

Advanced laboratory or field problems not related to student's thesis. Prerequisite: Graduate classification. Staff

691. Research. Credit 1 or more each semester. I, II

Research for the thesis or dissertation. Staff

Department of Agronomy

See also PLANT BREEDING

I. M. ATKINS, E. C. BASHAW, H. M. BEACHELL, M. E. BLOODWORTH, M. S. BROWN, A. G. CALDWELL, E. D. COOK, J. E. ENDRIZZI, M. H. FERGUSON, J. F. FUDGE, C. L. GODFREY, M. A. GRIMES, H. E. HAMPTON*, E. C. HOLT, M. L. KINMAN, G. W. KUNZE, C. F. LEWIS, P. J. LYERLY, T. E. McAFEE, J. F. MILLS, J. B. PAGE, R. C. POTTS, J. R. QUINBY, R. G. REEVES, T. R. RICHMOND, J. S. ROGERS (Head), R. D. STATEN, I. P. TROTTER, A. C. WAMBLE, R. M. WEIHING

In cooperation with other departments, thorough training is given in sciences involved in an understanding of soil and plant interrelations necessary for research in the improvement and management of field crops and soils, soil chemistry, and soil physics. The facilities and staffs of the units of the Texas A. and M. College System within the fields of agronomy offer unusual opportunities for training and research, both fundamental and applied, under a wide range of soil and climatic conditions. Particular emphasis is placed on cotton, corn, rice, oats, wheat, barley, grain sorghums, and forage crops.

The Beasley Laboratory for cotton improvement research serves all of the cotton states, the Agricultural and Mechanical College of Texas having been designated as headquarters for the regional program. Cotton species, genetic stocks, and hybrids are available not only within the Department but to all cotton research workers.

Applied research in these various areas usually leads to the M.S. degree. Research programs for the Ph.D. degree are expected to be basic in approach.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

413. Soil and Crop Management. (3-0). Credit 3. II

A study of the special problems in the utilization and management of soils and crops under varying soil and climatic conditions. Independent work in solving current agronomic problems in different parts of the Southwest required. Prerequisites: Agronomy 301; senior classification. Mr. Hampton

417. Pasture Management. (2-2). Credit 3. I, II

Adaptation and management of native and introduced pasture plants; their establishment, production, utilization, and maintenance in permanent and temporary pastures. Field trips are required. Prerequisites: Agronomy 301, and either Agronomy 308 or Range and Forestry 303. Mr. Potts

422. Soil Fertility. (3-4). Credit 4. I, S

An advanced course dealing with the more technical consideration of the physical, chemical, and biological factors influencing the crop producing power of the soil. Prerequisites: Agronomy 301; Chemistry 223, 231; Plant Physiology and Pathology 313. Mr. Hampton

445. Soil Physics. (2-3). Credit 3. I

A study of the fundamentals of soil physics and their application to the solution of problems in crop production, irrigation, and engineering. Prerequisites: Nine hours of soils and physics, with a minimum of 3 hours of each (may include soil mechanics). Mr. Bloodworth

FOR GRADUATES

601. Advanced Cereal Crops. (3-4). Credit 4. II

An advanced study of cereal production and breeding, including a critical review of world literature reporting recent investigations in this field. Mr. Trotter

602. Advanced Forage Crops. (3-4). Credit 4. I

An advanced study of forage production and breeding, including a critical review of world literature reporting recent investigations in this field. Mr. Trotter

*Graduate Advisor

605. Pedology. (3-0). Credit 3. I

An advanced study of the development, morphology, constitution, and classification of soils. Mr. Godfrey

617. Advanced Soil Physics. (3-3). Credit 4. II

The physical constitution and properties of soil, including consistence and structure, aeration, soil water, and thermal relationships. Prerequisites: Agronomy 445 or the equivalent and a two-semester course in physics. (Offered in 1958-59 and in alternate years thereafter) Mr. Page

618. Advanced Soil Analysis. (2-3). Credit 3. I

A course designed to familiarize the student with the more difficult problems of soil analysis and the interpretation of the data. Prerequisite: Agronomy 422. (Offered in 1959-60 and in alternate years thereafter) Mr. Kunze

624. Physical Chemistry of Soils. (3-3). Credit 4. I

The physical chemistry of the clay mineral and the inorganic and organic soil colloids. Prerequisites: Agronomy 617, 618; Chemistry 323, 324. (Offered in 1958-59 and in alternate years thereafter) Mr. Page

626. Soil Mineralogy. (3-3). Credit 4. I

A study of the crystal structures and properties of the more important agricultural and industrial clays combined with identification techniques involving X-rays, differential thermal analysis, and electron microscopy. (Offered in 1959-60 and in alternate years thereafter) Mr. Kunze

681. Seminar. (1-0). Credit 1 each semester. I, II

A seminar for graduate students and staff members in soils and crops. Presentation and discussion of special topics and research data in the field of agronomy. Participation is required of all graduate students in agronomy. Staff

685. Problems. Credit 1 or 2 each semester. I, II, S

Advanced problems in some phase of agronomy not directly related to the thesis or dissertation. Staff

691. Research. Credit 1 or more each semester. I, II, S

Investigations leading to the thesis or dissertation. Staff

Animal Breeding

A major in animal breeding may be undertaken including appropriate courses in genetics and in animal husbandry, dairy science, or poultry science.

Department Of Animal Husbandry

See also **Animal Breeding, Animal Nutrition, and Physiology of Reproduction.**

R. O. BERRY, O. D. BUTLER (Head), T. C. CARTWRIGHT, F. I. DAHLBERG, FRED HALE, H. O. KUNKEL, J. C. MILLER, R. E. PATTERSON, J. K. FIGGS, R. R. SHRODE, R. W. SNYDER, A. M. SORENSEN, JR., T. D. WATKINS, JR.

Graduate work in animal husbandry is designed to prepare the student for work in the fields of research, extension, teaching, and production. The student will have the opportunity to broaden his knowledge in special phases of livestock production. Herds and flocks of the principal types and breeds of livestock are maintained for use in carrying through the program of teaching and research. A modern meats laboratory and frozen foods locker plant are an integral part of the Department's training equipment. In addition to a wool technology laboratory, a small wool scouring plant of the commercial type is operated by the Department and is available for training and research

purposes. Provisions are made for close cooperation with other closely related departments, such as Agricultural Economics and Sociology, Biochemistry and Nutrition, Genetics, and Veterinary Parasitology. Special equipment is provided for comparative feeding trials with the different species of farm animals, including pens for individual feeding. Laboratory facilities are available for physiology of reproduction. Each graduate student is required to write his thesis in a form acceptable for publication in a journal or bulletin. This will be in addition to his regularly submitted thesis manuscript.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

406. Beef Cattle Production. (2-2). Credit 3. I, II, S

Systems of production; establishing a breeding herd; mating and reproduction; performance and progeny records for selecting breeding stock; feeding and managing the breeding herd; systems of managing stockers and feeders; fattening cattle for market, farm steer beef production and commercial feedlot finishing; planning commercial and purebred cattle enterprises; fitting and showing; animal health; marketing. Prerequisite: Animal Husbandry 303. Mr. Berry

410. Sheep and Angora Goat Production. (2-2). Credit 3. II

Methods of management; selection and culling; environmental factors affecting kid and lamb production; care and feeding of lambs, kids, and breeding flock; marketing of products from sheep and goats; diseases; wool and mohair grades and classification; methods of improving the clip. Prerequisite: Animal Husbandry 303. Mr. Watkins

412. Swine Production. (2-2). Credit 3. I

Historical; feeding and handling the breeding herd during various seasons; culling; records; the sow and the litter; growing and fattening pigs; forage crops; feeding on forage; dry lot feeding; choice and value of feeds; garbage disposal plants; prevention of disease; the purebred herd; fitting and showing. Prerequisite: Animal Husbandry 303. Mr. Hale

413. Horse Production. (2-2.) Credit 3. II

Breeding, feeding, management and training of quarter and pleasure horses; growing and developing foals; anatomy; unsoundness; parasites and diseases; stables and equipment; shoeing; fitting for show and sale. Prerequisite: Animal Husbandry 303. Mr. Dahlberg

418. Wool and Mohair Technology. (2-2). Credit 3. I

Grades and classification of wool and mohair; physical and chemical properties; marketing; marketing reports; fiber flow through processing; wool and mohair judging and appraisal. Prerequisite: Junior classification or approval of Head of Department. Mr. Watkins

433. Reproduction in Farm Animals. (2-2). Credit 3. I, II

Anatomy and physiology of the male and female reproductive tracts; hormones governing reproduction; pregnancy tests; estrus and the estrous cycle; ovulation; mating; gestation; parturition; lactation; sperm physiology; collection, storage, and dilution of semen; artificial insemination; factors affecting fertility; causes of sterility in males and females. Prerequisite: Senior classification or approval of Head of Department. Mr. Berry

436. Advanced Livestock Management. Credit 3. S

A special three-week workshop course for teachers of vocational agriculture to be offered during the summer. This course includes problems in all phases of animal production selected by the group under the supervision of the instructor. Mr. Dahlberg

444. Large Animal Nutrition. (3-0). Credit 3. II

Review of elementary chemistry of carbohydrates, proteins, and fats, with particular emphasis on the role of these constituents in large animal nutrition. A comparison of the nutrition of the ruminant to that of the monogastric animal. A study of the secretions (enzymatic and hormonal) of large animals and the function of each. The efficiency of each class of animals with regard to converting feed into fats, meat, wool, and work. Prerequisite: Animal Husbandry 303, or approval of Head of Department. Mr. Kunkel

FOR GRADUATES**605, 606. Advancements in Beef Cattle Production. (3-0). Credit 3 each semester. I, II**

A comprehensive review of recent advances in research relative to the various phases of beef cattle production; the application of the basic principles of nutrition, animal breeding, and disease control to the feeding, breeding, and management of beef cattle. Prerequisites: Animal Husbandry 406; Genetics 306; or approval of Head of Department. Mr. Riggs

619, 620. Advancements in Sheep and Angora Goat Production. (3-0). Credit 3 each semester. I, II

A comprehensive review of recent advances in research relative to the various phases of sheep and angora goat production; the application of the basic principles of nutrition, animal breeding, and disease control to the feeding, breeding and management of sheep and angora goats. Prerequisites: Animal Husbandry 410; Genetics 306; or approval of Head of Department. Mr. Watkins

621, 622. Advancements in Swine Production. (3-0). Credit 3 each semester. I, II

A comprehensive review of recent advances in research relating to the various phases of swine production; the application of the basic principles of nutrition, animal breeding, and disease control to the feeding, breeding and management of hogs; fitting swine production to the whole farm enterprise; special problems relating to the planning and operation of swine production units. Prerequisites: Animal Husbandry 412; Genetics 306; or approval of Head of Department. Mr. Hale

631. Physiology of Reproduction. (2-0). Credit 2. II

A critique of scientific literature concerning the processes of reproduction in farm mammals. Students will compile, evaluate, and summarize the literature on various phases of this subject. Consideration will be given to special problems on which further investigations are desirable and methods of outlining research projects for them. Prerequisite: Animal Husbandry 433. Mr. Berry

681. Seminar. (1-0). Credit 1 each semester. I, II

Important current developments in the field of animal husbandry. Review of current literature and presentation of papers on selected animal husbandry topics. Prerequisites: Graduate classification; major in animal husbandry or genetics. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

Advanced studies in animal husbandry problems and procedures. Problems assigned according to the experience, interest, and needs of the individual student. Registration by approval of Head of Department. Prerequisite: Graduate classification. Staff

691. Research. Credit 1 or more each semester. I, II, S

Investigations leading to the student's thesis or dissertation in the fields of animal production, meats, wool and mohair, nutrition, inheritance of farm animals, and physiology of reproduction. Prerequisite: Graduate classification. Staff

Animal Nutrition

A major in animal nutrition may be undertaken including appropriate courses in biochemistry and nutrition and in animal husbandry, dairy science, or poultry science.

Animal Parasitology

S. O. BROWN, J. C. GAINES*, E. H. GIBBONS, R. L. HANNA, S. H. HOPKINS*,
M. A. PRICE, R. D. TURK*

A major in animal parasitology may be undertaken including appropriate courses in biology, entomology, and veterinary parasitology.

Graduate instruction in parasitology is composed primarily of a detailed study of the more important parasites attacking man and domestic animals including identification, relation to diseases, biological developments, control and other special problems concerned with these parasites. Most of the more important ectoparasites of animals are insects and many of the endoparasites are dependent upon insects as vectors. Graduate instruction in this field is accomplished by closely correlating the graduate work offered in the respective Departments of Biology, Entomology and Veterinary Parasitology. This arrangement makes available to the student the combined facilities of these departments. This combined course of study is intended primarily for the student working toward a Ph.D. degree.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

Biology 433. General Physiology. (3-3). Credit 4. I

Fundamental physiology of protoplasm; basic processes and functions of organs and systems. Emphasis is placed on digestion, respiration, metabolism, excretion, muscular contraction, and reproduction. Prerequisites: Biology 107 and either graduate classification, Biology 218, or the equivalent. Mr. Brown

Biology 435. Advanced Invertebrate Zoology. (3-3). Credit 4. I

Morphology, taxonomy, biology, and phylogeny of invertebrate animals. Prerequisite: Biology 107 or 108. Mr. Hopkins

Biology 436. Animal Parasitology. (3-3). Credit 4. II

Study of parasitic worms and protozoa; laboratory methods in parasitology. Prerequisite: Biology 435 or equivalent. Mr. Hopkins

FOR GRADUATES

Biology 627. Helminthology. (3-3). Credit 4. I

A study of the parasitic worms, especially Trematoda, Cestoda, Nematoda, and Acanthocephala. Prerequisite: Biology 436. (Offered in 1958-59 and in alternate years thereafter.) Mr. Hopkins

Biology 630. Protozoology. (3-3). Credit 4. II

Morphology, taxonomy, physiology, reproduction, phylogeny, ecology, and life history of both free living and parasitic protozoa. May be taken concurrently with parasitology. Prerequisite: Biology 108. (Offered in 1959-60 and in alternate years thereafter.) Mr. Hopkins

Entomology 613, 614. Morphology. (3-3). Credit 4 each semester. I, II

A detailed study of anatomical structures of insects. Prerequisite: Entomology 305. Mr. Martin

*Graduate Advisor

Entomology 615. Insect Physiology. (3-3). Credit 4. I

A study of the physiology of respiration, circulation, digestion, and excretion; the mechanical and chemical senses of insects considered. Prerequisite: Entomology 306 or equivalent. Mr. Hanna

Entomology 617, 618. Medical Entomology. (3-3). Credit 4 each semester. I, II

The taxonomy and biology of parasitic insects, ticks, mites and their role in the causation and transmission of diseases affecting man and domestic animals. Prerequisites: Entomology 208 or equivalent. Mr. Price

Entomology 619. Insect Toxicology. (3-3). Credit 4. II

Chemical compounds which possess toxic properties; actions of poisons on insects; evaluation of insecticides in the laboratory and field; and mathematical analysis of data. Prerequisite: Entomology 615. Mr. Hanna

Entomology 691. Research. Credit 1 or more each semester. I, II, S

Research problems on taxonomy, life histories, biological control, ecology, physiology, or toxicology of insecticides. Prerequisite: Graduate classification. Staff

Veterinary Parasitology 601. Parasitology. Credit 1 to 4 each semester. I

A detailed study of the more important helminth parasites of domestic animals, including their identification, distribution, and life history. Prerequisite: Veterinary Parasitology 586 or the equivalent. Mr. Turk

Veterinary Parasitology 691. Research. Credit 1 or more each semester. I, II, S

Research for thesis. Mr. Turk

Division Of Architecture

T. R. HOLLEMAN (Acting Head), M. M. ROTSCH

Graduate study in architecture is essentially a matter of individual effort. For this reason, the graduate program of the Department is sufficiently broad in scope to encourage individual research in design and construction. No sharp distinction is made between the two, the one being as important as the other in any comprehensive program. The work is so arranged as to enable the student to devote large units of his time to research and design and to the problems of construction and professional practice.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

501. Architecture V. (0-15). Credit 5. I

Advanced design; major projects in community and regional planning. Prerequisite: Architecture 402. Staff

502. Design V. (0-15.) Credit 5. II

Advanced design; major projects in the design of buildings and groups of buildings. Prerequisite: Architecture 501. Staff

527. Structural Systems. (2-3). Credit 3. I

Advanced studies in the systems of architectural construction. Prerequisite: Architecture 428. Staff

528. Structural Systems. (2-3). Credit 3. II

Individual problems in the systems of architectural construction; materials and methods of construction; preliminary surveys of costs. Prerequisite: Architecture 527. Staff

554. Professional Practice. (2-0). Credit 2. I, II

Office practice; professional relations and ethics; building law; contracts. Prerequisite: Senior classification. Mr. Holleman

556. City Planning. (2-3). Credit 3. II

Survey of planning principles and procedures; legal aspects; physical and social development of the city; housing. Prerequisite: Senior classification. Mr. Rotsch

FOR GRADUATES**629, 630. History and Archaeology. (2-0). Credit 2 each semester. I, II**

Individual problems of study and research in the field of American architecture and archaeology. Mr. Rotsch

681. Seminar. (1-0). Credit 1 each semester. I, II, S

Review of current work in architecture; original presentations on selected topics. Mr. Holleman, Mr. Rotsch

685. Problems. Credit 1 to 4. I, II, S

Individual problems involving the application of theory and practice in the design and construction of buildings and groups of buildings. Mr. Holleman, Mr. Rotsch

691. Research. Credit 2 to 4 each semester. I, II, S

Research for thesis. Mr. Holleman, Mr. Rotsch

Department Of Biochemistry And Nutrition

See also Animal Nutrition.

B. J. CAMP, J. R. COUCH, H. E. JOHAM, H. O. KUNKEL, J. L. LIVERMAN, C. M. LYMAN* (Head), J. M. PRESCOTT, RAYMOND REISER, L. R. RICHARDSON, U. G. WHITEHOUSE

Facilities and equipment are available for advanced instruction in various phases of biochemistry and nutrition. There is an adequate stock of the usual equipment necessary for metabolic, nutritional, and chemical work. The Department has adequate facilities for the use of radioactive isotopes as tracers for following specific chemical reactions in plant and animal tissues. Other special equipment includes an ultracentrifuge, Tiselius electrophoresis apparatus, Barcroft-Warburg tissue respiration apparatus, Beckman spectro-photometers, a high speed refrigerated centrifuge, and electrophoresis apparatus. Greenhouse and artificial light rooms, and constant temperature dark rooms are available for plant biochemical studies.

Research is in progress in the fields of vitamins, antibiotics, proteins, minerals, lipids, enzymatic systems and microbiology. The Department cooperates with Animal Husbandry, Dairy Science, Poultry Science, and other departments in studying the nutritional requirements of various farm animals. Research in plant biochemistry includes studies on the biochemistry and mechanism of action of plant growth substances on photoperiodism, and on various aspects of metabolism.

Students planning to take work in biochemistry and nutrition should have adequate preparation in chemistry, the biological sciences, physics, and mathematics.

A program in animal and poultry nutrition may be developed from the offerings of various departments and schools. Students desiring such a program should consult the Dean of the Graduate School and the representatives of the appropriate departments.

*Graduate Advisor

FOR GRADUATES AND ADVANCED UNDERGRADUATES

401. Human Nutrition. (3-0). Credit 3. I

A study of the functions of food constituents in health and in physiological stress. The economic, national, and international aspects of human nutrition. Prerequisite: Chemistry 231 or 302. Mr. Richardson

410. Introductory Biochemistry. (3-3). Credit 4. I

The chemistry of the major constituents of living organisms. Biophysical and biochemical processes in plants and animals are stressed. The laboratory work includes the application of quantitative analytical procedures to plant and animal tissues and fluids. Prerequisites: Chemistry 223 and 231 or 302. Mr. Richardson

430. Electron Microscopy. (2-3). Credit 3. II

Descriptive treatment of various aspects of electron microscopy and laboratory practice employing selected specimens. Elementary discussion of electron optics, design of electron microscopes, photographic plates, underfocusing, overfocusing, asymmetry, colloidal state, shadow casting. Biological and physical science applications in all technical departmental fields of the College given equal attention. Prerequisite: Senior or graduate classification in a physical or biological science, or approval of the instructor. Mr. Whitehouse

Animal Husbandry 444. Large Animal Nutrition. (3-0). Credit 3. II

A review of elementary chemistry of carbohydrates, proteins, and fats, with particular emphasis on the role of these constituents in large animal nutrition. A comparison of the nutrition of the ruminant to that of the monogastric animal. A study of the secretions (enzymatic and hormonal) of large animals and the functions of each. The efficiency of each class of animals with regard to converting feed into fats, meats, wool, and work. Prerequisite: Animal Husbandry 303 or approval of Head of Department. Mr. Kunkel

Poultry Science 411. Poultry Feeding. (3-2). Credit 4. I

The history of poultry nutrition, a short study of the chemical composition of carbohydrates, proteins, fats, vitamins, and mineral mixtures as found in poultry feeds. Composition, functions, sources, and care of vitamins commonly required for efficient poultry feeding. A study of the nutritive value of the different grains, roughages, mill feeds, and protein concentrates used in poultry nutrition. Practice work in feeding of chicks, laying hens, and turkeys. Identification of feeds, the making of complete rations, diagnosis of lack of essentials in poultry rations. Prerequisites: Chemistry 223, 231. Mr. Couch

FOR GRADUATES

601. Biochemistry of Plants. (3-0). Credit 3. I

A study of the major groups of organic compounds occurring in plants with emphasis on their biological synthesis, physiological functions, and changes in chemical structure due to metabolic processes. Prerequisite: Biochemistry and Nutrition 410 or 611 or Chemistry 446. (Offered in 1959-60 and in alternate years thereafter.) Mr. Joham

611. General Biochemistry. (3-0). Credit 3. I

A consideration of the chemical constituents and reactions of living cells. Particular emphasis is given to the metabolism and nutritional significance of proteins, carbohydrates, and lipids. Prerequisite: Chemistry 302. Mr. Prescott

612. Laboratory Procedures in Biochemistry. (0-6). Credit 2. I

A laboratory course designed to familiarize the student with the application of chemical and biological methods to the solution of fundamental biochemical problems. Prerequisite: Biochemistry and Nutrition 611 or registration therein. Mr. Prescott

613. Vitamins. (3-0). Credit 3. II

The role of vitamins in animal nutrition and their occurrence in plant and animal tissues. Prerequisite: Chemistry 302. Mr. Couch

614. The Determination of Vitamins and Minerals. (0-3). Credit 1. II

A laboratory course designed to familiarize the student with methods for the determination of vitamins and minerals in biological materials. Prerequisite: Biochemistry and Nutrition 613 or registration therein. Mr. Couch

615. Experimental Animal Procedures. (0-3). Credit 1. II

A laboratory course involving the management, preparation of purified rations, and the production and cure of nutritional diseases. Prerequisites: Biochemistry and Nutrition 613, 614 or registration therein. Mr. Richardson

618. Chemistry and Metabolism of Lipids. (2-0). Credit 2. II

An advanced course in lipid chemistry and metabolism. Prerequisite: Biochemistry and Nutrition 611. Mr. Reiser

619. Proteins. (2-0). Credit 2. I

Advanced studies on the chemical, physical, and biological properties of proteins. Particular emphasis will be placed on the biological synthesis and metabolism of proteins. Prerequisite: Biochemistry and Nutrition 611. Mr. Lyman

620. Advanced Biochemical Techniques. (0-6). Credit 2. S

A laboratory course involving practice in the use of special techniques and instruments employed in biochemical research and the isolation, identification, and analysis of biological compounds. Preparation of representative enzymes and laboratory work on factors affecting their action. Prerequisites: Biochemistry and Nutrition 612, 619 or registration therein; Chemistry 324 or 342. Mr. Kunkel

624. Enzymes. (2-0). Credit 2. II

General principles of enzyme chemistry. The physical chemistry of enzyme action. Types of enzymes and coenzymes. Enzymes in the patterns of metabolism. Prerequisite: Biochemistry and Nutrition 601 or 611; Chemistry 324 or 342; or approval of instructor. Mr. Kunkel

626. Radioisotopes Techniques. (1-6). Credit 3. I

A lecture and laboratory course designed to acquaint the student with the methods of utilizing radioactive isotopes in biochemical and physiological research. Prerequisites: Biochemistry and Nutrition 611, 612, 620; or approval of the instructor. Mr. Liverman

627. Mineral Nutrition and Metabolism. (2-0). Credit 2. II

A study of the role of minerals in animal nutrition with emphasis on physiological function, biochemical interrelationships with other minerals and other nutrients, deficiency symptoms and nutritional significance. Prerequisite: Biochemistry and Nutrition 611. Mr. Reid

628. Biochemical Preparations. (0-6). Credit 2. S

A laboratory course dealing with the isolation and synthesis of organic compounds which are important in biological systems. Particular emphasis is placed on recent techniques of isolation. Prerequisite: Biochemistry and Nutrition 612. Mr. Prescott

630. Metabolism. (3-0). Credit 3. I

A descriptive consideration of the various chemical pathways of metabolism. Prerequisites: Biochemistry and Nutrition 611, 613. Staff

681. Seminar. (1-0). Credit 1 each semester. I, II

The study and discussion of original articles in biochemistry and nutrition and related fields designed to broaden the understanding of problems in the field and to stimulate research. Staff

685. Problems. Credit 1 or more each semester. I, II

An advanced course in biochemical laboratory procedures including preparations and instrumentation. Problems assigned according to the experience, interests, and needs of the individual student. Staff

691. Research. Credit 1 or more each semester. I, II

Research for thesis or dissertation. Laboratory facilities are available for original investigations in various phases of biochemistry and nutrition. Prerequisite: Approval of major advisor. Staff

Department of Biology

S. O. BROWN*, L. S. DILLON, C. C. DOAK (Head), W. J. DOBSON, E. H. GIBBONS,
H. L. GRAVETT, S. H. HOPKINS, CHARLES LAMOTTE*, A. B. MEDLEN, G. E. POTTER,
J. J. SPERRY, H. D. THIERS, N. P. WOOD

The graduate courses and research in biology include the three major fields of bacteriology, botany, and zoology, and the minor fields of aquatic biology, microtechnique, cytology, and physiology. Biology has its main applications in medicine, veterinary medicine, and the various agricultural fields including fisheries and wildlife management. The objective of the graduate courses in biology is to train for research and teaching.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

343. Histology. (2-3). Credit 3. I

Normal tissues of vertebrates including histogenesis of some. Histogenesis and organography of mammalian tissues reviewed. Prerequisite: Biology 217 or 335. Mr. Medlen

344. Embryology. (2-3). Credit 3. II

Introduction to general and comparative vertebrate embryology; emphasis on early development of frog, chick, and pig. Prerequisite: Biology 217 or 335. Mr. Gravett

345. Aquatic Biology. (2-3). Credit 3. II

Principles of aquatic biology; habitat studies, field collection, preservation, and identification of aquatic organisms. Prerequisites: Biology 101, 107; Entomology 201. Mr. Dillon

353. Mycology. (2-3). Credit 3. I

An introduction to the study of fungi, including structure, reproduction, ecological relationships, and taxonomic aspects. Emphasis on forms of special significance to commercial processes, plant diseases, antibiosis, and fermentation. Prerequisite: Biology 101, 206, or approval of instructor. (Offered in 1959-60 and in alternate years thereafter.) Mr. Thiers

419. Seminar in Biology. (1-0). Credit 1. I

Recent advances. For graduates and advanced undergraduate majors in either microbiology, botany, or zoology. May be repeated once for credit not to exceed two hours. Mr. Potter

420. Seminar in Biology. (1-0). Credit 1. II

Integration of the branches of biological science. May be repeated once for credit not to exceed two hours. Mr. Potter

422. Microtechnique. (1-6). Credit 3. II

Standard methods in the preparation of permanent microscopic slides of plants and animal tissues. Prerequisite: Twelve hours of biological science. Mr. Medlen

*Graduate Advisor

433. General Physiology. (3-3). Credit 4. I

Fundamental physiology of protoplasm; basic processes, and functions of organs and systems. Emphasis is placed on digestion, respiration, metabolism, excretion, muscular contraction, and reproduction. Prerequisites: Biology 107 and either graduate classification, Biology 218, or the equivalent. Mr. Brown

434. General Mammalian Physiology. (2-3). Credit 3. II

General comparative functions of the circulatory and nervous systems, organs of special sense and internal secretion. In the laboratory emphasis will be placed on work with the rat. Prerequisites: Biology 107 and either graduate classification, Biology 218, or the equivalent. Mr. Brown

435. Advanced Invertebrate Zoology. (3-3). Credit 4. I

Morphology, taxonomy, biology, and phylogeny of invertebrate animals. Prerequisite: Biology 107 or 108. Mr. Hopkins

436. Animal Parasitology. (3-3). Credit 4. II

Study of parasitic worms and protozoa; laboratory methods in parasitology. Prerequisite: Biology 435 or equivalent. Mr. Hopkins

453. Plant Anatomy. (2-3). Credit 3. I

Fundamental anatomy of the vegetative and reproductive organs of the plant with emphasis on development of tissue types. Technique of staining and mounting of plant tissues. Prerequisite: Six hours of plant sciences including Biology 101 or the equivalent. (Offered in 1958-59 and in alternate years thereafter.) Mr. Sperry

457. Bacterial Ecology. (2-6). Credit 4. II

Relation of bacteria to their environment, especially to other microorganisms. Methods of isolation, identification, and differentiation. Prerequisite: Biology 206. (Offered in 1958-59 and in alternate years thereafter.) Mr. Gibbons

Dairy Science 320. Bacteriology of Dairy Products. (3-3). Credit 4. I

Relation of microorganisms to quality in milk and milk products; starter and fermented milk culture management; sanitary control on farms and in commercial dairies; standard analytical procedures according to the American Public Health Association. Prerequisite: Biology 206. Mr. Moore

**Dairy Science 326. Food Preservation and Decomposition. (3-3).
Credit 4. II**

The microbiology of human foods and accessory substances. A study of raw and processed foods, emphasizing the physical, chemical, and biological phases of spoilage. Standard industry techniques of inspection and control. Prerequisite: Biology 206. Mr. Moore

**Veterinary Microbiology 435. Microbiology and Immunology. (3-4).
Credit 4. I**

The principles of microbiology and immunology. Emphasis is placed on the general morphology, physiology, and immunologic reactions of microorganisms important in veterinary medicine. Special attention is given to the biologics in the diagnosis and treatment of infectious diseases. Prerequisites: Second year classification in veterinary medicine. Staff

**Veterinary Microbiology 436. Pathogenic Microbiology. (3-3).
Credit 4. II**

A study of the general staining procedures, cultural methods and media preparation for bacteria; and the morphology, cultural characteristics, and pathogenicity of microorganisms which produce diseases in domestic animals and man. Prerequisite: Veterinary Microbiology 435. Staff

FOR GRADUATES

603. Advanced Vertebrate Zoology. (1-5). Credit 3. II

Phylogeny of vertebrates based on comparative anatomy, histology, embryology, and distribution. Prerequisites: Biology 218, 343, 344, or the equivalent. Mr. Potter

604. Advanced Embryology. (1-5). Credit 3. I

Comparative and experimental studies of the mechanics of embryonic development. Prerequisites: Biology 218, 343, 344, or the equivalent. (Offered in 1958-59 and in alternate years thereafter). Mr. Gravett

608. Ecology and Taxonomy of the Algae. (2-6). Credit 4. II

A study of the form, structure, reproduction, and ecology of the algae, with detailed work on selected locally available forms, both marine and fresh water. Prerequisite: Biology 327 or 353 or approval of the instructor. (To be offered in 1958-59 and in alternate years thereafter.)

615. Cytology. (2-6). Credit 4. I

An intensive study of the organization and activities of the cell, with emphasis on topics related to cytogenetics and cytotaxonomy. Prerequisites: Genetics 301; approval of the instructor. Mr. LaMotte

619. Systematic Botany. (2-6). Credit 4. I, II

Principles of taxonomy. Phylogenetic considerations and criteria used in schemes of classification. History of classification. Nomenclature and identification. Field and herbarium techniques. Prerequisite: Biology 102, or 327, or approval of the instructor. Mr. Sperry

620. Systematic Botany. (2-6). Credit 4. I, II

Survey of Angiosperms with emphasis on relationships. Biosystematics and modern taxonomy. Procedures in monograph preparation. Monographers. Field and herbarium techniques with problems designed for individual needs and interests. Prerequisite: Biology 619. (Offered in 1959-60 and in alternate years thereafter.) Mr. Sperry

623. Plant Morphology. (2-6). Credit 4. II

A study of the anatomical, reproductive, and organogenetic features of representative vascular plants; emphasis on economic forms. Prerequisite: Biology 327 or the equivalent. Mr. LaMotte

627. Helminthology. (3-3). Credit 4. I

A study of the parasitic worms, especially Trematoda, Cestoda, Nematoda, and Acanthocephala. Prerequisite: Biology 436. (Offered in 1958-59 and in alternate years thereafter.) Mr. Hopkins

630. Protozoology. (3-3). Credit 4. II

Morphology, taxonomy, physiology, reproduction, phylogeny, ecology, and life history of both free living and parasitic protozoa. May be taken concurrently with parasitology. Prerequisite: Biology 108. (Offered in 1959-60 and in alternate years thereafter.) Mr. Hopkins

632. Methods in General Physiology. (2-6). Credit 4. II

Methods for the quantitative study of metabolism, respiration, circulation, excretion, movement, and other basic physiological phenomena. Recent advances in physiological methods to be presented on a seminar basis. Prerequisite: Biology 433 or the equivalent. Mr. Brown

635. Physiology of Microorganisms. (2-6). Credit 4. I

An advanced consideration of the physiological activities of bacteria with special emphasis on metabolism. Prerequisites: Biochemistry and Nutrition 312 or 410; Biology 206. (Offered in 1958-59 and in alternate years thereafter.) Mr. Wood

647. Industrial Microbiology. (2-6). Credit 4. II

Microorganism as the basis of industrial processes. Practice includes antibiotic assay, analysis of products of metabolism, and fermentation balances. Prerequisites: Biochemistry and Nutrition 312 or 410; Biology 206. (Offered in 1959-60 and in alternate years thereafter.) Mr. Wood

649. Biology of the Endocrine Glands. (3-3). Credit 4. I

A study of the structure, development, comparative anatomy, and physiology of the endocrine glands of the different animal groups. Prerequisites: Three hours of either anatomy or anatomy and physiology. Mr. Brown

651. Mycology. (2-6). Credit 4. II

Detailed studies of the fungi, with emphasis on life cycles of representative forms; genetics and cytology; principles of taxonomy; ecology and geographical distribution. Actinomycetes and lichens are also considered. Prerequisite: Biology 353 or approval of the instructor. (Offered in 1959-60 and in alternate years thereafter.) Mr. Thiers

653. Zoogeography. (3-0). Credit 3. II

A study of the distribution of animals during geologic and present times; emphasis on the role of ecology and the effects of geography upon terrestrial and marine distribution. Prerequisite: Twelve hours of biological sciences, including at least 3 semester hours of advanced courses. Staff

656. Analytical Histology. (2-6). Credit 4. II

Designed to acquaint the student with certain quantitative histochemical techniques in plant and animal science as applied to nucleoproteins, carbohydrates, lipids, and enzymes. Presentation of cytological evidences which aid in localizing the activities of nucleoproteins in cell metabolism. Prerequisites: Biology 343 or 453 or the equivalent; Chemistry 301. Staff

681. Seminar. (1-0). Credit 1. I, II

Detailed reports on specific topics in the field chosen. Prerequisite: Graduate classification in the appropriate field. Staff

685. Problems. Credit 1 to 4 each semester. I, II

Limited investigations in fields other than those chosen for thesis or dissertation. Staff

691. Research. Credit 1 or more each semester. I, II

Research for thesis or dissertation. Prerequisite: Approval of ranking professor in the field chosen. Staff

**Plant Physiology and Pathology 607. Physiology of the Fungi. (3-0).
Credit 3. I**

A general course in the physiological activities of fungi, including growth and development, mineral nutrition, carbon and vitamin nutrition, the chemistry of metabolic products, fungicides, and the physiology of parasitism and resistance. Prerequisite: Plant Physiology and Pathology 314. (Offered in 1959-60 and in alternate years thereafter.) Mr. Joham

**Plant Physiology and Pathology 618. Bacterial Plant Diseases. (2-3).
Credit 3. I**

A detailed study of bacterial diseases of fruit and vegetable crops, field crops and ornamental plants, with special emphasis upon the nature of the disease, dissemination of the pathogen and methods of control. Prerequisites: Plant Physiology and Pathology 401, 403 or 405 or the equivalent. (Offered in 1959-60 and in alternate years thereafter.) Mr. Rosberg

Plant Physiology and Pathology 620. Plant Viruses. (2-0). Credit 2. I

Lecture presentation and discussion of the nature and properties of plant viruses. Methods of virus transmission, host plant reactions to viruses, serological reactions, and methods of purification of viruses for examination under the electron microscope, and the study of economically important plant virus diseases and their control. Prerequisites: Plant Physiology and Pathology 401, 403, or 405 or the equivalent. (Offered in 1958-59 and in alternate years thereafter.) Mr. Rosberg

Division of Business Administration

L. E. DAVIDS, R. L. ELKINS, D. R. FITCH, P. B. GOODE, T. R. HAMILTON, S. C. HOYLE, JR., T. W. LELAND (Head), T. D. LETBETTER, W. S. MANNING, E. S. PACKENHAM, J. E. ROCHE, R. M. STEVENSON, T. R. YANTIS

The graduate work in business administration is designed to train students for research or for careers in business and government where the student desires a more advanced course than is offered at the undergraduate level. Students preparing to enter the teaching profession may take a combination of business and education courses. Graduate students may specialize in accounting, finance, general business, management, marketing, or statistics.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

303. Statistical Method. (3-3). Credit 4. I, II, S

Collection, tabulation, presentation, and analysis of data. A study of sampling, graphics, averages, ratios and coefficients, dispersion, skewness, probability and error, index numbers, seasonal and long-time trend, barometers, correlation. Prerequisite: Mathematics 101. Staff

304. Business Cycles and Business Measurements. (3-0). Credit 3. I, II, S

An empirical and statistical study of economic fluctuations; theory, causes, and control of business cycles; business barometers and forecasting. Study of economic and statistical services. Prerequisite: Business Administration 303. Mr. Hamilton

305. Business Law. (3-0). Credit 3. I, II, S

Nature and scope of law; court system; homestead and exemption laws of Texas; law of contracts; principal and agent; business organizations, including partnerships and corporations; the Texas community property laws. Prerequisite: Sophomore classification. Staff

306. Business Law. (3-0). Credit 3. I, II, S

Additional studies in the law of business, dealing with bailments, carriers, mortgages, suretyships, negotiable instruments, banks and banking, wills and estates, sales, bankruptcy. Prerequisite: Business Administration 305. Staff

308. Law of Private Corporations. (3-0). Credit 3. I, II

Powers and limitations of the corporate form of business organization as distinguished from other forms of business enterprise. Legal problems encountered in formation, management, financing, and dissolution of corporations. Rights of corporate stockholders and creditors. Legislative control under state and federal statutes. Prerequisite: Business Administration 306. Staff

320. Life Insurance. (3-0). Credit 3. II

Fundamentals of life insurance and annuities; types of life insurance policies and their utilization in private life and business. Rate determinants, reserves, dividends, policy terms, and selection of risks. Distinguishing characteristics of group and industrial insurance. Basic principles and common uses of annuities. The course is designed to provide a knowledge of the fundamentals of life insurance and annuities as a useful background for laymen, businessmen, and life insurance salesmen. Prerequisite: Business Administration 315. Staff

322. Property Insurance. (3-0). Credit 3. I

The nature of property insurance and the principles of its employment. Fire insurance, marine insurance, and miscellaneous types of insurance. Emphasis is placed on underwriters, contracts, coverage, special endorsements, and rate determinants for each of the broad fields indicated above. The course is designed for students who are considering employment in the insurance field and for potential property managers. Prerequisite: Business Administration 315. Mr. Stevenson

324. Casualty Insurance and Suretyship. (3-0). Credit 3. II

Principles and practices of casualty insurance and suretyship insurance. Course covers the following fields of insurance: (1) automobile; (2) aviation; (3) workmen's compensation; (4) general liability; (5) power plant and machinery; (6) theft; (7) accident and health; (8) fidelity bonds; (9) suretyship. Prerequisite: Business Administration 315. Mr. Stevenson

330. Advanced Accounting. (3-0). Credit 3. II, S

Special phases of partnership accounting; joint ventures; consignments; installment sales, accounting for insurance costs; statement of affairs and accounting for insolvent concerns; compound interest; home office and branch accounting. Prerequisite: Business Administration 328 or registration therein. Staff

344. Marketing Problems. (3-0). Credit 3. II

A study of the problems involved in the marketing of industrial and consumer goods; the problems connected with customer relations, channels of distribution, brands, sales promotion, pricing, and legislation. Prerequisite: Business Administration 325. Mr. Yantis

402. Accounting Systems. (3-0). Credit 3. II

Survey of accounting systems in current use by different types of businesses. System design and installation. Manual and machine procedures. Prerequisite: Business Administration 328. Staff

403. Income Tax. (3-0). Credit 3. I, II

Income tax legislation; the present income tax law and regulations; treasury decisions, court decisions, and departmental rulings; income tax problems and returns. Prerequisite: Business Administration 327. Mr. Leland

404. Managerial Accounting. (3-0). Credit 3. II

A study of the uses of accounting information by management. Emphasis is placed on accounting procedures and reports essential to management. Cost analysis, cost control, budgeting and controllership. Prerequisite: Business Administration 329. Mr. Letbetter

407. Auditing. (3-0). Credit 3. I

Auditing procedures used by internal auditors and independent public accountants; preparation of working papers. Prerequisites: Business Administration 328, 329. Mr. Manning

408. Auditing. (3-0). Credit 3. II

A continuation of Business Administration 407. Work on an audit practice case with preparation of working papers and audit report, case studies involving auditing problems in special situations. (Required for students who plan to enter public accounting.) Prerequisite: Business Administration 407. Mr. Manning

409. Survey of Accounting Principles. (3-0). Credit 3. I, II, S

A survey of accounting designed for students majoring in engineering and architecture. The course provides for a survey of accounting procedures, basic elements of cost accounting, and the preparation and interpretation of financial statements. The course is not as comprehensive as Business Administration 227, 228, is not open to students in business administration, agricultural administration, or liberal arts. Prerequisite: Junior classification. Staff

418. Corporation Finance. (3-0). Credit 3. I, II, S

Common forms of business organization with special attention to the corporation; advantages and disadvantages of incorporation; capital stock and bonds; working capital; surplus and dividend policy; corporate expansion and industrial combination; failure and reorganization. Prerequisite: Economics 205 or the equivalent. Staff

420. Principles of Investment. (3-0). Credit 3. I, II, S

The development of investment policy; the character of investment risk; a comparison of investment media; a description of security markets and their operations. Prerequisite: Business Administration 418. Mr. Davids

422. Personnel Problems of Industry. (3-0). Credit 3. I, II, S

The relation of the worker to his employer, the methods of job finding, interviewing aids, occupational trends, scientific management, the functions and structure of personnel departments, employee welfare activities, and other problems of contemporary industrial development. Prerequisite: Junior classification. Mr. Elkins

423. Personnel Policies and Techniques. (3-0). Credit 3. I, S

Programs and agencies which workers and employers have developed to improve their economic and social status; job analysis, description, and classification; wage and salary problems and procedures; personnel records. Prerequisite: Business Administration 422. Mr. Elkins

427. Insurance Law. (3-0). Credit 3. II

Law cases on insurance to develop an understanding of the methods of administrative control by the state; typical clauses of insurance policies and their interpretation by the courts; technical legal pitfalls; case examples from all forms of insurance coverage; Texas insurance law. Prerequisite: Business Administration 305. Mr. Goode

428. Real Estate Titles and Conveyances. (3-0). Credit 3. I, II, S

The ownership and transfer of titles to real property, including deeds, easements, urban and rural property with special attention to zoning, building codes, private restrictions and conditions. The law of fixtures, timber and crops, mortgages and liens, building contracts, plans and specifications, performance bonds, mines and minerals, contracts of sale, escrow and earnest money agreements, real estate brokers, sufficiency of property description and other matters related to real property. Prerequisite: Business Administration 305. Mr. Hoyle

430. Cost Accounting Survey. (3-0). Credit 3. I, II, S

An introductory cost accounting course following Business Administration 409, for architects, engineers, and agricultural students. Purposes and uses of cost accounting; elements of cost; unit costs for use in bidding on contracts; comparison of cost procedures; job order and process costs, budgets, and standard costs; cost reports. Prerequisite: Business Administration 409. Mr. Letbetter

432. Security Analysis. (3-0). Credit 3. II

Methods of analyzing individual security issues, establishment of principles of selection and protection of security holdings, setting up sound and workable tests of safe investments including financial statement analysis, understanding rights and interests of investors in senior securities and owners of common stock. Prerequisite: Business Administration 420. Mr. Davids

434. Problems in Finance. (3-0). Credit 3. II

The course presents a series of comprehensive financial problems confronting the management of large and small businesses. The analysis and solution of the problems utilize the techniques and methods acquired in previous courses. The case system is used to give the student practice in linking up the related legal, accounting, and financial aspects of each situation. Prerequisite: Business Administration 418. Mr. Davids

436. Sales Management. (3-0). Credit 3. II, S

A consideration of the problems confronting the modern sales executive; organization of sales departments, product research, selection and recruiting, compensation plans, routing, supervision, and costs connected with sales administration. Prerequisite: Business Administration 435. Staff

437. Applied Life Insurance. (3-0). Credit 3. I

This course applies the principles of life insurance to the business field with particular emphasis on sole proprietorships, partnerships, key-man problems and close corporation stock purchase. It shows how life insurance can be used in preventing estate shrinkage. Business insurance, tax problems, and wills pertaining to life insurance are covered. Stocks, bonds, and real estate are measured against life insurance as good property. Prerequisite: Business Administration 320. Staff

445. Marketing Research. (3-0). Credit 3. I

A study of the nature and uses of marketing research in business. Emphasis is on methods of collecting and interpreting marketing information and specific application to problems in marketing. Prerequisites: Business Administration 205, 303. Mr. Yantis

446. Marketing Industrial Products. (2-0). Credit 2. II

Management aspects and economic factors affecting marketing policies are considered. Special emphasis is given to marketing research, marketing policies, channels of distribution, brand policy, pricing and control of marketing operations as they affect industrial products. A term project involving a report on the marketing of a specific industrial product is required of each student. Prerequisites: Business Administration 205 and Business Administration 303 or Mathematics 116. Mr. Fitch

463. Employee Supervision. (2-0). Credit 2. II

A study of the relationships of the first level of management to supervisors and to the staff. The objectives, organization, and tools of the supervisory level; how to handle problems of grievances, absenteeism, discipline, morale, induction, safety, and training of workers. Prerequisite: Senior classification. Mr. Elkins

FOR GRADUATES**601. Statement Analysis. (3-0). Credit 3. II, S**

An analytic study of the different kinds of statements for the guidance of executives, investors, and creditors; balance sheet and profit and loss ratios. Prerequisite: Business Administration 327 or 430. Mr. Letbetter

602. Consolidated Statements. (2-0). Credit 2. II

Consolidated balance sheets, consolidated income and surplus statements, holding companies, mergers. Prerequisite: Business Administration 330. (Offered in 1958-59 and in alternate years thereafter.) Mr. Packenham

603. Price Analysis. (3-2). Credit 4. I, S

Economic concepts relating to prices, statistical methods of analyzing prices, supply and demand curves, elasticity of demand, price forecasting, study and criticism of works on price analysis. Term paper required on factors affecting the price of a commodity. Prerequisites: Business Administration 303; Economics 203, 204. Mr. Hamilton

604. Statistics. (3-2). Credit 4. II, S

Curve fitting and empirical formulas. Multiple correlation, mathematical and graphic. Sampling and measures of unreliability. Chi-square test. Analysis of variance and covariance. Prerequisites: Business Administration 303; Mathematics 101. Mathematics 110 is recommended. Mr. Hamilton

605. Accounting Problems. (3-0). Credit 3. I

A study of advanced accounting theory and problems dealing primarily with corporation accounting, assets and liabilities, analysis of statements, and cost accounting. The problems considered will be of the type currently stressed in accounting examinations. Prerequisite: Approval of instructor. Mr. Packenham

606. Accounting Problems. (3-0). Credit 3. II

A continuation of Business Administration 605. The topics will deal primarily with partnerships, fiduciaries, home office and branch, insurance, and auditing. Prerequisite: Approval of instructor. Mr. Pakenham

607. Market Analysis. (3-0). Credit 3. I

A critical analysis of selected problems in the field of marketing. Each member of the class will be required to present a term report on some specific problem in the field of distribution. Prerequisites: Business Administration 205, 303. Mr. Yantis

612. Advanced Taxes. (2-0). Credit 2. II

A study of special income tax problems of taxpayers; Federal estate and gift taxes; Texas inheritance tax; Texas franchise tax on corporations; claims for refund of taxes; preparation of protests to deficiency assessments; planning for tax savings. Prerequisite: Business Administration 403. (Offered in 1959-60 and in alternate years thereafter.) Mr. Leland

616. Governmental and Institutional Accounting. (3-0). Credit 3. I, S

A study of the accounting principles and procedures peculiar to governmental units and institutions. Prerequisite: Business Administration 328. Economics 412 is recommended. Mr. Letbetter

619. Legal Principles Relating to Accounting. (3-0). Credit 3. I, S

An intensive study of legal principles emphasizing those which arise in the practice of accounting. Mr. Goode

620. Law and Business. (3-0). Credit 3. I

Students write a paper on a topic of law in which they are interested, approved by instructor. Also, the following topics are covered: law and business, their relation to each other; present sources of law in Texas; community property laws of Texas; collection of judgments in Texas; ad valorem taxes; automobile accidents and other topics relating to business. Offered in 1958-59 and in alternate years thereafter.) Mr. Hoyle

621. Law of Municipal Corporations. (3-0). Credit 3. II

A presentation of the general principles of the law of municipal corporations (city governments) in their relation to private business and the public at large, dealing with aspects of police powers, taxation, indebtedness, administration, public welfare, and legislative control. Prerequisite: Business Administration 305. (Offered in 1959-60 and in alternate years thereafter.) Mr. Hoyle

622. Trade Regulations. (3-0). Credit 3. II, S

Delineation of governmental control intended to promote free competition and curb its abuses. A study of the federal anti-trust acts and their application by the courts; the Federal Trade Commission and its method of dealing with unauthorized business practices such as unfair competition, misleading advertising, price discrimination, and retail price maintenance. Prerequisite: Business Administration 305. Mr. Goode

630. Problems of Corporation Finance. (3-0). Credit 3. I

The financial problems of the profit-seeking corporation are discussed from the viewpoint of the corporate financial officer. Consideration is given to such matters as current financing, financial aspects of promotion, refunding operations, dividend policies, and corporate reorganization. The course is designed to exercise the principles of corporation finance. Prerequisite: Business Administration 418. (Offered in 1958-59 and in alternate years thereafter.) Mr. Davids

631. Business Investigation and Analysis. (3-0). Credit 3. II

The problems arising in the quantitative and qualitative analysis of railroad, public utility, and industrial securities are presented so as to train the advanced student of investments in the use of the tools of security analysis. The text material is supplemented by the consistent use of representative sources of investment information. Prerequisite: Business Administration 418. (Offered in 1959-60 and in alternate years thereafter.) Mr. Hamilton

634. Statistical Method Applied to Business Problems. (3-0). Credit 3. II

The use of statistical methods applied to sales control, cost studies, personnel management, forecasting sales and production of an individual concern, and forecasting general business activity. Readings, reports, and problems. Prerequisites: Business Administration 303, 604. (Offered in 1958-59 and in alternate years thereafter.) Mr. Hamilton

681. Seminar. (1-0). Credit 1 each semester. I, II

A critical examination of the subject matter presented in current periodicals, recent monographs and bulletins. Separate seminars will be conducted as required in fields such as accounting, finance, marketing, personnel administration, and statistics. Staff

685. Problems. Credit 1 to 3 each semester. I, II, S

Directed study on selected problems not covered in the thesis research or in other courses. Prerequisites: Graduate classification; approval of instructor. Staff

691. Research. Credit 1 or more each semester. I, II, S

Research for thesis. Staff

Department of Chemical Engineering

W. D. HARRIS, C. D. HOLLAND, J. D. LINDSAY* (Head)

The graduate program in chemical engineering is designed to give the student a well-rounded training in the fundamentals of chemical engineering and in research methods. The courses given cover various unit operations and chemical engineering thermodynamics, economics, and applications to petroleum refining. The applications courses utilize mainly petroleum and other hydrocarbon process data to develop examples of methods which are of general applicability. Courses devoted to specialized industrial technologies are given, but the major emphasis is on fundamentals.

Research is an integral part of the work leading to an advanced degree. The department specializes particularly in research on chemical engineering kinetics, absorption and extraction, and multicomponent distillation. Applied thermodynamics and other subjects also are covered. The extraction work is related mainly to the recovery and purification of cottonseed oil. The chemical engineering kinetics studies are concerned with catalytic alkylation, catalytic oxidation, methods of commercial reactor design, and comparison of laboratory with plant reactor performance. The distillation work is both experimental and theoretical.

The research facilities include, in addition to standard laboratory equipment, several precision analytical distillation columns (Oldershaw and Podbielniak), a precision gas analyzer, and a recording infra-red spectrometer. A mass spectrometer is also on the campus and is available for use by the department. These tools facilitate the prosecution of any research involving chemical analysis.

*Graduate Advisor

FOR GRADUATES AND ADVANCED UNDERGRADUATES

304. Unit Operations. (3-0). Credit 3. I, II

A study of fluid and heat flow, evaporation and drying. Prerequisite: Chemical Engineering 204. Mr. Holland

314. Unit Operations Laboratory. (0-3). Credit 1. II

Laboratory work based on Chemical Engineering 304. Prerequisite: Chemical Engineering 304. Staff

409. Oil and Gas Technology. (3-0). Credit 3. I

Application of the principles of chemical engineering to the treatment and processing of petroleum and its products. Emphasis is on unit operations. Prerequisite: Chemical Engineering 423. Mr. Holland

423. Unit Operations. (3-0). Credit 3. II, S

A continuation of Chemical Engineering 304 covering distillation, gas absorption, filtration, size reduction, separation, and mixing. Prerequisite: Chemical Engineering 304. Staff

426. Plant Design. (2-6). Credit 4. II

The solution of problems involved in the design and development of chemical engineering plants. These problems cover such factors as the capacity, selection, and location of equipment, reaction rates, economic balances, specifications, drawings, cost estimates, and plant location. Prerequisite: Chemical Engineering 441. Mr. Harris

429. Oil and Gas Technology Laboratory. (0-3). Credit 1. I

Laboratory work to accompany Chemical Engineering 409. Mr. Harris

433. Unit Operations Laboratory. (0-3). Credit 1. I

Laboratory work based on Chemical Engineering 423. Prerequisite: Chemical Engineering 314. Staff

447. Nuclear Engineering. (3-0). Credit 3. I

A study of the applications of engineering fundamentals to nuclear processes. The course will discuss nuclear reactions and how they may be applied to obtain power. Engineering problems involved in the construction and operation of nuclear reactors will be covered. Atomic fuels and their radioactive residues, as well as attendant health hazards, will be included. Prerequisites: Mathematics 210; Physics 204 or 219; senior classification. Mr. Holland

454. Chemical Engineering Thermodynamics. (3-0). Credit 3. I

A study of the applications of thermodynamics to chemical engineering processes and operations. Prerequisites: Chemical Engineering 423; Chemistry 324. Mr. Holland

451. Process Control and Instrumentation. (2-0). Credit 2. I

A study of the fundamental principles and methods used in the measurement and control of the process variables such as pressure, temperature, and flow rate. Prerequisite: Chemical Engineering 423. Staff

464. Chemical Engineering Kinetics. (3-0). Credit 3. II

An introduction to the kinetics of reactions and the application of fundamental principles to the design and operation of commercial reactors. Prerequisites: Chemical Engineering 441, 454. Mr. Holland

FOR GRADUATES

605. Chemical Engineering Economics. (3-0). Credit 3. I

Advanced calculations involving process design and process control as limited by least cost or maximum profit. Problems are based on the various unit operations and unit processes. Prerequisite: Chemical Engineering 423. Mr. Harris

606. Unit Operations. (3-0). Credit 3. II

Application of chemical engineering fundamentals in the refining of petroleum. Prerequisite: Chemical Engineering 423. Mr. Holland

607. Thermal Cracking. (3-0). Credit 3. I

Application of fundamentals of chemical engineering to process calculation on thermal cracking. This includes process control and process design. Prerequisites: Chemical Engineering 423, 606. Staff

608. Heat Transmission. (3-0). Credit 3. I

Process and process design calculations on equipment involving the transfer of heat by conduction, convection, and radiation. Prerequisite: Chemical Engineering 423. Mr. Harris

611. Furnace Design. (3-0). Credit 3. II

Process designs of furnaces. Involves radiant and convection heat transmission. Prerequisite: Chemical Engineering 608. Staff

612. Distillation. (3-0). Credit 3. I

Process and process design calculations involving distillation of multi-component and complex systems. Extractive and azeotropic distillation are covered. Prerequisite: Chemical Engineering 423. Mr. Holland

616. Estimation of Investment Cost. (2-0). Credit 2. II

Simplified methods of estimating cost of process equipment in the preparation of preliminary appraisals. Prerequisite: Chemical Engineering 423. Mr. Harris

617. Unit Processes in Petroleum Refining. (4-0). Credit 4. I

Calculations involving the effect of process variables on product yield and quality, rate of reaction, operating cost, and investment cost. Processes such as alkylation, isomerization, catalytic cracking, polymerization, thermal cracking, etc. will be covered. Prerequisites: Chemical Engineering 454, 616. Staff

618. Appraisal and Presentation of Chemical Engineering Data. (3-0). Credit 3. II

Emphasis will be placed on analysis of experimental data. Practice is obtained by writing reports based on specific problems. Prerequisite: Chemical Engineering 423. Staff

619. Corrosion of Materials of Construction. (3-0). Credit 3. I

The uses of materials of construction to preclude high corrosion rates in process equipment. Prerequisite: Chemical Engineering 423. Mr. Lindsay

623. Applications of Thermodynamics to Chemical Engineering. (3-0). Credit 3. II

A study of the applications of thermodynamics to chemical engineering operations and processes. Prerequisite: Chemical Engineering 454. Mr. Holland

624. Chemical Engineering Kinetics I. (3-0). Credit 3. I

A study of rates and mechanisms of chemical reactions. Thermal and catalytic reactions both homogeneous and heterogeneous are considered. Prerequisite: Chemical Engineering 423. Mr. Holland

625. Chemical Engineering Kinetics II. (3-0). Credit 3. II

A study of the physical factors affecting chemical reaction rates and of methods for design of reaction equipment. Prerequisite: Chemical Engineering 624. Mr. Holland

626. Oil and Fat Technology. (3-0). Credit 3. I

A study of the composition and properties of oils and fats, methods of extraction and purification, and their industrial utilization. Prerequisites: Chemical Engineering 423; Chemistry 302. Mr. Harris

627. Oil Mill Operation. (2-6). Credit 4. I

A study of the theoretical and practical operating characteristics of the various units used in vegetable oil production. The economic factors of each unit and their over-all effect on plant operation will be covered. Prerequisites: Chemical Engineering 423, 626 or registration therein. Mr. Harris

661. Nuclear Chemical Engineering. (3-0). Credit 3. I

This course has to do with the applications of chemical engineering to reactors and the utilization and disposal of residual products therefrom. It will cover such problems as materials of construction, corrosion, industrial utilization of reactors, the influence of radiation on materials, and the utilization of radiation from reactor residues to influence chemical reactions. Prerequisites: Mathematics 308; Physics 312. Mr. Holland

662. Nuclear Material Processing. (3-0). Credit 3. II

This course has to do with the special applications of unit operations and unit process to the handling of nuclear fuels and residual products from nuclear reactors. It will cover such topics as distillation, gaseous diffusion separation, liquid-liquid extraction, liquid-solid extraction, gas-solid extraction, ion-exchange, adsorption separations, beneficiation and metallurgical processing. Prerequisites: Chemical Engineering 423; Mathematics 308. Mr. Holland

663. Design of Nuclear Reactors. (3-0). Credit 3. I

This course applies the fundamentals of atomic and nuclear physics with engineering fundamentals to the design of nuclear reactors. Prerequisites: Mathematics 308; Physics 311, 312. Mr. Holland

665. Reactor Operation and Experimentation. (1-6). Credit 3. II

Characteristics of the reactor and procedures to be followed in operating it. Monitoring the reactor, control rod calibration. Various experiments using the reactor as a radiation source. Prerequisite: Approval of the Head of the Department. Mr. Holland

681. Seminar. (1-0). No credit. I, II

Graduate students will be required to attend one hour each week to discuss problems of current importance in connection with their research. Staff

685. Problems. Credit 1 to 6. I, II, S

Special work to suit individual or small group requirements. The work may cover the numerous particular problems in chemical engineering processes and operations. It may be laboratory work or conference and discussion. Prerequisite: Approval of Head of Department. Staff.

691. Research. Credit 1 or more each semester. I, II, S

Problems of unit operations and unit processes. For maximum credit comprehensive thesis must be prepared which is of sufficiently high calibre to permit a publication in the scientific and technical journals. Prerequisite: Approval of Head of Department. Staff

Department of Chemistry

R. B. ALEXANDER, P. K. CALAWAY (Head), C. K. HANCOCK, A. W. JACHE, A. F. ISBELL, F. W. JENSEN, E. A. MEYERS, E. B. MIDDLETON, J. O. PAGE, R. H. PATTON, W. M. POTTS, HENRY RAKOFF, N. C. ROSE, P. L. SARMA, A. F. SCHRAM, H. K. ZIMMERMAN, JR., R. A. ZINGARO

Graduate work in chemistry is offered at both the Master's and Doctorate levels. The program leading to the Master's degree is designed to provide the student with a strong fundamental knowledge and understanding in the major areas of chemistry. In addition, a thesis is required which affords the student an opportunity to actively participate in experimental or theoretical research.

The program leading to the Ph.D. degree is designed so that the student has the opportunity to spend more of his time in research. The dissertation which results from this research must satisfactorily demonstrate that the student is capable of (1) independent and creative research in a specialized area of chemistry and (2) that the student has a superior knowledge and understanding of this area in which his research activities were performed. In addition, the student must demonstrate that he has a broad and commanding knowledge of the subject matter in the general field of chemistry.

Opportunities for research are available to the graduate student in a variety of specialized areas. Among those in which research activities currently are available include organic phosphorous compounds, organic fluoride compounds, heterocyclic nitrogen compounds, halogenated dienes, natural products, compounds of pharmacological activity, structure studies, mechanisms, catalysis, and electronegativity. Other opportunities are found in the areas of kinetics, electroplating, corrosion and corrosion inhibitors, physical-organic chemistry of amino sugars, high frequency fields in analysis, microwave absorption and its applications to problems in chemistry, x-ray and electron diffraction studies of crystal and molecular structure. There are also research opportunities in the areas of polarography, gas chromatography, oxidation-reduction potentials, solubility studies in non-aqueous solvents, phase studies, volatile and non-volatile inorganic fluorine compounds. There are also opportunities for research in radiochemistry, the chemical deposition of semi-conducting surface films, positive halogen ions, and chemical reactions in liquid hydrogen telluride.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

301. Organic Chemistry. (3-3). Credit 4. I, II, S

An introduction to the chemistry of the compounds of carbon. A study of general principles and their application to various industrial processes.

The laboratory work serves as a basis of the course; the student here familiarizes himself with the reactions, properties, and relations of typical organic compounds. Prerequisite: Chemistry 102 or 109. Chemistry 216 is strongly recommended. Mr. Hancock, Mr. Rakoff

302. Organic Chemistry. (3-3). Credit 4. I, II, S

A continuation of Chemistry 301. Prerequisite: Chemistry 301. Mr. Hancock, Mr. Rakoff

323. Physical Chemistry. (3-3). Credit 4. I

Explanation and mathematical development of the theories and principles of chemistry. Topics discussed are atomic structure, gas laws, thermodynamics, thermochemistry, liquids, solutions, osmotic pressure, and colloids. Experiments in the laboratory substantiate the theories and principles developed in the classroom. Prerequisites: Chemistry 207 or 216; Mathematics 210. Mr. Meyers

324. Physical Chemistry. (3-3). Credit 4. II

Intensive study of homogeneous and heterogeneous equilibria, the phase rule, chemical kinetics, catalysis, hydrogen-ion concentration, electrolytic and galvanic cells and electrochemistry, photochemistry, and radioactivity. Prerequisite: Chemistry 323. Mr. Meyers

342. Physical Chemistry. (3-3). Credit 4. II

Explanation of basic chemical theories and principles with reference to their relationship to transformations in living matter. Special emphasis on such topics as atomic structure, diffusion and osmotic pressure, colloids, chemical equilibrium, catalysis, reaction velocity, hydrogen-ion concentration and its importance in biological processes. Prerequisites: Chemistry 207 or 216, and 301. Staff

400. Industrial Analysis. (1-6). Credit 3. I

Lectures, recitations, and conferences dealing with technical methods of analysis both rapid and exact. Before beginning an analysis the student is required to consult current literature and standard books of reference and present a written outline for criticism and suggestion.

The laboratory work comprises the analysis of limestone, fuels, lubricating oils, gas, boiler water, iron and steel, alloys, ores, paint, soap, sugar, asphalt, and other materials of engineering and industrial importance. Prerequisite: Chemistry 216. Mr. Zimmerman

447. Qualitative Organic Analysis. (1-6). Credit 3. II

The identification of the principal classes of organic compounds. Prerequisite: Chemistry 302. Mr. Potts

448. Electrochemistry. (2-3). Credit 3. II

A study of the theory of galvanic and electrolytic cells and their applications. Prerequisite: Chemistry 324. Mr. Meyers

449. Energetics. (4-0). Credit 4. I

Study and mathematical treatment of energy relationships involved in chemical and physical transformations. Special attention given to free energy, fugacity, and activity. Prerequisites: Chemistry 302, 324. Mr. Jensen

450. Colloidal Chemistry. (3-3). Credit 4. I

A study of theories and preparation of disperse systems. Prerequisites: Chemistry 302, 324. Mr. Schram

452. Inorganic Chemistry. (3-3). Credit 4. II

The periodic relationship of the elements, their application and compounds.

Laboratory work consists of advanced inorganic preparations. Prerequisite: Chemistry 324. Mr. Jache

FOR GRADUATES**607. Organic Preparations. (1-6). Credit 3. I**

Preparation of organic compounds, Prerequisite: Chemistry 302. Mr. Rose

608. Qualitative Organic Analysis. (1-6). Credit 3. II

Analysis of organic compounds. Prerequisite: Chemistry 302. Mr. Potts

609. Theory of Organic Chemistry. (3-0). Credit 3. I

The development and application of chemical theories to organic compounds. Prerequisite: Chemistry 302. Mr. Potts

611, 612. Principles of Physical Chemistry. (4-0). Credit 4 each semester. II, S

Study of gas laws, atomic structure, spectra, equilibria, and catalysis. Prerequisite: Chemistry 324. Mr. Jensen

620. Principles of Quantitative Analysis. (3-0). Credit 3. S

A study of the principles of gravimetric and volumetric analysis; theories and stoichiometry; recent developments. Prerequisite: Chemistry 400. Mr. Middleton

621. Chemical Kinetics. (3-0). Credit 3. I

Study of some of the present theories about chemical reaction rates and mechanisms. Prerequisite: Chemistry 324. Mr. Zimmerman

624. Physico-Organic Chemistry. (3-0). Credit 3. II

Mathematical and quantitative investigation of organic chemical phenomena. Prerequisites: Chemistry 302, 324. (Offered in 1958-59 and in alternate years thereafter.) Mr. Hancock

625. Petroleum Chemistry. (3-0). Credit 3. II

Practical and theoretical consideration of chemical reactions of petroleum hydrocarbons. Prerequisites: Chemistry 302, 324. (Offered in 1959-60 and in alternate years thereafter.) Mr. Hancock

626. Thermodynamics. (3-0). Credit 3. II

Theory and applications of classical thermodynamic functions. Prerequisite: Chemistry 449 or the equivalent. Mr. Meyers

628. The Non-Metallic Elements. (3-0). Credit 3. I

Study of the non-metals and their compounds. Recent developments. Knowledge of German or French desirable. Prerequisites: Chemistry 324; 449 and 452 desirable. Staff

630. The Metallic Elements. (3-0). Credit 3.

Study of the metals and their compounds. Recent developments. Knowledge of German or French desirable. Prerequisites: Chemistry 324; 449 and 452 desirable. Staff

632. Thermodynamics of Irreversible Processes. (3-0). Credit 3. I

Thermodynamics in non-equilibrium system, e.g., conduction of electricity and heat, thermoelectricity, relation phenomena, diffusion, viscosity, etc. Prerequisite: Chemistry 626. Staff

633. Alicyclic Compounds. (3-0). Credit 3. I

Occurrence, preparation, and properties of alicyclic compounds with special attention to those having biological activity. Prerequisite: Chemistry 302. (Offered in 1959-60 and in alternate years thereafter.) Mr. Rakoff

635. Heterocyclic Compounds. (3-0). Credit 3. I

Structure, preparation, and properties of heterocyclic compounds with special emphasis on those with biological activity. Prerequisite: Chemistry 302. (Offered in 1958-59 and in alternate years thereafter.) Mr. Isbell

636. Electrochemistry. (3-0). Credit 3. II

Advanced treatment of conductivity, electrochemical thermodynamics, galvanic cells, electrodeposition, and corrosion. Prerequisite: Chemistry 448 or the equivalent. Staff

637. Infrared Spectrometry. (3-3). Credit 4. I

The origin and nature of absorption in the rotational-vibrational region are developed. Analytical applications are made in the laboratory. Prerequisites: Chemistry 302, 324; Mathematics 210. Mr. Jensen

639. Instrumental Methods of Analysis. (1-6). Credit 3. II

Study and application of colorimetric methods. Nephelometry, turbidimetry, and flourometry. Prerequisite: Chemistry 400. Mr. Middleton

640. Principles of Qualitative Analysis. (3-0). Credit 3. II

Study of special reagents which exhibit a high degree of selectivity or specificity in their use in qualitative analysis. Prerequisite: Chemistry 620. Staff

641. Structural Inorganic Chemistry. (3-0). Credit 3. I

Study of nuclear and extranuclear structure, isotopes, valency of the elements, and stereochemistry of inorganic compounds. Prerequisites: Chemistry 324, 452. (Offered in 1959-60 and in alternate years thereafter.) Mr. Zingaro

642. Methods of Structural Chemistry. (3-0). Credit 3. II

A study of theory, methods, and application of structural determining (arrangement and bonding) of chemical species. Prerequisite: Chemistry 641 or approval of the instructor. (Offered in 1959-60 and in alternate years thereafter.) Mr. Jache

643. Inorganic Complex Compounds. (3-0). Credit 3. II

History, theories, and methods of investigations of inorganic complex compounds. Prerequisites: Chemistry 324, 452. (Offered in 1958-59 and in alternate years thereafter.) Mr. Zingaro

644. Quantitative Organic Analysis. (1-6). Credit 3. I

Determinations: Marco Dumas, sulfur, Carius hologen, Micro residue, fractionation, Micro Dumas, catalytic hydrogenation, carbon and hydrogen, Micro Kjeldahl, Rast molecular weight, molar refraction, active hydrogen, alkoxy, semi-micro saponification number. Prerequisites: Chemistry 302; reading knowledge of German. Mr. Isbell

645. Solubility. (4-0). Credit 4. II

Study of experimental methods of solubility measurements. Solubilization and detergency. Introduction to solubility theory. Prerequisites: Chemistry 324, 449; Mathematics 210. Mr. Zimmerman

646. Organic Reactions. (3-0). Credit 3. II

A comprehensive course stressing the scope and limitations of the useful synthetic reactions in organic chemistry. Not only will some of the more familiar reactions be discussed in greater detail, but some of the newer and less familiar reactions will be presented. Some time will be spent in describing unique experimental procedures as well as reaction mechanisms. Prerequisite: Chemistry 609. Mr. Rakoff

647. Polarography. (3-3). Credit 4. II

The treatment of the theory, instrumentation, and practical applications of polarography. Prerequisites: Chemistry 302, 324, 449. Staff

661. Radiochemistry. (3-0). Credit 3. I

A general course dealing with radioactive materials; their radiations; their preparation, purification, detection, identification, and their practical applications. Material on nuclear structures, nuclear transmutations, and radioactivity. Prerequisite: Chemistry 324 or 344. Mr. Zingaro

685. Problems. Credit 1 to 6. I, II, S

This is a course in special topics to suit small group requirements. The work will deal with the more recent problems and results in the various branches of chemistry. It may be laboratory work or conference and discussion. Prerequisite: Graduate classification. Staff

691. Research. Credit 1 or more each semester. I, II, S

Research for thesis or dissertation. Staff

Department of Civil Engineering

J. B. BATY, F. J. BENSON, S. J. BUCHANAN, B. M. GALLAWAY, E. L. HARRINGTON,
R. M. HOLCOMB, C. J. KEESE, W. H. NEDDERMAN, J. A. ORR, R. L. PEURIFOY,
C. E. SANDSTEDT*, R. E. SCHILLER, JR., J. H. SORRELS, H. K. STEPHENSON,
S. R. WRIGHT* (Head)

Sufficient graduate courses are offered in civil engineering to permit a student to specialize in a particular branch of civil engineering. These courses are designed to acquaint the student with the new developments in a particular field and to permit the student to study some of the more advanced problems not covered in the undergraduate curriculum. The Department is especially well equipped to teach courses in soil mechanics and foundations, highway engineering, structural engineering, hydraulic engineering, municipal engineering, and sanitary engineering.

*Graduate Advisor

FOR GRADUATES AND ADVANCED UNDERGRADUATES

401. Water and Sewage Treatment. (2-2). Credit 3. I, II, S

Principles and methods of water purification and sewage treatment and disposal; laboratory demonstrations of control tests and correlation of results with treatment plant operation; interpretation of reports; inspections of local plants. Prerequisites: Chemistry 102; Civil Engineering 311. Mr. Sorrels

402. Water Supply and Sewerage Practice. (2-2). Credit 3. I, II

Development of sources of water supply; determination of the quantity of storm water and domestic sewage; short problems relating to water supply distribution systems, sewer systems, and the general features of water purification and sewage treatment plants; appurtenances and treatment plant equipment; local inspections of water supply and sewerage systems. Prerequisites: Civil Engineering 338, 401. Mr. Baty

403. Sanitary Design. (2-3). Credit 3. II

Practical problems in the design of sewer systems and appurtenances; sewage treatment plants; water collection and distribution systems; water purification plants. Prerequisite: Civil Engineering 402 or registration therein. Mr. Baty

406. Sanitation and Public Health. (3-0). Credit 3. I

Relation of sanitation to public health; residential water supply and excreta disposal methods; municipal sanitary work, including refuse disposal; plumbing; control of food supplies; mosquito, fly, and rodent control; sanitation of swimming pools; industrial hygiene; organization of health departments. Prerequisite: Junior classification. Mr. Baty, Mr. Sorrels

407. Highway Engineering. (3-0). Credit 3. I, II, S

An introduction to problems in location, design, drainage, construction, and maintenance of highways, streets, and pavements. Road laws, finances, highway organizations and supervision briefly considered. The text is supplemented by lectures, the use of bulletins, models, and samples of materials. Prerequisites: Civil Engineering 202, 338, 465 or registration therein. Mr. Keese

408. Municipal Administration. (3-0). Credit 3. I

City government, including the city manager plan; relation of city to state; administration of city departments; public utilities; city planning. Prerequisite: Junior classification. Mr. Sorrels

409. Sanitary Laboratory. (2-3). Credit 3. I

Theory and practice in fundamental tests used in water and sewage treatment processes. Prerequisite: Civil Engineering 401. Mr. Sorrels

417. Bituminous Materials. (2-3). Credit 3. II

Origin, production, specifications, and tests of bituminous materials and mixtures used in the construction and maintenance of roads and pavements. Prerequisites: Senior classification in engineering and Civil Engineering 407 or registration therein. Mr. Gallaway

443. Materials of Construction. (1-3). Credit 2. I, II

Laboratory tests, supplemented with theory, of aggregates, cement, concrete mixtures, and masonry materials. Prerequisite: Senior classification. Mr. Gallaway

448. Engineering Economy. (2-0). Credit 2. I, II

Analysis of operating costs of engineering projects including interest, depreciation, fixed costs, overhead. Comparison of first cost economy versus ultimate economy. Prerequisite: Junior classification in engineering. Mr. Baty, Mr. Peurifoy

457. Traffic Engineering. (3-0). Credit 3. I

A study of vehicle operating characteristics, traffic flow, geometric design of roads, streets, and intersections, and methods of traffic control. Prerequisites: Civil Engineering 202, 407 or registration therein; Physics 204 or 219. Mr. Keese

458. Hydraulic Engineering. (3-0). Credit 3. II

Flow in pipes and complex pipe systems; non-uniform flow in open channels; pumping machinery; elementary hydraulic model theory. Prerequisite: Civil Engineering 338. Mr. Harrington, Mr. Schiller

463. Hydrology. (3-0). Credit 3. I

A study of the occurrences and measurements of precipitation and stream flow; relations between precipitation and run-off; estimating seepage; evaporation, run-off; surface, and flood discharges for drainage basins. Prerequisite: Civil Engineering 311. Mr. Harrington, Mr. Schiller

465. Soil Mechanics and Foundations. (2-2). Credit 3. I, II, S

An elementary introduction to soil mechanics and its application to the usual problems encountered in civil and architectural engineering. The origin, formation processes, and types of soils are reviewed. Methods of exploration and soil testing required for the design of various types of foundations, retaining walls, bridge abutments, coffer dams, earth dams, and other engineering structures. Prerequisites: Civil Engineering 305; Geology 320 or 422. Mr. Buchanan, Mr. Schiller

468. Statically Indeterminate Structures. (2-3). Credit 3. I

Definitions, functions, and identification of statically indeterminate structures; their uses, advantages, and disadvantages; general method of design; general method of analysis based on deflections; deflection computation for beams by elastic-curved-beam theory, moment areas, and conjugate beam; deflections of trusses by virtual work and Williot diagrams; preliminary designs; formulation and solution of simultaneous equations; superposition, final stresses; moment distribution; applications in the design of arches, rigid frames, and continuous beams. Prerequisite: Civil Engineering 345. Mr. Holcomb

473. Cost Estimating. (3-0). Credit 3. I, II, S

Approximate and detailed estimates of the cost of construction projects including earthwork, foundations, concrete, masonry, steel, and miscellaneous items. Costs are developed to include materials, equipment, labor, overhead, and profit. Prerequisite: Senior classification. Mr. Peurifoy

474. Contracts and Specifications. (2-0). Credit 2. I, II

Study of types of contracts frequently encountered in engineering practice, including agency, tort, real estate, sales, transportation. Preparation of representative specifications and contractual documents for engineering projects. Prerequisite: Senior classification in engineering or architecture. Mr. Peurifoy, Mr. Sorrels

476. Seminar. (1-0). Credit 1. I, II

A study of the methods of job procurement subsequent to graduation including letters of application and job interviews; responsibilities and obligations of the young civil engineer; professional ethics; membership in professional societies; professional registration; lectures by staff and practicing engineers. Prerequisite: Senior classification. Mr. Buchanan

478. Construction Plant and Methods. (3-0). Credit 3. II

Plant and equipment selection for earthwork, foundations, concrete and structural steel, based on performance and economy. Construction schedules, progress reports, and performance records. Prerequisite: Senior classification in engineering or architecture. Mr. Peurifoy

482. Aerial Photogrammetry. (2-3). Credit 3. I

A study of photogrammetric optics, characteristics of aerial photographs, aerial cameras, map projections, ground control, radial plots, mosaics, interpretation of aerial photographs, stereoscopic plotting instruments, and mapping form from oblique photographs. Prerequisite: Civil Engineering 201. Mr. Orr

483. Analysis and Design of Structures. (2-3). Credit 3. I, II

The over-all procedure of analysis and design, including functions, loads, layouts of force systems, analysis, design drafting, specifications, cost comparisons, and maintenance as applied to typical simple bridge and building structures, design of plate girders, trusses, and reinforced concrete buildings. Prerequisites: Civil Engineering 344, 346, 465. Mr. Holcomb, Mr. Nedderman

FOR GRADUATES**601, 602. City Management. (4-0). Credit 4 each semester. I, II**

Development of European and American cities; forms of city government; functions of the city manager; administration of municipal affairs; organization of city departments; city finances; public utilities; fire prevention and protection; police administration; parks and playgrounds; public health and welfare; housing; city planning. Mr. Orr

603. Sewage Treatment and Stream Sanitation. (4-0). Credit 4. I

Advanced studies of the theories of the various processes of sewage treatment, with special attention given to the details of the individual methods and units employed to effect these processes; and the requirements regarding the quality of sewage treatment plant effluents in relation to the sanitary protection of the receiving waters. Prerequisite: Civil Engineering 402. Mr. Baty

604. Water Quality and Treatment. (4-0). Credit 4. II

Advanced studies of the characteristics of available sources of water, standards of quality of public water supplies, and the theories of treatment and purification processes, with special attention given to the details of the methods and units employed to effect these processes. Prerequisite: Civil Engineering 402. Mr. Baty

607, 608. Environmental Sanitation. (4-0). Credit 4 each semester. I, II

Detailed study of environment and its relation to disease, covering malaria and its control; rodent control; sanitation of milk, shellfish, and other foods; collection and disposal of municipal refuse; sanitary aspects of air conditioning; housing sanitation, including plumbing and ratproofing; rural water supply and excreta disposal; sanitary inspection procedure. Mr. Sorrels

610. Industrial Wastes. (4-0). Credit 4. II

Amount and characteristics of the common industrial wastes; their effects upon sewage treatment; methods of treatment. Prerequisite: Civil Engineering 401 or the equivalent. Mr. Sorrels

621. Advanced Reinforced Concrete Design. (3-3). Credit 4. II

Plastic flow, pre-stressed concrete, torsion, deep beams; domes, ribbed arch roofs, flat-slab and girderless floors; rectangular tanks. Prerequisite: Civil Engineering 483. Mr. Nedderman

625. Geometric Design of Highways. (3-3). Credit 4 each semester. I, II

The advanced theory and practice in highway design. Design controls and criteria, elements of design, design of alignment, cross-section, intersections and interchanges, multilane expressways, and drainage structures. Prerequisites: Civil Engineering 407, 465. Mr. Keese

626. Structural Design of Pavements. (3-3). Credit 4. I, II

Structural design of flexible and rigid pavements, design of flexible pavements and construction practices. Design of rigid pavements, pavement joints and reinforcing, and construction practices. Laboratory consists of field and office problems supplementing the theory. Mr. Keese

627, 628. Hydraulic Engineering. (3-3). Credit 4 each semester. I, II

Advanced hydrology, water power development, flood control, irrigation. Mr. Harrington

629. Hydraulics of Open Channels. (3-3). Credit 4. I

Advanced problems in uniform and non-uniform flow in open channels; the hydraulic jump; control section; backwater profiles. Mr. Harrington

630. Ground Water Hydrology. (1-3). Credit 2. II

A quantitative study of the application of the principles of hydrology to the development and use of ground water supplies. Prerequisites: Geology 620 or the equivalent, registration in 625. Mr. Harrington

631. Advanced Structural Analysis. (3-3). Credit 4. I

Review and correlation of general procedures for analyzing indeterminate structures, deflections by structural geometry and by energy considerations; simultaneous equations by deflections and by energy considerations; neutral point and column analogy methods for fixed arches and frames; applications of moment distribution to complex structures. Prerequisite: Civil Engineering 483. Mr. Holcomb

632. Advanced Structural Design. (2-6). Credit 4. II

Design of complex and indeterminate structures; built up columns; members with variable section; grillage foundations; design and detailing of continuous frames, arches, towers, and building frames. Prerequisites: Civil Engineering 468, 483. Mr. Holcomb

633. Advanced Mechanics of Materials. (4-0). Credit 4. I

Principal stresses and theories of failure of elastic action; stress concentration; unsymmetrical bending; mechanical methods for study of internal stresses; special problems such as bending in flat plates, buckling of webs, bending in curved beams and hooks. Mr. Nedderman

634. Airfield Planning and Design. (2-0). Credit 2. II

Study of regional planning air traffic routing, landing requirements, methods for development of master plans for site selection, airfield design requirements involving layouts, pavement selection, and design. Review and application of criteria of design of drainage for all types of fields. Mr. Buchanan

635, 636. City Street Design. (2-0). Credit 2 each semester. I, II, S

The fundamentals of city planning as related to street planning, design, and construction. Traffic characteristics and operation. Geometric design of streets and intersections, drainage, pavement types and design, and financing municipal street improvements. Prerequisite: Civil Engineering 407. Mr. Keese

639. Advanced Traffic Engineering. (3-3). Credit 4. II

Advanced theory and practice in techniques of investigations in traffic characteristics. Advanced theory and application of traffic regulations, traffic control, traffic design, administration, and planning. Laboratory consists of field and office problems supplementing the theory. Prerequisites: Civil Engineering 407, 457. Mr. Keese

649. Soil Mechanics. (3-3). Credit 4. I

A study of foundation materials as they exist and of the various types of soils, their physical properties, testing procedure, and principles of classification. For advanced undergraduates and for graduate electives. Prerequisites: Civil Engineering 465; Geology 320. Mr. Buchanan

650. Soil Mechanics. (3-3). Credit 4. II

A study of theory and practice in foundation exploration, laboratory investigations of undisturbed foundation samples, stress distribution through soils; problems in foundation design, correlation of settlement data from actual observations on the behavior of existing structures, stability of embankments, backfill pressures. Prerequisite: Civil Engineering 649. Mr. Buchanan

651. Advanced Theory and Application of Soil Mechanics. (3-3). Credit 4. I

Special lectures, discussions and applications of theory to solution of major problems encountered in practice of soil engineering, embracing the fields of seepage, earth work design, foundation design, port structures, and special problems. Prerequisite: Civil Engineering 650. Mr. Buchanan

653. Flexible Materials of Construction. (2-3). Credit 3. I

Theory supplemented with laboratory tests of bitumen, tars, and plastics. Stabilization of base and subgrade materials. Advanced mix design and evaluation of test methods; rheology and chemistry of asphalt. Prerequisite: Civil Engineering 417. Mr. Gallaway

654. Rigid Materials of Construction. (2-3). Credit 3. II

A study of the physical and chemical properties of rigid materials of construction; laboratory tests of different kinds of concrete, tests of metals and laminates; theory of corrosion of ferrous metal; corrosion mitigation; shrinkage and plastic flow of stressed concrete; design of concrete mixtures for resistance to alkali reactive aggregates, blasts from jet planes, salt water, and cavitation in hydraulic works. Prerequisite: Civil Engineering 443. Mr. Gallaway

685. Problems. Credit 1 to 6 each semester. I, II, S

A course offered to enable majors in civil engineering to undertake and complete with credit in their particular fields of specialization limited investigations which do not fall within their thesis research and which are not covered by other courses in the established curriculum. Credit for this course normally will be limited to four credits per semester, but in exceptional circumstances, the Head of the Department may approve a maximum of six credits in one semester or summer term. Staff.

691. Research. Credit 1 or more each semester. I, II, S

Research for thesis or dissertation. Staff.

Department of Dairy Science

See also Animal Breeding and Animal Nutrition.

M. A. BROWN, R. E. LEIGHTON, A. V. MOORE*, I. I. PETERS, I. W. RUPEL* (Head),
CARL VANDERZANT

Graduate work is offered in dairy production and in dairy manufacturing. The dairy herds totaling 175 animals of milking age afford opportunities to study various problems in nutrition, breeding, artificial insemination, and management.

The various processing operations and the procedures in bacteriological and technical control may be studied. Experiment Station projects are underway in both production and manufacturing. Such projects offer an opportunity for the graduate student to study these or allied problems.

Minors or joint majors, or both, with such departments as Biochemistry and Nutrition, Genetics, and others, according to the field of interest of the candidate may be arranged. Adequate preparation in the basic sciences supporting these allied fields will need to be presented upon entrance, or when lacking may be prescribed as prerequisites.

*Graduate Advisor

FOR GRADUATES AND ADVANCED UNDERGRADUATES

301. Market Milk. (3-2). Credit 4. I

Nutritional value of milk; milk and public health; organization of city milk supplies; processing and distribution and inspection of market milk. Prerequisites: Biology 206; Dairy Science 202. Mr. Vanderzant

311. Technical Control of Dairy Products. (2-6). Credit 4. II

Methods of analysis of milk and milk products, and their use in controlling the composition and quality of dairy products. Prerequisites: Chemistry 223,231; Dairy Science 301. Mr. Vanderzant

316. Butter and Cheese Manufacture. (3-4). Credit 4. II

Processing procedures in the commercial manufacture of domestic and foreign cheeses; creamery butter manufacture. Prerequisites: Dairy Science 301, 320. (Offered in 1958-59 and in alternate years thereafter.) Mr. Peters

320. Bacteriology of Dairy Products. (3-3). Credit 4. I

Relation of micro-organisms to quality in milk and milk products; starter and fermented milk culture management; sanitary control on farms and in commercial dairies; standard analytical procedures according to the American Public Health Association. Prerequisite: Biology 206. Mr. Moore

326. Food Preservation and Decomposition. (3-3). Credit 4. II

The microbiology of human foods and accessory substances. A study of raw and processed foods, emphasizing the physical, chemical and biological phases of spoilage. Standard industry techniques of inspection and control. Prerequisite: Biology 206. Mr. Moore

407. Ice Cream Manufacturing. (2-3). Credit 3. I

The manufacture of ice cream, sherbets, and ices, and the physical and chemical principles involved; ice cream plant equipment; flavoring materials; merchandising. Prerequisites: Agricultural Engineering 213; Dairy Science 202. Mr. Vanderzant

410. Dairy Plant Management. (1-2). Credit 2. II

Dairy plant operating efficiency. Special economy problems incident to plants handling fluid milk, butter, cheese, and concentrated dairy products. Prerequisite: Senior classification in dairy science. Mr. Moore

415. Condensed and Powdered Milk. (2-2). Credit 3. I

The manufacture and distribution of condensed and evaporated milk, milk powder, milk sugar, casein, and other milk products. Prerequisites: Chemistry 231 or equivalent; Dairy Science 301; one semester of physics. Mr. Moore

417. History and Development of Dairy Cattle. (2-2). Credit 3. I

The breeding and development of a dairy herd, including artificial breeding, selection of breeding animals, production testing and type classification, breeding programs, herd analysis, and a review of development of the breeds. Prerequisites: Dairy Science 202; Genetics 301. Mr. Brown

418. Feeding and Management of Dairy Cattle. (3-2). Credit 4. II

The feeding, care, and management of the dairy herd exclusive of management practices covered in Dairy Science 417; calf raising, developing the dairy heifer, care of dry and fresh cows, feeding for milk production, disease control, silage buildings, and related topics. Prerequisites: Animal Husbandry 303 or Biochemistry and Nutrition 401; Dairy Science 202. Mr. Leighton

421. Seminar. (1-0). Credit 1. I, II

A review of current dairy literature and presentation of papers on selected dairy topics. May be elected a second time for one additional credit. Prerequisite: Senior classification. Mr. Rupel

451. Special Problems. Credit 1 to 4. I, II

Special problems in dairy production or dairy manufactures. May be repeated for additional credit when less than four credits have been earned. Prerequisites: Senior classification; approval of Head of Department. Staff

FOR GRADUATES**601, 602. Dairy Production. (2-6). Credit 4 each semester. I, II**

An advanced study of dairy production, feeding, breeding, and management. Prerequisite: Dairy Science 418. Mr. Rupel, Mr. Leighton

603, 604. Dairy Manufactures. (2-6). Credit 4 each semester. I, II

An advanced study of dairy manufactures. Prerequisites: Dairy Science 316, 407, 415. Mr. Moore, Mr. Peters, Mr. Vanderzant

609. Dairy Cattle Breeding and Management. (3-0). Credit 3. S

Advancements in dairy cattle feeding, breeding, management, and commercial milk production. A three-week course for agricultural workers offered in summer sessions only. Not open to dairy science majors. Prerequisite: Dairy Science 418 or 420 or approval of Head of Department. Mr. Leighton

685. Problems. Credit 1 to 4 each semester. I, II, S

A study of research methods and a review of scientific literature dealing with individually selected problems in production or manufactures and not pertaining to thesis or dissertation. Prerequisite: Graduate classification. Staff

691. Research. Credit 1 or more each semester. I, II, S

Research leading to thesis or dissertation in the respective fields of dairy production and dairy manufactures. Prerequisite: Graduate classification. Staff

Department of Economics

A. F. CHALK* (Head), W. H. DELAPLANE, AURELIUS MORGNER, E. E. LIEBHAFSKY

Graduate study in economics is offered leading to the degree of Master of Science. Curricular offerings are designed to equip the student with a specialized knowledge for careers in teaching, government, and business, and to give a sound preparation for continuing graduate study toward the doctorate elsewhere.

Prerequisites: To major in economics, the student should present undergraduate credits of 30 semester hours in economics, business administration, and the social sciences, of which 21 should be in Economics. To minor in economics, the student should submit a minimum of 12 semester hours of undergraduate credit in economics. Up to 6 semester hours of prerequisites in economics for majors and minors may be granted for undergraduate courses in statistics, corporation finance, business cycles, and other closely related work in business administration or agricultural economics.

Those students who major in economics are expected to enroll in Courses 601, 602 and to have a good knowledge of economic theory. The thesis may be written in any of several fields, including economic theory, labor, international economics, public finance, and fiscal policy.

FOR GRADUATES AND ADVANCED UNDERGRADUATES**321. International Trade and Finance. (3-0). Credit 3. I**

A study of international economics, including the theory of international trade, foreign exchange, and the balance of payments; tariffs, exchange controls, and other barriers to trade; international investment; and contemporary problems of international disequilibrium. Prerequisites: Economics 203 and 204, or 205. Staff

*Graduate Advisor

323. Economic Analysis. (3-0). Credit 3. I

The importance of prices in directing production and distributing income under both competitive and monopolistic market situations is considered, along with a survey of the effects of governmental policies on the pricing system. Prerequisites: Economics 203 and 204, or 205. Staff

412. Public Finance. (3-0). Credit 3. II

A survey of all aspects of government finance. The main topics studied are public expenditures, taxation, public debt, and financial administration at federal, state, and local levels. Attention will be given to spending and borrowing policies of the government, and the role of taxation as an instrument of fiscal policy. Prerequisites: Economics 203 and 204, or 205. Mr. Morgner

433. Seminar. (1-0). Credit 1. II

Primarily for students majoring or minoring in economics. A study of methodology, scope, and philosophy of economic science, followed by individual investigation of some current economic problems. Prerequisite: Approval of the Head of the Department. Mr. Liebhafsky

435. Economics of Collective Bargaining. (3-0). Credit 3. I

Analysis of collective bargaining as an evolutionary process and the effect of negotiated wages and supplementary benefits upon labor mobility, productivity, managerial efficiency, and the economy as a whole. Prerequisite: Economics 318 or approval of the Head of the Department. Mr. Liebhafsky

437. Government and Labor Relations. (2-0). Credit 2. II

A study of court decisions and laws regulating and protecting labor in the interest of national welfare with attention to the social and economic environment in which such regulations were developed. Special attention is given to the major legislative acts of Congress and some of the state laws pertaining to labor relations, with some attempt to evaluate these in the light of a changing conception of labor relations. Prerequisite: Economics 318 or approval of the Head of the Department. Mr. Liebhafsky

440. Latin-American Trade. (3-0). Credit 3. II

A study of Latin-American trade and commercial policies, together with an analysis of the economic problems of this region. Prerequisite: Economics 321 or approval of the Head of the Department. Staff

443. Contemporary Economic Problems. (3-0). Credit 3. I

A study of current economic problems which lie within the following major areas of economic policy; economic stability, control of monopoly power, distribution of income, and international economic relations. Prerequisites: Economics 203 and 204, or 205. Mr. Chalk

FOR GRADUATES**601. History of Economic Thought. (4-0). Credit 4. I**

Primary emphasis is given to the Classical Period of 1776-1848, although a brief survey of pre-classical economic thought is made at the beginning of the course. Students are expected to read extensively in original sources, and special attention is devoted to the works of Smith, Malthus, West, Ricardo, and Mill. Prerequisite: Approval of the Head of the Department. Mr. Chalk

602. History of Economic Thought. (4-0). Credit 4. II

Following a general survey of the wage-fund controversy, an intensive study is made of marginal utility theory as developed by Menger, Jevons, Boehm Bawerk, etc., followed by the Neo-Classical period. The final portion of the course is devoted to the synthesis of classical and marginal utility theory found in Marshall's system. Prerequisite: Approval of the Head of the Department. Mr. Chalk

606. Economics of Labor. (4-0). Credit 4. II

A survey of theories of the labor movement is followed by analysis of wage and employment theories, the effect of union policies and practices upon wages and employment, and the role of unionism in economic stability. Prerequisite: Economics 318. Mr. Liebhafsky

607. Contemporary Economic Theory. (4-0). Credit 4. II

This is a survey of the more important contributions to economic thought which have been made during the last generation. The current writings of important contemporary economists are read and evaluated. Prerequisite: Economics 323. Staff

611. Government Fiscal Policy. (4-0). Credit 4. I

This course concerns the development of modern national income analysis and the role of fiscal policy in promoting economic stability. The conceptual problems of measuring national income are considered, analytical systems explaining the determination of national income are surveyed, and contemporary policy recommendations for the maintenance of full employment without inflation are discussed. Prerequisite: Economics 311 or 412. Mr. Morgner

613. International Economic Policies. (3-0). Credit 3. II

A critical examination of governmental policies toward international trade both at home and abroad; includes study of the role of the individual and the state in foreign trade; examines export and import controls, exchange control and exchange stabilization funds; considers tariff and rehabilitation policies of the government and their relation to foreign trade. Prerequisite: Economics 321. Mr. Delaplane

685. Problems. Credit 1 to 3 each semester. I, II, S

Individual problems not related to a thesis or dissertation. Prerequisites: Graduate classification with major or minor in economics; approval of the Head of the Department. Staff

691. Research. Credit 1 or more each semester. I, II, S

Thesis research. Staff

Department of Education and Psychology

E. C. ELLIS, W. P. EWENS, G. P. PARKER* (Head), W. A. VARVEL, G. B. WILCOX

The graduate courses in education have been designed to serve: (1) those students who plan administrative careers in the field of public education and wish to meet the requirements of local boards of education and the Texas Education Agency, which make it imperative that the prospective principals, supervisors, counselors, superintendents, or visiting teachers have at least the certificate of approval; (2) school men actively engaged in school work who are endeavoring to raise their professional efficiency; (3) industrial arts education majors, agricultural education majors, sociology majors and others in their minor studies program because of the close relationships existing between their major fields of work and that of education.

The areas of work in public school education given greatest emphasis are administration, counseling, curriculum and instruction, and supervision. The department is fortunate that the staff members have excellent training acquired while actively engaged in public school services.

*Graduate Advisor

EDUCATION

FOR GRADUATE AND ADVANCED UNDERGRADUATES

421. History and Philosophy of Education. (3-0). Credit 3. I, S

An evaluation of the educational achievements of the various nations and people of the western world; the development of the social, religious, political, and cultural beliefs and attitudes that underlie American education today. Prerequisite: Six hours of education. Mr. Wilcox

426. Tests and Measurements. (3-0). Credit 3. II, S

The development of scientific measurement. The fundamental principles of sound measurement and an intensive study of the methods of appraising achievements of instructional objectives. Primary emphasis upon methods of constructing teacher-made, objective tests and techniques for improving other types of written examinations. Prerequisite: Education 321 or the equivalent. Mr. Ewens, Mr. Varvel

427. Principles of Guidance. (3-0). Credit 3. I, S

Introduction to the field of guidance and student personnel work. Treatment of principles underlying the aims, methods, and instruments employed in counseling and guidance. Attention to relationship of instruction and guidance. Prerequisite: Psychology 301 or a course in general psychology. Mr. Ewens

436. Organization and Administration of the Elementary School. (3-0). Credit 3. S

The functional study of the participation in, and the organization and administration of, the elementary school. Designed to meet the needs of elementary school principals, supervisors, teachers, and school superintendents. Prerequisite: Twelve hours of education. Mr. Ellis

437. Organization and Administration of the Secondary School. (3-0). Credit 3. II, S

The functional study of the participation in, and the organization and administration of, the secondary school. Designed to meet the needs of secondary school principals, supervisors, teachers, and school superintendents. Prerequisite: Twelve hours of education. Staff

439. Educational Statistics. (3-0). Credit 3. I, S

Statistical techniques for classroom teachers, principals, students of psychology and education, and educational research workers. Problems originating in classrooms, offices of principals, laboratories of educational investigators will be used for illustrative materials and exercises. Not open to students who have received credit for any other course in statistics. Prerequisite: Six hours of advanced education. Mr. Ewens, Mr. Varvel

443. Elementary School Curriculum. (3-0). Credit 3. S

Curriculum problems as they relate to the growth, development, and adjustment of the child in the elementary school. Emphasis given to the study of curriculum materials and to the resource unit approach with the modified elementary curriculum structure. Prerequisite: A previous course in elementary school methods. Mr. Ellis

444. Secondary School Curriculum. (3-0). Credit 3. I, S

Inquiry into current curriculum practices and their backgrounds, basis for curriculum reorganization, emphasis upon the resource unit approach within the modified curriculum structure. Prerequisite: Education 321 or the equivalent. Mr. Ellis, Mr. Parker

FOR GRADUATES

601. College Teaching. (2-0). Credit 2. I

Conceptions of higher education underlying typical programs including General Education, the learning process, and effective use of techniques and instrumentalities of classroom instruction. Prerequisite: Graduate classification. Staff

607. Programs and Procedures in Supervision. (3-0). Credit 3. II, S

Designed for teachers, supervisors, and administrators. Deals with the philosophy, organization, and administration of supervision of both the elementary school and the secondary school. Prerequisites: Education 321, 444, or the equivalent. Mr. Ellis, Mr. Parker

608. Administration of Local School Finance. (3-0). Credit 3. II, S

A study of school funds on the local school level; sources, budgeting, systems of accounting and reporting. Supply management as related to school efficiency. Mr. Parker, Mr. Wilcox

609. Public School Laws. (3-0). Credit 3. II, S

A review of the constitutional provisions, statute laws, court decisions, and regulations governing the public schools, with special reference to Texas. Mr. Parker, Mr. Wilcox

610. Pupil Accounting. (3-0). Credit 3. I

A study of devices to record and improve census taking and attendance; classification and promotional schemes; school record system; school reports and pupil appraisal studies; marking systems. Mr. Parker, Mr. Varvel

613. The School Plant. (3-0). Credit 3. II, S

A study of plans for determining the extent and character of present and future building and equipment needs of a school unit; efficiency of present plant; operation and maintenance; planning the building program. Mr. Parker, Mr. Wilcox

615. Structural Organization and Administration. (3-0). Credit 3. I, S

A study of educational administration in the United States through an analysis of the nature of the educational function, consideration of the implications of democracy, and the legal relations of formal education to the democratic state. Emphasis will be given to the structural organization and administration of state and local school systems. Prerequisites: Education 437; graduate classification. Mr. Parker

616. Administration of Staff Personnel. (3-0). Credit 3. I, S

A study of selection, salary schedules, tenure, and promotion of teachers, including in-service training, efficiency records and ratings. Mr. Parker

623. Standardized Tests and Measurements. (3-0). Credit 3. I

Use of standardized tests in instruction and guidance. Study of various tests of achievement, aptitude, interest, and personality. Methods of construction, experimental trial, and standardization of published tests. Interpretation of test results. Prerequisite: Education 426, or 439, or the equivalent. Mr. Ewens, Mr. Varvel

624. Individual Testing. (2-3). Credit 3. I

Practicum in administration and interpretation of the Stanford-Binet and Wechsler-Bellevue intelligence tests. Introduction to individual tests of personality. Prerequisites: Education 426 or 439, 623 or registration therein. Mr. Varvel

625. Practicum in Secondary Education. (2-3). Credit 3. I

A course designed for secondary school teachers in which a study is made of current problems in the secondary school. The student, with the advice of the instructor, will select an individual problem from the following areas: planning, including the school survey; curriculum development; life adjustment education; education for out-of-school youths and adults; evaluative criteria; counseling; supervision; citizens' committee for the public schools. Prerequisites: Individual approval; teaching experience. Staff

626. Practicum in Secondary Education. (2-3). Credit 3. II

This is a continuation of Education 625. The student selects an individual secondary school problem different from the one used for Education 625. Staff

627. Practicum in Elementary Education. (2-3). Credit 3. I

A course designed for elementary school teachers in which a study is made of current problems of the elementary school. The student, with the advice of the instructor, will select an individual problem from the following areas: evaluation; a detailed study of testing programs; curriculum development in specific areas; health and safety education; child growth and development; improving teaching techniques; counseling; supervision; school and community programs. Prerequisites: Individual approval; teaching experience. Staff

628. Practicum in Elementary Education. (2-3). Credit 3. II

This is a continuation of Education 627. The student selects an individual elementary school problem different from the one used for Education 627. Staff

629. Practicum in Counseling and Guidance. (2-3). Credit 3. II

Supervised practice in individual counseling and group guidance. Cases assigned in Basic Division and local public schools. Prerequisites: Education 624, 631. Mr. Ewens

631. Techniques of Counseling. (3-0). Credit 3. II

Methods of gathering, analyzing, and interpreting case data in counseling. Analysis of dynamics of counselor-counselee relationship. Interviewing techniques. Use of test results in counseling. Prerequisites: Education 427 or 635, 623; Psychology 634. Mr. Ewens

632. Educational and Occupational Information. (3-0). Credit 3. II, S

Sources, classification, and analysis of educational and occupational information. Occupational trends; local occupational surveys. The use of occupational information by the classroom teacher and the guidance specialist. Mr. Ewens

633. Methods of Group Guidance. (3-0). Credit 3. I, S

Methods and practices in group guidance. The homeroom, classroom, and school clubs as opportunities for guidance. Prerequisite: Education 427 or 635. Staff

635. Organization and Administration of Pupil Personnel Services. (3-0). Credit 3. I, S

A course for administrators, counselors, supervisors, and teachers designed to help them develop an understanding of the role of pupil personnel services; responsibility for the techniques of evaluating the program of pupil personnel services. Prerequisite: Graduate classification. Mr. Ewens

637. Advanced Elementary School Methods. (3-0). Credit 3. S

A study of teaching methods, devices, and techniques of learning-teaching situations on the elementary school level. Prerequisite: Twelve hours in elementary education or an elementary school certificate. Mr. Ellis

638. Advanced Secondary School Methods. (3-0). Credit 3. II, S

A study of teaching methods, devices, and techniques of learning-teaching situations on the secondary level. Prerequisite: Twelve hours of secondary education or a secondary school certificate. Mr. Ellis, Mr. Parker

639. Processes in Educational Leadership. (3-0). Credit 3. II, S

An analysis of the skills and techniques of the administrator in the modern school, with emphasis on democratic leadership, teacher-administrator relationships, group processes, and evaluation of the administrative programs. Prerequisite: Twelve hours of advanced education. Mr. Varvel

640. School-Community Relationships. (3-0). Credit 3. II, S

Considers the total educational and social patterns of living which exist in any community. The home, the school, the church, clubs, recreation centers, and all agencies of the community are conceived collectively as dominating educational influences in the life of the child. Prerequisites: Twelve hours of advanced education; graduate classification. Mr. Parker

681. Seminar. (1-0). Credit 1. II

Problems pertinent to the superintendent, principal, counselor, supervisor, and visiting teacher are selected. Recent developments and research in the different areas will be presented. Prerequisites: Eighteen hours of advanced education; approval of the Head of the Department. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

A directed individual study of a selected problem in the field of education. Prerequisite: Graduate classification in education. Staff

691. Research. Credit 1 or more each semester. I, II, S

Research for thesis. Staff

PSYCHOLOGY**FOR GRADUATES AND ADVANCED UNDERGRADUATES****403. Dynamics of Human Behavior. (3-0). Credit 3. II**

The motivation of behavior and the mechanisms of adjustment to conflict. Types of maladjustment and their causation. The development and integration of the personality. Theories of personality. Prerequisites: Psychology 207 or 301 or 303, and 305 or graduate classification in education or sociology. Mr. Varvel

FOR GRADUATES**634. Principles of Human Development. (3-0). Credit 3. I, S**

Biological, psychological, and cultural interrelationships in human development. Emphasis upon principles and methods as illustrated in research and theoretical contributions. Experiences in procedures of child study. Prerequisite: Graduate classification. Mr. Varvel

Department of Electrical Engineering

E. H. ANDREW, JR., H. C. DILLINGHAM*, G. D. HALLMARK (Head), L. M. HAUPT, JR.*, M. C. HUGHES, W. T. MATZEN, S. O. NAVARRO, M. G. REKOFF, JR., N. F. RODE*, R. P. WARD

The graduate program in electrical engineering provides suitable course offerings for students whose major interest is in either the electronics or the power field. Opportunity is afforded for independent laboratory investigations in either field. The facilities include a large modern AC network calculator provided with two control desks which make it possible to have two separate studies in progress at the same time. An electronic analog computer has been built in the department, and is available for investigations in all fields, as is a Model 650 IBM digital computer. A Westinghouse Mass Spectrometer with recorder is another major facility.

*Graduate Advisor

The electronics laboratories, in addition to usual devices, contain some radar equipment and a complete television transmitter. The machinery laboratories are amply provided with all the standard and many special machines. The department is well equipped as regards instrumentation in all of the various laboratories.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

315. Alternating Currents. (3-3). Credit 4. I, II

A study of the fundamentals of the steady-state characteristics of sinusoidal alternating current circuits, both single and three phase. The practice consists of laboratory work designed to supplement the classroom theory. Prerequisites: Electrical Engineering 201; Mathematics 307 or registration therein. Mr. Haupt, Mr. Ward

401. Alternating Current Machinery. (3-0). Credit 3. I

A graphical and mathematical study of alternating current machines, including transformers and synchronous generators and motors. Prerequisites: Electrical Engineering 316, registration in 403; Mathematics 308. Mr. Hughes, Mr. Rode, Mr. Ward

402. Alternating Current Machinery. (3-0). Credit 3. II

A continuation of the study of synchronous machines; asynchronous machines, polyphase and single phase motors; rectifiers and converters and control equipment. Prerequisites: Electrical Engineering 401, 403; registration in 404. Mr. Hughes, Mr. Rode, Mr. Ward

404. Alternating Current Laboratory. (0-6). Credit 2. II

A continuation of the laboratory study of alternating current machines. Prerequisites: Electrical Engineering 401, 403, registration in 402. Mr. Hughes, Mr. Rode

406. Electric Power Distribution and Transmission. (2-2). Credit 3. II

Lectures and recitations on the transmission and distribution of power by electrical methods including symmetrical components. Detailed calculations of line constants, lightning phenomena, switching surges, and cost estimates of transmission and distribution systems. Prerequisite: Electrical Engineering 415. Mr. Rode

415. Transmission Networks. (2-2). Credit 3. I

An analytical study of the theory of transmission lines and impedance matching devices. Hyperbolic-function treatment is generalized to apply to power, electronic, and communication circuits. The laboratory will consist of group problems and demonstrations. Prerequisites: Electrical Engineering 316; Mathematics 308. Mr. Dillingham, Mr. Rode

419. Electronic Circuits. (3-3). Credit 4. I

A study of the basic circuits used in radio, television, and computers. An analytical study of modulators, demodulators, oscillators, and amplifiers. The laboratory work covers experimental studies of the above devices. Prerequisites: Electrical Engineering 316, 320; Mathematics 308. Mr. Dillingham

428. Communication Circuits. (2-3). Credit 3. I, II

A study of the engineering principles used in wire line communications, including telephone and telegraph systems, transmission theory, inductive interference, networks, filters, loading, repeater and carrier systems. Laboratory investigations include transmission measurements on artificial lines involving the use of vacuum tube measuring devices and impedance bridges. Prerequisite: Electrical Engineering 415 or registration therein. Mr. Hallmark, Mr. Dillingham

441. Symmetrical Components of Polyphase Circuits. (3-0). Credit 3. II

The solution of current, voltages, and power flow during fault conditions on a power transmission system by the application of a method of symmetrical components. Prerequisite: Electrical Engineering 308 or 401. Mr. Haupt, Mr. Rode, Mr. Andrew

446. Television. (2-3). Credit 3. II

An introduction to the principles and practice of television engineering; image analysis, television camera action, synchronizing circuits, video amplifiers, receivers, laboratory study of transmitters and receivers. Prerequisite: Electrical Engineering 419. Staff

451. Radiation and Propagation. (3-0). Credit 3. I

Application of vector analysis and Maxwell's equations to the study of electromagnetic waves, current and voltage distribution in antennas, electromagnetic radiation, field distribution, directional antennas, propagation of electric waves; ionosphere, ground wave, sky wave, direct wave, fading characteristics. Prerequisites: Electrical Engineering 322; Mathematics 308. Mr. Hallmark

452. Ultra High Frequency Techniques. (2-3). Credit 3. II

An introduction to the theory and practice of ultra high frequency radio wave generation, transmission and radiation. Development of Maxwell's equations and their application to transmission of electrical energy in wave guides. Prerequisite: Electrical Engineering 419. Mr. Hallmark

457. Principles of Digital Computers. (3-2). Credit 4. I

Organization and internal operation of digital computers; binary arithmetic; number systems; Boolean algebra; computer hardware; programming and coding elementary problems; basic computer circuits. Prerequisite: Senior classification. Staff

458. Programming of Digital Computers. (3-2). Credit 4. II

Operation of digital computer; flow charts; sub-routines; library programs; floating point; multiple precision; error analysis; optimum coding; symbolic coding; interpretive coding; automatic coding; practical applications. Prerequisite: Senior classification. Staff

501. Theory and Application of Electron Tubes. (3-3). Credit 4. I, S

This course is designed to familiarize the students of all engineering fields with basic electron tube phenomena and their applications to electrical instrumentation, particularly strain gauges, amplifiers, cathode ray oscilloscopes, electronic records, nuclear counters, pulse forming devices, oscillators, and associated equipment in the electrical field of measurements. Mr. Dillingham, Mr. Hallmark

FOR GRADUATES**601.* Advanced Alternating Currents. (3-4). Credit 4. I**

Wave analysis; mechanical and electrical wave analyzers; non-linear circuits; multiple winding transformer theory; transient solution of general network. The study of transients with oscillographs. Mr. Rode

602.* Advanced Alternating Currents. (3-4). Credit 4. II

Steady-state and transient solution of recurrent networks, operational calculus methods of solution of circuits with lumped and distributed constants, non-linear circuits. Mr. Rode

*In the summer session these courses may be divided into two parts, a and b, each with two hours of credit.

605. Servomechanisms. (4-0). Credit 4. I

A study of the theory of feed back control systems with special emphasis on the synthesis of such systems. Includes the transient and steady-state behavior of electrical, mechanical, and hydraulic systems. Prerequisites: Mathematics 308; graduate classification. Mr. Andrew

606. Servomechanisms. (3-3). Credit 4. II

A study of feed back control system components and their power requirements; and sample data, on-off, and other discontinuous control systems. Prerequisite: Electrical Engineering 605. Mr. Andrew

607.* Alternating Current Circuits and Machines. (3-4). Credit 4. I

The study of transient conditions in electrical machines. Mr. Rode

611.* Symmetrical Components Applied to Electrical Engineering. (3-4). Credit 4. II

The solution of unbalanced electrical circuits by means of symmetrical components; the study and measurement of machine constants by means of the oscillograph. Mr. Hughes, Mr. Haupt, Mr. Rode

624.* Electronic Circuits for Instrumentation and Computation. (3-3). Credit 4. II

Theory, analysis, and design of the electronic circuits used in instrumentation and computation. DC amplifiers, operational amplifiers, and function generators are included. Problems of drift compensation in DC amplifiers and closed-loop stability in multi-stage amplifiers are treated in detail. Prerequisites: Electrical Engineering 419; Mathematics 601. Mr. Dillingham

626.* Introduction to Electron Tube Design. (4-0). Credit 4. I

The motion of ions in electric and magnetic fields, electron emission, and conduction through gases are studied. The applications in mass spectrometry, electron optics, and electron tube design are considered. Mr. Hallmark

628.* Theory and Design of Feedback Networks. (4-0). Credit 4. I

A study of regeneration and feedback theory with emphasis on circuit analysis methods suitable for treatment of these topics. Prerequisites: Electrical Engineering 601; Mathematics 601 or the equivalent. Mr. Hallmark

642.* Transistors. (3-3). Credit 4. I, S

Theory of junction triodes, voltage, current, power and frequency limitations. Small signal parameters and equivalent circuits for transistors; analysis and design of circuits at both small and large signal levels. Prerequisite: Electrical Engineering 419. Mr. Navarro

653.* Digital Computer Circuitry. (3-3). Credit 4. I, S

Switching networks; Boolean algebra applied to computer components. Adders, subtractors, and accumulators; multipliers and dividers. Binary and decimal counters. The digital differential analyzer. Memory systems and control circuits. The laboratory will be partly conducted in the digital computer laboratory of the college. Prerequisites: Electrical Engineering 415, 419, or approval of the Head of the Department. Mr. Navarro

685. Problems. Credit 1 to 4 each semester. I, II

Research problems of limited scope designed primarily to develop research technique. Staff

691. Research. Credit 1 or more each semester. I, II

Research for thesis or dissertation. Staff

*In the summer session these courses may be divided into two parts, a and b, each with two hours of credit.

Department of Engineering Drawing

W. F. ADAMS, J. G. MCGUIRE*, J. P. OLIVER, W. E. STREET* (Head)

The graduate courses in engineering drawing have as their main objectives the preparation of men in the profession of teaching, both high school and college; for the preparation of men specializing in industrial graphic methods; and for scientific investigation and research in science and engineering.

The Engineering Drawing Department is well equipped with drafting machines, lettering devices, models, reproduction equipment, projectors and other visual aids, and a complete library of the field of graphics.

FOR GRADUATES

601. Advanced Industrial Drawing. (2-3). Credit 3. I, S

Problems pertinent to all industrial fields. Solutions involve projections, primary auxiliary views, successive auxiliary views, revolutions, flat pattern layouts, perspective, and shades and shadows. Use of drafting machines and other special drafting equipment. Appropriate for high school and college teachers. Prerequisites: Engineering Drawing 106 or equivalent. Mr. Street

603. Advanced Machine Drawing. (1-6). Credit 3. II, S

Conventional practices, dimensioning, fastenings, machine and pictorial sketching. Empirical design including problems of stuffing boxes, piping, shafting, gears, cams, ship and aircraft parts. Use of special drafting equipment, such as drafting machine, section liner, proportional dividers, erasing machines, light table, and mechanical lettering guides. Methods of reproduction. Appropriate for high school and college teachers. Prerequisite: Engineering Drawing 106 or equivalent. Mr. Street

605. Spherical Projections.** (2-0). Credit 2. I, S

Advanced graphics including recent developments in drawing, review of graphical research, and related fields. Prerequisites: Engineering Drawing 106 or the equivalent. Mr. Oliver

606. Stereographic and Clinographic Projections.** (2-0). Credit 2. II, S

Advanced graphics including recent developments in drawing, review of graphical research, and related fields. Prerequisite: Engineering Drawing 106 or the equivalent. Mr. Oliver

607. Descriptive Geometry for Teachers.** (4-0). Credit 4. II, S

Fundamental concepts of descriptive geometry. The design and organization of problems and teaching devices for college teachers. Prerequisites: Engineering Drawing 106 or the equivalent. Mr. Street

611. Technical Illustration.** (3-3). Credit 4. I, S

Axonometric projection including shading. Design and construction of display layouts. Commercial and technical illustrating. Prerequisites: Engineering Drawing 106 or the equivalent. Mr. McGuire

*Graduate Advisor

**Primarily for graduate students interested in education. Not available for major or minor work toward an engineering degree except by permission of the Dean of the Graduate School.

Department of English

J. P. ABBOTT, J. Q. ANDERSON, R. H. BALLINGER, A. L. BENNETT, F. E. EK FELT,
K. E. ELMQUIST, C. A. GREER, L. F. HAUER, J. Q. HAYS, E. D. HEDGCOCK, C. D.
LAVERY, S. S. MORGAN (Head), E. E. STOKES, JR

FOR GRADUATES AND ADVANCED UNDERGRADUATES

309. The English Language. (3-0). Credit 3. I

Survey of the grammatical structure, vocabulary, and history of the English language, with brief discussion of related languages. Examples of the study of literature and writing from the standpoint of language. Prerequisites: Two courses in sophomore English. (Offered in 1959-60 and in alternate years thereafter.) Mr. Elmquist

310. Phonetics and Pronunciation. (3-0). Credit 3. II

Brief introductory discussion of the nature of language and of language study. Detailed study of the formation of English sounds, of usage in pronunciation, and of phonetic and phonemic principles. Prerequisites: Two courses in sophomore English. (Offered in 1958-59 and in alternate years thereafter.) Mr. Elmquist

321. Nineteenth Century Literature (Romantic). (3-0). Credit 3. I

A study of the intellectual tendencies of the nineteenth century as reflected in the poetry of Wordsworth, Byron, Shelley, Keats, and others. Prerequisites: Two courses in sophomore English. Mr. Morgan

322. Nineteenth Century Literature (Victorian). (3-0). Credit 3. II

A continuation of the study in nineteenth century thought as reflected in the writings of Tennyson, Browning, Arnold, and other Victorians. Prerequisites: Two courses in sophomore English. Mr. Morgan

327. American Literature to 1870. (2-0). Credit 2. I

A study of American literature from the Colonial Period through the Civil War, with attention to the intellectual and social movements reflected in that literature. Special emphasis is placed upon the evolution of the democratic ideal as it is pictured in American literature. Prerequisites: Two courses in sophomore English. Mr. Hays, Mr. Laverty, Mr. Anderson

328. American Literature from 1870 to 1920. (2-0). Credit 2. II

A study of American writing from Whitman and Mark Twain to Frost and Dreiser. Limited to students who have made an average of C or better in the prerequisite courses. Prerequisites: Two courses in sophomore English. Mr. Ballinger, Mr. Hays, Mr. Laverty

340. Modern Drama. (3-0). Credit 3. II, S

A study of representative plays (in translation) by such dramatists as Hauptmann, Rostand, and Pirandello on the Continent, and Pinero, Shaw, Synge, O'Neill, and Maxwell Anderson in England and America. Prerequisites: Two courses in sophomore English. Mr. Hedgcock, Mr. Morgan

350. Modern Literature. (3-0). Credit 3. I

A study of British and American novelists, poets, and dramatists from about 1920 to the present, with lectures on the social and intellectual background. Among the authors studied are Galsworthy, Aldous Huxley, Lewis, Wolfe, Hemingway, Steinbeck, O'Neill, Eliot, Millay, and Jeffers. Prerequisites: Two courses in sophomore English. (Offered in 1959-60 and in alternate years thereafter.) Mr. Stokes, Mr. Southwell

428. The Novel in English. (3-0). Credit 3. I

A study of the novel in English in the eighteenth, nineteenth, and early twentieth centuries. Lectures; readings in the works of representative novelists such as Fielding, Austen, Scott, Dickens, Thackeray, Eliot, Hardy, Conrad, Galsworthy, Woolf, Forster, Melville, James, Dreiser. Prerequisites: Two courses in sophomore English. (Offered in 1958-59 and in alternate years thereafter.) Mr. Ekfelt

461. Teaching of Language and Composition. (3-0). Credit 3. S

A study of administrative and teaching problems involved in high school and college courses in composition. The organization and presentation of courses designed to improve student writing; various points of view toward language study held by teachers and students of linguistics; papers written by students and graded and criticized by instructor; supervised practice in grading and criticizing of student writing; the organizing of the curriculum in English from the grades to college. The course is intended for students expecting to teach English, for teachers of other subjects, and for principals and superintendents confronted with problems of organizing and administering the English program. Prerequisite: Senior classification or approval of instructor. Mr. Hays, Mr. Hedgcock, Mr. Morgan

485. Problems. Credit 1 to 3. I, II, S

Individual supervision; no class meetings. Readings designed for the student with a major or a minor in English and selected to round out his over-all knowledge of literature and the criticism of literature. The selection of books will be determined for each student separately, and the students will read each book under the supervision of a professor in the Department of English who is a specialist in the field embracing the book. There will be written reports on the readings and a semester examination. Prerequisites: Eighteen hours of English. Mr. Ekfelt

Department of Entomology

See also Animal Parasitology.

J. C. GAINES* (Head), R. L. HANNA, D. R. KING, V. A. LITTLE, M. A. PRICE, N. M. RANDOLPH, H. J. REINHARD

Work is offered for advanced degrees in the various phases of entomological science including taxonomy, morphology, parasitology, physiology, toxicology, economic entomology and apiculture. Satisfactory facilities are available for research in these various fields of study including a well equipped field laboratory. Precision spraying and dusting equipment and constant temperature control apparatus are available for research in parasitology, physiology, and toxicology. A large working collection of insects and an excellent entomological library are available for research in taxonomy and morphology.

Prerequisite to major graduate work is the completion of no less than two years of approved entomological training, except that for a part of this requirement credit in certain other biological sciences may be substituted. Comprehensive courses in the biological sciences and general chemistry (and in most cases organic chemistry) are required of all students. Specific requirements, in addition to the elementary undergraduate course pertaining to various lines of major work, are dependent upon previous training and professional experience.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

301. Systematic Entomology. (2-3). Credit 3. I

A systematic study of the orders and families of insects, their distinguishing characteristics, and the habitat and feeding habits of representative species. The preparation of insect collection and the use of keys for identification are emphasized in practice. Prerequisite: Entomology 201 or equivalent. Mr. Reinhard

302. Systematic Entomology. (2-3). Credit 3. II

A continuation of Entomology 301, including orders and families of insects not included in Entomology 301. Prerequisite: Entomology 301. Mr. Reinhard

*Graduate Advisor

305. Insect Morphology. (2-3). Credit 3. I

General morphology of typical insects with special emphasis on those structures of particular importance in systematic and applied entomology. Prerequisite: Entomology 201 or equivalent. Mr. King

306. Insect Physiology. (2-3). Credit 3. II

Internal anatomy and principles of physiology as applied to insects. Prerequisite: Entomology 305. Mr. King

401. Principles of Insect Control. (2-3). Credit 3. I

A study of both applied and natural controls emphasizing the uses, practical application, the physical and chemical properties of the more important insecticides. Prerequisite: Entomology 201. Mr. Gaines

402. Agricultural Pests. (2-3). Credit 3. II

The biological developments, habits, and control of insect pests attacking farm crops, including livestock. Prerequisite: Entomology 201. Mr. Randolph

FOR GRADUATES**601, 602. Systematic Entomology. (3-3). Credit 4 each semester. I, II**

A taxonomic study of the orders, families, and sub-groups of the class Hexapoda; a study of the International Rules of Nomenclature. A special study of some particular group of insects is required in practice. Prerequisite: Entomology 302. Mr. Reinhard

607. Economic Entomology. (3-3). Credit 4. I, S

This course is designed chiefly for workers in vocational agriculture and the Extension Service. It includes studies of agricultural pests, their biologies, damage as determined by making infestation records and the use of control measures. Insecticides and methods of application are also considered. Prerequisite: Approval of Head of Department. Mr. Little

608. Economic Entomology. (3-3). Credit 4. II

A detailed study of insect pests, including identification, distribution, principles and methods of natural, cultural, and chemical controls; literature and research methods. Prerequisite: Entomology 401 or 402. Mr. Little

613, 614. Morphology. (3-3). Credit 4 each semester. I, II

A detailed study of anatomical structures of insects. Prerequisite: Entomology 305. Mr. King

615. Insect Physiology. (3-3). Credit 4. I

A study of the physiology of respiration, circulation, digestion, and excretion; and mechanical and chemical senses of insects considered. Prerequisite: Entomology 306 or equivalent. Mr. Hanna

617, 618. Medical Entomology. (3-3). Credit 4 each semester. I, II

The taxonomy and biology of parasitic insects, ticks, mites and their role in the causation and transmission of diseases affecting man and domestic animals. Prerequisite: Entomology 208 or equivalent. Mr. Price

619. Insect Toxicology. (3-3). Credit 4. II

Chemical compounds which possess toxic properties; actions of poisons on insects; evaluation of insecticides in the laboratory and field; and mathematical analysis of data. Prerequisite: Entomology 615. Mr. Hanna

685. Problems. Credit 1 to 4 each semester. I, II, S

Individual problems or research not pertaining to a thesis or dissertation. Prerequisites: Graduate classification with major or minor in entomology; approval of Head of Department. Staff

691. Research. Credit 1 or more each semester. I, II, S

Research problems on taxonomy, life histories, biological control, ecology, physiology, or toxicology of insecticides. Prerequisite: Graduate classification. Staff

Department of Floriculture and Landscape Architecture

A. F. DeWERTH* (Head)

FLORICULTURE

The field of research in floriculture and ornamental horticulture affords excellent opportunities for original work. Studies in the propagation, nutrition, culture, harvesting, grading, marketing, and improvement of ornamental plants may be undertaken. Also, monographic studies of ornamental groups and their adaptability to use are suitable problems for investigation.

Many of the problems in this field are basically those of plant response in relation to environment and students should have adequate preparation in botany, plant physiology, genetics, agronomy, plant pathology, entomology, chemistry, and elementary floriculture or horticulture.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

424. Propagation of Ornamental Plants. (2-2). Credit 3. II

Specialized study of plant propagation with emphasis on the physiological and anatomical considerations involved and the importance of their application to the commercial propagation of ornamental plants. Prerequisite: Plant Physiology and Pathology 313. (Offered in 1959-60 and in alternate years thereafter) Mr. DeWerth

429. Greenhouse Crop Production. (3-3). Credit 4. I

The application of scientific developments to the principles and practices involved in the production, harvesting, and grading of crops grown in greenhouses and other forcing structures. (Offered in 1958-59 and in alternate years thereafter) Prerequisites: Plant Physiology and Pathology 301, 313. Mr. DeWerth

430. Nursery Crop Production. (3-3). Credit 4. II

The application of scientific developments to the principles and practices involved in the production, harvesting, and grading of plants grown in the modern nursery. (Offered in 1959-60 and in alternate years thereafter) Mr. DeWerth

FOR GRADUATES

609, 610. Experimental Floriculture. (1-6). Credit 3 each semester. I, II

Specialized study of the genera, species, varieties and clones of woody and herbaceous ornamental plants, including form, structure, identification and adaptability to environmental conditions and climatic variations in the Southwest. Water, temperature, light, and soil relations of ornamental plants and their modification by management practices. Specific problems of management will be studied under field and greenhouse conditions. (Offered in 1959-60 and in alternate years thereafter) Mr. DeWerth

685. Problems. Credit 1 to 4 each semester. I, II, S

This course is for students who desire to work out special problems. Students will elect work in their desired subjects after a conference with instructor in charge. Prerequisites: Genetics 301; Plant Physiology and Pathology 301, 313; approval of Head of Department. Mr. DeWerth

691. Research. Credit 1 or more each semester. I, II, S

Research for thesis or dissertation. Mr. DeWerth

Food Technology

Programs may be developed from the offerings of various departments and schools which serve the needs of a Food Technologist. Students desiring such a program should consult the Dean of the Graduate School and the appropriate departmental representative.

*Graduate Advisor

Department of Genetics

See also **Animal Breeding, Physiology of Reproduction, and Plant Breeding.**

R. O. BERRY, H. T. BLACKHURST, C. L. BROWN, META S. BROWN, T. C. CARTWRIGHT, C. B. GODBEY (Head), CHARLES LAMOTTE, C. F. LEWIS, J. H. QUISENBERRY, R. G. REEVES, T. R. RICHMOND*, J. S. ROGERS, R. R. SHRODE*, B. L. WARWICK

Training in both theoretical and applied genetics is provided for by the following group of associated departments: Agronomy, Animal Husbandry, Dairy Science, Poultry Science, Floriculture and Landscape Architecture, Genetics, and Horticulture. Students should consult the Dean of the Graduate School, who will advise them concerning the department that can best administer their program.

Laboratory facilities are available for research with various species of plants and animals. Active investigations are in progress on most of the agronomic and horticultural crops in this region and also with sheep, swine, poultry, and cattle.

Students may be encouraged to participate in genetical and cytogenetical research now in progress in corn, cotton, and species related to these two crops. Species, genetic stocks, and hybrids are maintained for these phases of research. In this work cytogenetics and cytotaxonomy of species hybrids are emphasized.

In the animal field, progress is being made with studies of inheritance of economic characters in large animals and poultry. Students interested in both theoretical and practical aspects of animal and poultry breeding are given opportunity to do research on poultry and large animal breeding projects as well as research of more theoretical nature using laboratory animals.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

301. Genetics. (3-2). Credit 4. I, II, S

Fundamental principles of genetics: variation, heredity, the physical basis of Mendelian inheritance, the expression and interaction of genes, linkage, sex linkage and mutation. Laboratory includes demonstrations of Mendelian ratios with *Drosophila* and an introduction to biometrical methods. Prerequisite: Biology 101 or 107. Staff

304. Plant Breeding. (3-2). Credit 4. II

The improvement of crops by hybridization and selection. Special breeding methods and techniques applicable to naturally self-pollinated, cross-pollinated, and asexually reproduced plants. Prerequisite: Genetics 301. Staff

306. Animal Breeding. (2-2). Credit 3. I, II

Genetics as applied to the problems of the animal breeder. Genetic and phenotypic effects of selection. Comparison of various selection methods such as mass selection, family selection, progeny and sib testing. Selection indexes. Systems of mating such as grading, cross-breeding, inbreeding, linebreeding, outbreeding, and random mating. Genetic analysis of pedigrees. Prerequisite: Genetics 301. Mr. Shrode

406. Biometry—Experimental Technique. (2-3). Credit 3. I, II, S

The purpose of this course is to acquaint the student with the common methods of analyzing biological data. The planning, analyzing, and interpreting of experiments in plant and animal sciences. A study of measures of type, variability, linear relationship, reliability, goodness of fit, analysis of variance. Mr. Godbey

*Graduate Advisor

Poultry Science 414. Poultry Breeding. (2-2). Credit 3. I

The basic principles of poultry breeding. The inheritance of characters of economic importance. The records essential for a sound breeding program; the selection of breeders on the basis of records and standard bred characteristics. Practice includes taking records on breeding birds, interpreting the records, and the techniques involved in pedigree breeding. Prerequisite: Genetics 301. Mr. Krueger

FOR GRADUATES**603. Genetics. (3-0). Credit 3. I**

Advanced study of genetics with special attention focused on the evidence supporting the principles of heredity. Historical development of Mendelian genetics and the chromosome theory of heredity, statistical treatment of qualitative genetics, detection and measurement of linkage, extra nuclear inheritance, mutation and position effect, introduction to biochemical and developmental genetics. Prerequisite: Genetics 301; approval of the instructor. Staff

604. Genetics Laboratory. (0-3). Credit 1. I

Inheritance studies principally with *Drosophila* including laboratory techniques and analysis of data. Arranged to complement Genetics 603 and required for genetics majors. Staff

605, 606. Biometry. (3-3) Credit 4 each semester. I, II

A study of the elementary statistics; Chi-square; design of simple experiments; analysis of variance, covariance; design and analysis of complex experiments. This course is designed to meet the needs of students majoring in either plant or animal science. Mr. Godbey

612. Plant Genetics. (3-3). Credit 4. II

Specialized study of plant genetics and plant breeding with emphasis on quantitative inheritance, heterosis, induced mutation, ploidy, and reproductive systems and the bearing these have on plant breeding procedures. Prerequisites: Genetics 304, 603. Staff

616. Animal Genetics. (3-3). Credit 4. II

Specialized study of animal genetics. Population genetics especially as related to breed improvement. Causes of change in gene frequency. Effectiveness of various methods of selection under various genetic circumstances. Analysis of genetic problems. Systems of mating. Standard textbooks and current scientific literature used. Prerequisites: Genetics 306, 406, 603. Mr. Shrode

620. Cytogenetics. (3-3). Credit 4. II

A study of correlated genetical and cytological phenomena. Prerequisites: Biology 615; Genetics 301. Mr. Reeves

623. Special Topics in Genetics. Credit 2 to 4. I

Content of this course will depend upon the interest of the students and the specialty of the instructor. Lecturers who have attained distinction in genetics or related fields will conduct this course. Staff

625. Speciation. (2-0). Credit 2. I

A study of the genetic and environmental forces which operate in species formation together with a critical examination and comparison of the more important current explanations of speciation. Prerequisites: Biology 346 or equivalent; Genetics 301. Mr. Reeves

628. Animal Breeding. (2-0). Credit 2. I

A course designed to acquaint the student with the current status of knowledge in the field of animal breeding through a critical survey of the literature. Emphasis is given papers dealing with problems of breeding for quantitative traits of economic importance in farm animals including beef cattle, dairy cattle, poultry, sheep, and swine. Considerable attention is focused on methods which have been used or are available for use in studying animal breeding problems. Prerequisite: Genetics 616. Mr. Shrode

631. Biochemical Genetics. (2-0). Credit 2. I

A study of the genetic control of cellular metabolism and a theoretical consideration of the mechanism of gene action. A consideration of nutrition and the genetical capacity for biosynthesis, gene-enzyme relationships, phototropism, plasmagenes, and the chemical nature of the agents of heredity. Prerequisites: Biochemistry and Nutrition 410 or Chemistry 301; Genetics 301. Mr. Kunkel

633. Forest Genetics. (3-0). Credit 3. I

Specialized study of genetics as applied to forest trees; forest genetics, forest tree improvement and forest tree breeding, with emphasis on genetics of conifers, especially pines. Fundamental and applied phases are included. Prerequisites: Genetics 603; approval of the instructor. Mr. Brown

634. Forest Genetics Laboratory. (0-6). Credit 2. II

Methods and techniques in forest genetics, forest tree breeding; crossing, grafting, air layering, field layouts, seed handling, greenhouse techniques. Prerequisite: Genetics 633. Mr. Brown

685. Problems. Credit 1 to 4 each semester. I, II, S

Technical research problems subject to approval of Head of Department. Staff

691. Research. Credit 1 or more each semester. I, II, S

Prerequisite: Genetics 603. Staff

Poultry Science 613. Breeding and Genetics of Poultry. (3-3). Credit 4. II

Rapid and intensive survey of the mode of inheritance of the most important morphological and physiological characters in poultry. Analysis of the comparative efficiency of various systems of breeding in the improvement of poultry. Scientific journals and technical literature reviewed. Research methods discussed. Prerequisite: Poultry Science 414 or the equivalent. Mr. Krueger

Department of Geography

G. W. SCHLESSELMAN (Head)

FOR GRADUATES AND ADVANCED UNDERGRADUATES

401. International Political Geography. (3-0). Credit 3. I

A study of some of the present social and political problems of world powers and also of the weaker nations. An effort to find geographic factors back of these problems and possible geographic adjustments. Mr. Schlesselman

FOR GRADUATES

601. Economic Geography. (4-0). Credit 4. I

A regional survey of the world distribution of major agricultural and industrial commodities with particular attention to the causal action of natural, social, and economic factors. (Offered in 1959-60 and in alternate years thereafter.) Mr. Schlesselman

Department of Geology and Geophysics

H. R. BLANK, G. V. CARROLL, PETER DEHLINGER*, K. J. KOENIG, S. A. LYNCH*
(Head), T. J. PARKER*, W. L. RUSSELL, M. C. SCHROEDER*, C. L. SEWARD, F. E.
SMITH, PAUL WEAVER

In addition to advanced academic training, special emphasis is placed on macropaleontology, micropaleontology, subsurface structural geology, sedimentation, ground water, and geophysics.

Detailed surface and subsurface courses in the microscopic study of recent and fossil organisms and their relation to ancient sediments are available, with abundant material for individual stratigraphic problems, especially in the Tertiary formations of the Gulf coast. Subsurface structural geology courses are based upon information obtained from well cuttings, cores, electric logs, and other well-logging devices. Field problems involving both Cenozoic structure and stratigraphy are aided by the numerous exposures of formations in the vicinity of the campus. Field problems in rocks of pre-Cambrian and Paleozoic ages are available in the Llano area. In geophysics emphasis is on exploration, especially for petroleum, and on the general physics of the earth.

GEOLOGY

FOR GRADUATES AND ADVANCED UNDERGRADUATES

303. Petrography and Petrology. (2-3). Credit 3. I

Principles of optical mineralogy; identification of minerals in fragments and thin sections by use of the petrographic microscope; thin section study of igneous rocks, and their classification. Prerequisites: Chemistry 207; Geology 204. Mr. Blank

304. Sedimentary Petrography. (2-3). Credit 3. II

Microscopic study of sedimentary and metamorphic rocks in thin sections; heavy mineral analysis; description, origin, and classification of sedimentary and metamorphic rocks. Prerequisite: Geology 303. Mr. Blank

406. Economic Geology. (3-0). Credit 3. I

The application of principles of geology, chemistry, and physics to the formation of useful minerals and rocks and a general survey of such deposits. Prerequisites: Chemistry 344; Geology 300, 306, 312. Mr. Blank

409. Geology of Non-Metallics Other than Petroleum. (3-0). Credit 3. II

The mineralogy, stratigraphic, and structural relations, origin, geographic distribution, uses, and economics of non-metallic mineral deposits other than petroleum. Prerequisites: Chemistry 344; Geology 300, 306, 312. Mr. Carroll

423. Micropaleontology. (1-6). Credit 3. II

A systematic survey of the important groups of micro-fauna with particular emphasis on their classification and use. Prerequisite: Geology 305. Mr. Smith

425. Subsurface Geology. (2-3). Credit 3. II

Study of well cuttings and cores; electrical, radioactive, drilling time, and caliper logs. Preparation of subsurface contour maps and cross sections. Prerequisites: Geology 300 and 404; or 311 and senior classification in petroleum engineering. Mr. Parker

433. Field Geology. (0-6). Credit 2. II

Two full afternoons per week devoted to the acquirement of techniques of field geology in areas adjacent to the campus. Prerequisites: Geology 300, 306. Mr. Russell, Mr. Seward

437. Cenozoic Micropaleontology. (1-6). Credit 3. I

Cenozoic micro-fauna of the Gulf Coast Province with emphasis on subsurface correlation. Prerequisite: Geology 423. Mr. Smith

*Graduate Advisor

441. Advanced Engineering Geology. (3-3). Credit 4. I

A survey of those phases of mineralogy, petrology, historical geology, structural geology, and sedimentation that may be applied to engineering problems. Not available to geology or petroleum engineering majors. Prerequisites: Senior classification; approval of Head of Department. Mr. Parker, Mr. Schroeder

FOR GRADUATES**609. Field Geology. Credit 2 to 6. I, II, S**

Systematic geologic surveying of selected areas. Prerequisite: Geology 300. Staff

612. Structural Geology. (3-0). Credit 3. I

A detailed study of geologic structures and a consideration of theories regarding earth movements, with selected readings. Prerequisite: Geology 312. Mr. Russell

616. Micropaleontology. (1-6). Credit 3 each semester. I

Study of microscopic fossils and their uses in correlation. Laboratory work in the examination of well samples. Prerequisite: Geology 423. Mr. Smith

618. Sedimentation. (3-0). Credit 3. II

Investigation of processes of sedimentation with analytical laboratory work on sedimentary rocks. Seminar. Prerequisite: Geology 315. Mr. Koenig

619. Petroleum Geology. (3-0). Credit 3. II

A theoretical study of some of the problems in petroleum geology. Prerequisite: Geology 404. Mr. Parker

620. Geology of Ground Water. (3-0). Credit 3. I

Principles of occurrence and movement of water beneath the earth's surface, and the influence of various geologic situations upon its behavior. Factors applying to estimates of supply. Engineering aspects of ground water. Mr. Blank, Mr. Schroeder, Mr. Weaver

622. Stratigraphy. (3-0). Credit 3. I

Sources and depositional environment of sediments, character and relation of sedimentary strata, and the principles involved in delimiting, correlating, and naming stratigraphic units. Mr. Schroeder

625. Advanced Ground-Water Geology. (3-0). Credit 3. II

Seminar course in the application of the principles of advanced geology to the development and use of ground water supplies. To be taken concurrently with Civil Engineering 630, Ground Water Hydrology. Prerequisites: Geology 620 or the equivalent; approval of Head of Department. Mr. Blank, Mr. Schroeder, Mr. Weaver

627. Continental Evolution Outside of North America. (2-0). Credit 2. II

A reading and conference course on the available literature, dealing with the basic geology of areas outside of North America in which industries and governments are asking for the services of American geologists. Designed for students contemplating foreign service. Areas to be studied will be suited to individual needs. Staff

629. Structural Framework of North America. (3-0). Credit 3. II

Description of the important geologic structures of North America and of the development of regional structural features in geological times. Prerequisite: Graduate classification. Staff

631. Geology in Engineering Construction. (3-0). Credit 3. II

Geologic principles applied to the construction of highways, foundations, bridge abutments and piers, tunnels, dams, reservoirs, etc. Construction materials. Test borings and their interpretation. Prerequisite: Geology 441. Mr. Blank

639. Paleozoic and Mesozoic Paleontology. (3-0). Credit 3. I

Study of the important faunas of these eras. Prerequisites: Graduate classification; approval of Head of Department. Mr. Koenig, Mr. Smith

640. Cenozoic Paleontology. (3-0). Credit 3. II

Study of the important faunas of this era with emphasis on the megafossils of the Gulf Coast. Prerequisites: Graduate classification; approval of Head of Department. Mr. Smith

643. Paleozoic Stratigraphy. (3-0). Credit 3. I

Stratigraphy of the Paleozoic System with particular emphasis on the Paleozoic of West Texas and Oklahoma. Prerequisites: Graduate classification; approval of Head of Department. Mr. Parker, Mr. Schroeder

644. Mesozoic Stratigraphy. (3-0). Credit 3. II

Study of the stratigraphy of the Mesozoic System. Prerequisites: Graduate classification; approval of Head of Department. Staff

645. Cenozoic Stratigraphy. (3-0). Credit 3. II

Study of the Cenozoic System. Prerequisites: Graduate classification; approval of Head of Department. Mr. Smith

646. Gulf Coast Stratigraphy. (3-0). Credit 3. II

Detailed study of the Mesozoic and Cenozoic Systems of the Gulf Embayment. Prerequisites: Graduate classification; approval of Head of Department. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

A course to enable graduate students with a major or minor in geology to undertake and complete with credit limited investigations which do not fall within their thesis or dissertation research and are not covered in the established curricula. Geological problems in engineering are included. Prerequisites: Graduate classification; approval of Head of Department. Staff

691. Research. Credit 1 or more each semester. I, II, S

Original research on problems in various phases of geology. Research for thesis or dissertation. Staff

GEOPHYSICS**FOR GRADUATES AND ADVANCED UNDERGRADUATES****435. Survey of Geophysical Exploration. (3-3). Credit 4. I**

A study of the methods and instruments used in geophysical prospecting for petroleum deposits. Prerequisites: Geology 311, 312 or 441; Physics 204; or approval of Head of Department. Mr. Dehlinger, Mr. Weaver

436. Seismic Exploration. (2-3). Credit 3. II

Study of seismic prospecting methods, instruments, and interpretive procedures. Prerequisite: Geophysics 435. Mr. Dehlinger

446. Physics of the Earth. (3-0). Credit 3. II

A survey course in physics of the earth and its implications during geologic history. Primarily for geophysicists but also for geologists, oceanographers, and others in the School of Arts and Sciences. Prerequisites: Geology 311, 312, or 441; Physics 204; or approval of Head of Department. Mr. Dehlinger, Mr. Weaver

485. Problems. Credit 1 to 3. I, II, S

Advanced problems in geophysics. Staff

FOR GRADUATES**651. Theoretical Seismology. (2-0). Credit 2. I**

Mathematical study of elasticity; wave propagation; effect of boundary conditions on elastic waves; types of elastic waves; energies, amplitudes, and absorption of elastic waves; elastic properties of rocks; propagation of elastic waves within the earth. Prerequisites: Geophysics 435; Mathematics 308 or registration therein. Mr. Dehlinger

653. Gravity and Magnetic Exploration. (2-0). Credit 2. I

Study of gravity and magnetic methods, instruments, and interpretation procedures. Prerequisites: Geophysics 435; Mathematics 308 or registration therein. Mr. Dehlinger, Mr. Weaver

655. Electrical and Radioactivity Exploration. (2-0). Credit 2. II

Study of electrical and electromagnetic prospecting methods, instruments, and interpretation procedures. Also study of radioactive, thermal, fluorescent, and geochemical exploration methods. Prerequisites: Geophysics 435; Mathematics 308 or registration therein. Mr. Dehlinger, Mr. Weaver

657. Earthquake Seismology. (2-0). Credit 2. I

Study of earthquakes, their causes, effects, method of location, determination of wave paths, interpretation of deep structures; and instruments used for recording. Prerequisites: Geophysics 435, and 651 or registration therein. Mr. Dehlinger

685. Problems. Credit 1 to 4 each semester. I, II, S

A course to enable graduate students with a major or minor in geophysics to undertake and complete with credit limited investigations which do not fall within their thesis or dissertation research and are not covered in the established curricula. Geophysical problems in engineering are included. Prerequisites: Graduate classification; approval of Head of Department. Staff

691. Research. Credit 1 or more each semester. I, II, S

Original research on problems in various phases of geophysics. Research for thesis or dissertation. Staff

Department of Health and Physical Education

W. M. DOWELL, C. W. LANDISS*, C. E. TISHLER* (Head)

Graduate courses in health and physical education have been designed to serve the needs of those actively engaged in public school and recreational work. It is the purpose of the Department of Health and Physical Education to assist in the advanced preparation of master teachers, school administrators, and recreational leaders.

Courses are offered to furnish a minor for graduate students who are working for a degree in such fields as education, agricultural education, and industrial education.

Prerequisites for a graduate minor in physical education include at least 24 semester hours as follows: (1) at least twelve semester hours of a combination of education and psychology; (2) six hours in each of the following: physical education and biology; and (3) specific prerequisites as indicated for certain courses.

HEALTH EDUCATION

FOR GRADUATES AND ADVANCED UNDERGRADUATES

415. Secondary School Health Education. (3-0). Credit 3. I, S

A study of health problems; needs of the individual; cooperation of home and community; resources for health in community, state, and nation; techniques of evaluation. Prerequisites: Biology 225; approval of instructor. Mr. Dowell

421. Elementary School Health Education. (3-0). Credit 3. II

A study of modern trends and methods in the elementary school health program; survey of materials and agencies and their value to an adequate health program. Prerequisites: Biology 225; approval of instructor. Mr. Dowell

*Graduate Advisor

FOR GRADUATES

631. Community and Public Health. (3-0). Credit 3. S

A study of community health problems and of public health measures to solve them. Typical organizations and specific functions of state and local health departments; relationship of local health department to state and federal health agencies and programs. Prerequisite: Health Education 415 or 421. (Offered in 1959-60 and in alternate years thereafter.) Mr. Dowell, Mr. Tishler

PHYSICAL EDUCATION

FOR GRADUATES AND ADVANCED UNDERGRADUATES

**423. Administration of Health and Physical Education. (3-0).
Credit 3. II, S**

Administrative problems involved in the coordination of the health, physical education, intramural, and athletic areas in a comprehensive program of physical education. Prerequisites: Biology 225; Health Education 415; Physical Education 213. Mr. Tishler

425. Tests and Measurements. (3-0). Credit 3. I, S

Use, interpretation, evaluation, and administration of existing tests in health and physical education; application of elementary statistical procedures. Prerequisites: Health Education 415; senior classification. Mr. Landiss

FOR GRADUATES

601. Survey of Research. (3-0). Credit 3. S

A study of published reports and research in the field of health and physical education. Prerequisite: Education 426 or Physical Education 425. Mr. Landiss

603. Coaching and Officiating. (3-0). Credit 3. S

Advanced coaching and officiating techniques in football, basketball, track, and baseball. Prerequisites: Teaching and coaching experience. Mr. Landiss

610. Administration of Interschool Athletics. (2-0). Credit 2. S

This course is designed for school superintendents, principals, and athletic directors. A study of the University Interscholastic League rules and regulations and the various problems confronting the school administrator in administration of the interschool athletic program. Prerequisites: Eighteen hours of education and physical education; graduate classification. Mr. Landiss

614. Philosophy and Principles. (3-0). Credit 3. S

Divergent origins, leaders, conditions, and forces affecting the development of health and physical education. Critical analysis of objectives. Principles of education, psychology, and physiology, and their implications in health and physical education. Prerequisite: General prerequisite for minor. (Offered in 1959-60 and in alternate years thereafter) Mr. Tishler

622. Supervision of Health and Physical Education. (3-0). Credit 3. S

Methods and policies of the school supervisor; conferences, planning and presenting the program, evaluating results, improving teachers-in-service. Prerequisite: Physical Education 423. (Offered in 1958-59 and in alternate years thereafter) Mr. Dowell, Mr. Tishler

636. Advanced Tests and Measurements. (3-0). Credit 3. S

Critical study of tests and measurements available; methods of constructing and evaluating new tests and measurements. Prerequisite: Physical Education 425. (Offered in 1958-59 and in alternate years thereafter) Mr. Landiss

681. Seminar. (1-0). Credit 1. I, II, S

General discussions of laws, legislative certification, professional ethics, and other current problems relating to health, physical education, and recreation. Prerequisites: Eighteen hours of education and physical education; graduate classification. Staff

685. Problems. Credit 1 to 3 each semester. I, II, S

Directed study of selected problems of health, physical education, and recreation not related to a thesis. Prerequisites: Graduate classification; approval of the instructor. Staff

Department of History and Government

J. H. BASS, J. H. HILL, J. M. NANCE, A. B. NELSON, R. W. STEEN* (Head)

HISTORY

FOR GRADUATES AND ADVANCED UNDERGRADUATES

313. The Latin-American Nations to 1820. (3-0). Credit 3. I

The period when the Americas south of the United States belonged to Spain and Portugal; discovery; colonial system; social and economic aspects; the wars of independence to the founding of the republics. Mr. Nelson

314. The Latin-American Republics, 1820 to the Present. (3-0). Credit 3. II

The twenty Latin-American republics since 1820; independence and the dictators; rise of the ABC states; Latin-American civilization after a century of independence; relations with Europe and with the United States in Pan-American movement; participation in world affairs. Mr. Nelson

315. The United States, 1901 to the Present. (3-0). Credit 3. I, II, S

A study of United States history during the twentieth century. Emphasis is placed primarily on the development and application of progressive principles from the "square deal" of the first Roosevelt to include the subsequent "new deal" and "fair deal" of the Roosevelt and Truman administrations; secondary emphasis is on the international relations of the United States as the nation became a world power, moved from isolation to leadership and back, followed by the development of the "good neighbor" policy toward Latin-America and our participation in World War II. The United Nations and problems. Staff

318. International Development since 1918. (3-0). Credit 3. I

A general survey of world politics since the close of World War I. Particular attention will be given to the problems and ideologies of the great powers of Europe and to those factors and conditions which explain present political tendencies and policies. Due consideration will also be given to colonial problems in Asia and Africa, the Sino-Japanese question, and the clash of United States-Japanese policies. World War II; the conflict of ideologies. Mr. Bass

411. The Old South. (3-0). Credit 3. I

A history of the antebellum south. Emphasis will be placed on the following topics: physical bases of the Southern regionalism; Southern alignments on national issues; the slavery-plantation economy and society of the Old South; secession and formation of the Confederacy. Mr. Bass

*Graduate Advisor

415. The Institutional Background of Texas, 1519-1845. (3-0).**Credit 3. I, S**

A study of the history of Texas from the Spanish period to annexation to the United States. Particular stress is placed upon the Spanish legal and administrative system. The Mexican administrative system, the establishment of Anglo-Americans in Texas, the revolution, the republic, and the fight for annexation. In each of these topics emphasis is placed upon principles and developments of this period which are reflected in the state's present-day society. Mr. Steen

416. Texas Since 1845. (3-0). Credit 3. II, S

A history of Texas since annexation. Careful attention is given to social, cultural, economic, and political developments, and to the place of Texas in national affairs. Mr. Steen

422. International Rivalry in the Gulf-Caribbean Area, 1840 to the Present. (3-0). Credit 3. I

Background of Spanish colonial policy, with British, French, and Dutch intrusion; conflict of interests; influence of islands on mainland settlement. Early United States interest; Monroe Doctrine and its extension; vital treaties with Colombia and Great Britain. European interest in the islands, Central America, Mexico, and Venezuela. Later policies of the United States, rise of Pan-Americanism and Pan-Hispanism. First reciprocal trade treaties and rise of United States imperialism. Policy of "the good neighbor" under Wilson and Roosevelt. Recent progress of Pan-Americanism toward western hemisphere solidarity. Mr. Nelson

423. American Foreign Relations. (3-0). Credit 3. I

The history of the United States foreign relations and development of our leading foreign policies to 1868. The Revolution and alliance with France; the development of isolation and neutrality; neutral rights and the War of 1812; nationalism and the Monroe Doctrine; Manifest Destiny and its consequences; diplomacy of the Civil War; the Monroe Doctrine applied to France in Mexico; the "Alabama" claims arbitration. Staff

424. American Foreign Relations. (3-0). Credit 3. II

The history of the United States foreign relations and development of our leading foreign policies, 1875 to the present; America becomes a world power; imperialism; World War I and the failure of neutrality; the League of Nations and its desertion; Pan-Americanism; failure of disarmament and rise of aggression; neutrality fails again; World War II; United Nations and problems. Staff

FOR GRADUATES**607. The United States, 1763-1800. (3-0). Credit 3. I**

A study of the causes of the American Revolution, the Revolution, the Articles of Confederation, and final union under the Constitution. Careful attention will be given economic and social developments as well as political developments. Prerequisites: Eighteen hours of history and government; graduate classification. Mr. Steen

610. The Trans-Mississippi West. (3-0). Credit 3. II

A study of the West in American history. The course will emphasize political, economic, social, and cultural influences of the frontier. Extensive reading will be required. Prerequisites: Eighteen hours of history and government; graduate classification. Mr. Nance

612. The French Revolution and Napoleon. (3-0). Credit 3. II

Detailed consideration of the decline of the ancient regime, the influence of the Encyclopedists, the causes and course of events during the revolution, and a study of the Napoleonic Era. Critical evaluation of the source material as well as interpretation of the historical importance of the period is stressed. Prerequisites: Eighteen hours of history and government; graduate classification. Mr. Hill

**615. Growth of Spanish Institutions in America, 1492-1857. (3-0).
Credit 3. I**

A study of the growth of political, economic, religious, military, and related institutions, both in theory and in practice, as proposed, developed, and applied in the Spanish-American colonies and nations, 1492-1857. Prerequisites: Eighteen hours of history and government; graduate classification. Mr. Nelson

685. Problems. Credit 1 to 3 each semester. I, II, S

Individual instruction in selected fields of history. The course will stress reports and wide reading in the field selected. Prerequisites: Eighteen hours of history and government; graduate classification. Staff

Department of Horticulture

See also Plant Breeding.

G. W. ADRIANCE* (Head), H. T. BLACKHURST, F. R. BRISON*, E. E. BURNS,
W. C. COOPER, H. C. MOHR, D. R. PATERSON, B. A. PERRY

Advanced work in horticulture will be conducted in the major fields of fruit production, vegetable production, and fruit and vegetable products. The minor work, which supports the thesis research, will usually include courses in at least two additional departments. Supporting work may be required in several of the related fields, such as chemistry, botany, plant pathology and physiology, entomology, soils, genetics, nutrition, and agricultural engineering. The specific objective of the individual student will guide his committee in the choice of courses from the departments mentioned above and others in special cases.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

418. Nut Culture. (1-3). Credit 2. II

Importance of nut crops, emphasis on pecan; problems of developing and maintaining pecan groves; developing native trees; study of varieties, fruit setting, soils, fertilizers, propagation methods, harvesting, handling, shelling, storage, and marketing the crop. Practice: Budding and grafting nursery stock, topworking native trees, storage and handling of budwood, examination of soils, spray application, visits to shelling plants. Mr. Brison

422. Citrus and Subtropical Fruits. (2-2). Credit 3. I

A study of subtropical fruits, with attention to citrus fruits, figs, olives, avocados, and dates. Practice: Study of varieties of subtropical fruits and their products; propagation and care of the various subtropical fruits. Prerequisite: Agronomy 301 or Plant Physiology and Pathology 313. Staff

426. Commercial Propagation. (2-2). Credit 3. II

A study of principles and practices followed in the propagation of fruit trees. The course includes a study of graft union, congeniality between stocks and scions, adaptation of stocks to environment, and commercial propagation practices for important fruits. Practice includes special treatments for seeds, budding, grafting, and transplanting for important fruits. Mr. Brison

427. Seminar. (1-0). Credit 1 each semester. I, II

Review of current experimental work in the field of horticulture, presented by staff members, graduate and senior students. Required of all graduate and senior students in horticulture, and restricted to these students. Mr. Blackhurst

*Graduate Advisor

434. Grading and Packing Vegetables. (2-2). Credit 3. I

A consideration of the factors of good quality in market vegetables. Standard grades and packages. Shipping methods. The relation of production methods to quality. Transit losses. The methods of marketing open to the producer. Recent trends in marketing and packaging. Mr. Mohr

FOR GRADUATES**601. Environmental Relations of Fruit Plants. (3-3). Credit 4. I**

Water, soil, and temperature relations of fruit plants, and their modification by management practices will receive primary consideration. Specific problems of management will be studied under field conditions. Mr. Adriance

602. Factors Influencing Fruit Production. (3-3). Credit 4. II

Responses of the principal fruit plants to pruning, differentiation of fruit buds, and internal and external factors influencing fruit setting will be considered in detail. Field studies of important problems will receive considerable attention. Mr. Adriance

603. Structure of Vegetable Plants. (3-3). Credit 4. I

A consideration of the morphological and anatomical features of important families of vegetable plants and the relation of these features to growing practices and progressive improvement of the various plants. Prerequisite: Biology 619 or 623. Mr. Mohr

604. Physiology of Vegetable Plants. (3-3). Credit 4. II

The topics of thermoperiodism, photoperiodism, nutrient deficiencies, water relations, temperature relations, fruit setting, growth, and seed germination will be taken up for each of the major vegetable crops. The recent developments in the use of hormones and selective herbicides in vegetable production will be discussed. Prerequisites: Horticulture 322; Plant Physiology and Pathology 314. Mr. Mohr

685. Problems. Credit 1 to 4 each semester. I, II, S

A comprehensive review of fundamental principles in research and methods employed in research. Practice in the various techniques which may be used in different investigations of horticultural problems. Staff

691. Research. Credit 1 or more each semester. I, II, S

Research in horticultural problems for thesis or dissertation. Staff

Department of Industrial Education

H. D. BEARDEN, J. L. BOONE, JR., C. H. GRONEMAN* (Head), L. B. HARDEMAN,
L. V. HAWKINS, F. J. KONECNY

It is the responsibility of the Industrial Education Department to develop master teachers and effective leaders in such human relationship vocations as teaching of industrial arts and vocational industrial education, vocational guidance, industrial school administration and supervision. It is a major function of the department to promote the interest of industrial education programs and to afford opportunities for professional education, both theoretical and practical.

The classrooms, laboratories, shops and libraries of the A. and M. College are made available to students for studying industrial education. The high schools in the vicinity of the College afford ample opportunity for students to observe the most modern techniques of teaching industrial subjects.

Specialists in other departments and divisions of the College give instruction in subject material which is closely related to industrial education. The shops and laboratories embody the newest type of equipment, shop plans, and instructional aids.

*Graduate Advisor

FOR GRADUATES AND ADVANCED UNDERGRADUATES

404. Visual Aids for Industrial Subjects. (1-2). Credit 2. I

This course is designed to develop an understanding of, need for, construction of, and use of visual aids for instruction in industrial subjects. Student activity consists of determining values of color in aids, use of projection equipment, mock-ups, posters, and blackboard illustrations. Staff

406. Vocational Guidance. (2-0). Credit 2. I

A study of the instruments and techniques of vocational guidance, its relation to education and industry, its meaning and purpose, and the analysis of methods of investigation and guidance procedures. Staff

409. Methods of Introducing Industrial Organization and Management into Industrial Schools. (2-0). Credit 2. S

The management of modern industrial enterprises and the possible adaptation to industrial schools. Staff

419. Laboratory of Industries Methods. (1-3). Credit 2. II

The student will make a study of the units of industries as generally recommended for public school industrial arts and will select, plan, and design problems and projects to meet these requirements. Staff

420. Follow-Up, Visitations, and Coordination in Part-Time Schools. (2-0). Credit 2. S

Selecting occupations suitable for young people to learn, placing students in suitable employment on a part-time basis, and coordinating their school duties with their work activities. Staff

423. Analysis Procedure. (1-2). Credit 2. I, II

Analysis is made of occupations to obtain content for instructional information. Jobs and operations are studied to determine the order and content of operation, job description, job evaluation, and job safety. Staff

424. Organization of Instructional Material. (1-2). Credit 2. S

A study will be made of published material available in the student's occupational field. Those parts found suitable for vocational classes will be indexed and organized for class use. Types of instruction sheets found necessary for efficient teaching will be written. Staff

FOR GRADUATES

601. History of Industrial Education. (2-0). Credit 2. I, II, S

A study of leaders, movements, and agencies, with special emphasis on the economic, social, and philosophical factors which have contributed to the development of industrial education in the United States. Staff

602. Industrial Arts Administration and Supervision. (2-0). Credit 2. I, II, S

Problems of the local director or supervisor of industrial arts. Staff

603. Administration and Supervision of Vocational Industrial Education. (2-0). Credit 2. I, II, S

Problems of the local director or supervisor of vocational industrial education. Staff

604. Industrial Programs for Junior Colleges and Technical Schools. (2-0). Credit 2. I, II, S

A study of the kinds, purpose, size, accreditation, growth, and teaching problems in the junior colleges, technical institutes, and adult schools, with particular emphasis on organization and presentation of industrial subject material in these schools. Staff

605. Problems in Industrial Safety. (2-0). Credit 2. I, II, S

Basic reasons for accidents; prevention of industrial accidents; qualifications and duties of safety consultants; methods of making investigations; making investigations and how to prepare safety reports. Staff

606. Organization of Industrial Arts Department. (2-0). Credit 2. I, II, S

Problems in determining the type and size of industrial arts programs for the various types and sizes of schools with plans for the organization of each. Staff

609. Methods of Teaching High School Drawing. (2-3). Credit 3. I, II, S

A survey of the field of drawing. The designing and organizing of problems and teaching devices. Staff

614. Guidance Seminar. (2-0). Credit 2. I, II, S

The organization of occupational information; educational and vocational guidance; counseling case problems. Prerequisite: Industrial Education 406 or equivalent. Staff

616. Methods of Teaching Industrial Arts in Secondary Schools. (2-0). Credit 2. I, II, S

Selecting and organizing instructional material for problems in a particular arts activity. Staff

618. Tests and Measurements in Industrial Education. (2-0). Credit 2. I, II, S

A study of testing and measuring devices and their application to industrial education subjects. Staff

619. Related Subjects in Part-Time Cooperative Programs. (2-0). Credit 2. I, II, S

The organization and presentation of content material necessary in part-time cooperative programs, and the direction of the study of the students engaged in such programs. Staff

621. Philosophy of Vocational Education. (2-0). Credit 2. I, II, S

The basic principles involved in the development and operation of industrial education programs under the State and Federal vocational laws. Staff

622. Philosophy of Industrial Arts Education. (2-0). Credit 2. I, II, S

The principles involved in the development and operation of industrial arts courses and their purpose and function in the field of general education. Staff

623. Vocational Guidance Procedures. (3-0). Credit 3. I, II, S

A workshop approach to the study of vocational guidance, programs, relationships, group techniques, and methodology of the clinical approach. Staff

626. Classroom Management and Shop Organization. (2-0). Credit 2. I, II, S

The organization of routine procedures to facilitate teaching; setting up roll-checking devices, issuing procedures for tools and materials, keeping material inventory, using assignment charts and progress charts, using student leadership in routine non-teaching class and shop routine, and keeping records. Staff

627. Teacher Training for Local Supervisors of Trade and Industrial Classes. (2-0). Credit 2. I, II, S

A course for local supervisors of industrial education programs or individuals responsible for conducting teacher training and upgrading programs on the local level. Methods for organizing and conducting teacher improvement programs, preparation and correlation of instructional material. Staff

**628. Organization of Vocational Industrial Schools and Classes. (2-0).
Credit 2. I, II, S**

Methods of making surveys, determining possible vocational education programs to meet the needs of different types of communities and the proper organization for these classes under the State plan for vocational education. Staff

630. Auto Mechanics. (1-4). Credit 2. I, II, S

Development and preparation of instructional materials and the testing of laboratory problems pertaining to the economic selection, operation, and maintenance of the automobile. Staff

631. Electricity. (1-4). Credit 2. I, II, S

Development and preparation of instructional materials and the testing of laboratory problems pertaining to practical theories and their application to electrical units within a high school program. Staff

632. Cabinet Making. (1-4). Credit 2. I, II, S

Development and preparation of instructional materials and the testing of laboratory problems pertaining to modern methods of kiln drying, veneer construction, upholstery, and fabrication within the furniture industry. Staff

633. Machine Shop. (1-4). Credit 2. I, II, S

Development and preparation of instructional materials and the testing of laboratory problems pertaining to modern practices and problems in the teaching of advanced machine shop. Staff

634. Ornamental Metal Work. (1-4). Credit 2. I, II, S

Development and preparation of instructional materials and the testing of laboratory problems pertaining to mild steel and tubular metal. Staff

681. Seminar. (1-0). Credit 1. I, II, S

General discussions of laws, legislation, certification, professional ethics, and other current problems relating to the industrial education teaching profession. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

A course designed to enable graduate majors to undertake and complete with credit, limited investigations which do not fall within the thesis research, and which are not covered by any other course. Staff

691. Research. Credit 1 to 4 each semester. I, II, S

Research for thesis. Topic subject to approval of the Head of the Department. Staff

Department of Industrial Engineering

A. R. BURGESS* (Head), J. P. COVAN, S. A. WYKES

The graduate program of this department is concerned with the advanced study of various industrial engineering techniques as they apply to manufacturing plants. Facilities for motion study, micromotion, methods analysis, statistical studies, and models of plant layout are available.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

401. Survey of Industrial Engineering. (3-0). Credit 3. I, II, S

A survey of the industrial engineering field; administrative decisions, plant location and design, layout of equipment, materials handling, production control, quality control, motion and time study, cost determination, wage plans, job evaluations, and merit rating. Prerequisite: Junior classification in engineering or business administration, or approval of Head of Department. Staff

*Graduate Advisor

404. Motion and Time Study. (2-3). Credit 3. I, II

Standardization of job conditions; methods improvement and motion economy; use of flow process charts and diagrams, micromotion analysis of motion pictures, simo-charts, multiple-activity charts; allowances; rating methods; taking time studies; use of standard data and development of time formulas. An actual methods improvement is made of a current industrial operation and a report prepared on the improved method. Prerequisite: Junior classification in engineering or business administration. Staff

406. Industrial Case Analysis. (1-0). Credit 1. II

Practice in arriving at decisions in the solution of typical management problems through the study and analysis of actual case problems. Prerequisites: Industrial Engineering 202, 302, 404, and registration in 414, 415, 420. Staff

410. Current Practices in Industrial Engineering. Credit 3. S

A study of outstanding applications of industrial engineering principles through direct visit to the plants in the industrial Middle West. Course comprises a three-weeks tour, with emphasis on discussion with men in industry who have pioneered in new ideas in organization, labor relations, materials handling, incentive plans, production control, quality control, and other important management techniques. Prerequisite: Senior classification in industrial engineering. Staff

411. Wage and Salary Control. (3-0). Credit 3. II

Personnel procedures, methods of hiring employees, wage systems, wage administration, job evaluation, merit rating, salary classification, fringe benefits, direct and hidden labor costs, morale building. Prerequisite: Junior classification in engineering or business administration, or approval of Head of Department. Mr. CoVan

412. Labor and Industry. (3-0). Credit 3. I, II

A brief review of the history of organized labor: critical study of fundamental Federal and State laws governing labor-management relations; study of current interpretations of labor laws, controversial labor-management issues and their solutions. Prerequisite: Senior classification in engineering or business administration, or approval of Head of Department. Mr. Burgess

414. Statistical Control of Quality. (2-3). Credit 3. I, II

The engineering aspects of controlling quality through the use of statistical methods. Frequency distributions, control charts for variables, control for fraction defective and defects per unit. Sampling inspection plans. Design of specifications; tolerance system and gaging. Administration of inspection. Prerequisite: Junior classification in engineering. Mr. Burgess, Mr. CoVan

415. Production Control. (1-3). Credit 2. I

The planning and control of production; operation analysis; routing; scheduling; dispatching; use of visual production charts and boards; inventory control; accumulation of material requirements; design of production control forms; forecasting production requirements; economic lot size; controls for job order, repetitive cycle, and straight line production. Prerequisite: Industrial Engineering 302, registration in 404. Mr. Wykes

416. Factory Layout. (1-6). Credit 3. II

The layout of a complete factory for a selected product. Use of machine templates and models; design of materials handling systems; machine erection; auxiliary services; design of storerooms; loading docks; choice of building types; machine selection; estimate of unit costs; estimate of capital requirements; personnel organization; safety considerations in plant layout. Prerequisites: Industrial Engineering 404, 415. Mr. Wykes

420. Manufacturing Costs. (3-0). Credit 3. I

The study of modern techniques used by engineers for controlling manufacturing costs. Computing probable returns from investments in new plants and new equipment. Use of break-even charts, profit graphs, machine replacement studies, comparison of alternative methods, standard costs, and budgeting, to control manufacturing costs. Introduction to operations research. Mr. Wykes

FOR GRADUATES**601. Industrial Surveys. (2-0). Credit 2. II**

Engineering problems related to industrial investigations, reports on organizations, personnel, capital equipment, financial policies, market, etc. Prerequisites: Industrial Engineering 415, 416. Mr. CoVan

602. Incentive for Management and Men. (2-0). Credit 2. II

Direct worker incentive, seasonal bonuses, quality incentives, profit-sharing plans for executives, profit-sharing for wage earners. Prerequisite: Industrial Engineering 404 and 411, or the equivalent. Mr. Wykes

603. Human Relations in Industry. (3-0). Credit 3. I

Causes of misunderstandings between management and labor; interdepartmental relations; conditions which influence the attitudes and productivity of workers; principles of leadership; job analysis for a selected industry; selection, training, follow-up, dismissals; the industrial engineer's relations with shop employees; critical study of current labor-management problems. Prerequisite: Industrial Engineering 412. Mr. CoVan

604. Advanced Time and Motion Studies. (1-6). Credit 3. I

Deals with applications and refinements of time and motion study; balancing operations in a group or on an assembly line; rate-setting based on formulas and curves; standard cost systems; synthetic times, micromotion studies. Prerequisite: Industrial Engineering 404 or the equivalent in practical time study experience in industry. Mr. Wykes

608. Industrial Case Analysis. (3-0). Credit 3. II

Practice in the application of principles to the solution of actual case problems involving broad management decisions. Special attention is given to problems indigenous to Texas industry. Prerequisite: Graduate classification in industrial engineering or approval of Head of Department. Mr. Burgess

614. Advanced Quality Control. (2-3). Credit 3. I

Advanced statistical methods applied to quality control problems; significance of differences; single and multiple correlation; analysis of frequency distributions; sequential sampling; writing of specifications; design of special gages; administration of inspection staff; gage laboratory work in checking gages; keeping charts on actual machine processes. Prerequisites: Graduate classification in engineering; Industrial Engineering 414. Mr. Burgess

620. Principles of Operation Analysis. (4-0). Credit 4. II

Use of mathematical models in making decisions; optimizing over-all policies; probability methods; linear programming; transportation models; queuing theory; learning curves; information theory; Monte Carlo methods; use of high speed computers for managerial control. Prerequisites: Industrial Engineering 420, 614; graduate classification in industrial engineering. Mr. Burgess

651. Tool Design. (2-3). Credit 3. II

Design of automatic machine tools; tracer and director control of tool paths; automatic feeding, holding, indexing and ejection of work pieces; tool replacement analysis. Study of cutting forces, workpiece and fixture distortion. Automatic inspection and sorting, assembly, and packaging. Prerequisites: Industrial Engineering 451, 452; graduate classification in industrial engineering. Mr. CoVan

681. Seminar. (2-0). Credit 2. II

Group study and discussion of current developments in industrial engineering practices as reported in the literature and as presented by representatives from industry. Prerequisite: Graduate classification in industrial management or industrial engineering. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

Investigation of special topics not within the scope of thesis research and not covered by other formal courses. Prerequisite: Graduate classification in industrial engineering. Staff

691. Research. Credit 1 or more each semester. I, II

Research in the industrial engineering field; subject to meet the needs of the individual student. Staff

Department of Journalism

FOR GRADUATES AND ADVANCED UNDERGRADUATES

406. Publicity and Public Relations. (3-0). Credit 3. II

Practical analysis of the various fields of publicity and public relations. Students make surveys and perform laboratory work on actual projects. Theory and practice in various aspects of functioning publicity, including news writing, advertising, and radio.

(Journalism 406 is for graduate credit for non-journalism majors and to be used only to satisfy requirements for work in the minor field.)

Department of Mathematics

R. E. BASYE*, B. W. BREWER*, DAN HALL, J. T. HURT*, E. C. KLIPPLE* (Head), H. A. LUTHER, W. S. McCULLEY, B. C. MOORE, W. L. PORTER, S. A. SIMS, M. E. TITLE

The Mathematics Department has two main objectives in its graduate offerings. First, it offers courses from which a graduate student may choose an appropriate sequence for an advanced degree in mathematics; second, it attempts to furnish proper mathematical preparation for graduate students majoring in other departments.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

307. Calculus. (3-0). Credit 3. I, II, S

Introduction to series, Taylor's series, partial differentiation, elementary differential equations, applications. Prerequisite: Mathematics 210. Staff

308. Differential Equations. (3-0). Credit 3. I, II, S

Fourier series, linear equations, solution by Laplace transforms and by series, applications. Prerequisite: Mathematics 307. Staff

405. Vector Analysis. (3-0). Credit 3. I

Elementary operations, vector and scalar products of two vectors, vector and scalar products of three vectors, differentiation of vectors, the differential operators, applications to electrical theory, applications to dynamics, mechanics, and hydrodynamics. Prerequisite: Mathematics 210. Mr. Sims

*Graduate Advisor

409. Advanced Calculus. (3-0). Credit 3. I, II, S

The concept of a function, limit of a sequence, continuity, theorems on continuous functions, the definite integral, the derivative, mean value theorems, hyperbolic functions, improper integrals. Prerequisite: Mathematics 210. Mr. Luther

410. Advanced Calculus. (3-0). Credit 3. II

Theory of plane curves, mechanics of a particle, Taylor's theorem and applications, numerical integration, convergence and divergence of series, power series, periodic functions, Fourier series. Prerequisite: Mathematics 409. Mr. Luther

411. Mathematical Probability. (3-0). Credit 3. I

Introductory concepts, permutations and combinations, elementary principles of the theory of probability, probability of experiment, distribution functions and continuous variables, averages, curve fitting, applications. Prerequisite: Mathematics 210. Mr. Tittle

414. Mathematical Statistics. (3-0). Credit 3. I, II

History and terminology of statistics, probability theory, discrete and continuous distributions, expected values, moments, sampling, confidence intervals, tests of hypotheses. Prerequisite: Mathematics 210. Mr. Tittle

415. Modern Algebra. (3-0). Credit 3. II

Integers, rational numbers, real numbers, complex numbers. Groups, rings, integral domains, fields. Polynomials over a field. Prerequisite: Mathematics 210. Mr. Luther

FOR GRADUATES**601. Higher Mathematics for Engineers and Physicists. (4-0).**

Credit 4. I, II, S

Surface integrals, line integrals, vector analysis, partial differential equations, elementary complex variables, applications. Prerequisite: Mathematics 308. Mr. Hall

602. Higher Mathematics for Engineers and Physicists. (4-0).

Credit 4. I, II, S

Fourier integrals, Bessel and Legendre functions, Laplace's equation, the diffusion equation, the wave equation, Green's functions. Prerequisite: Mathematics 601. Mr. Basye

606. Theory of Probability. (4-0). Credit 4. II

Formulae for combinations and arrangements, problems in total and compound probability, expectation, risk, the problem of repeated trials, Stirling's formula, the probability integral, theorems in mean value, dispersion, determination of best value, the law of error, the correlation coefficient, curve fitting. Prerequisite: Mathematics 411. Mr. Tittle

607. Real Variables. (4-0). Credit 4. I

Fundamental theory of number sets and point sets, elementary applications to real functions, theory of linear measure. Prerequisite: Mathematics 409. Mr. Klipple

608. Real Variables. (4-0). Credit 4. II

Measurable functions, the Riemann integral, the Lebesgue integral, applications to real functions and series. Prerequisite: Mathematics 607. Mr. Klipple

609. Numerical Calculus. (3-3). Credit 4. I

Simultaneous linear equations, algebraic and transcendental equations, interpolation, numerical integration and differentiation, numerical solution of differential equations, finite differences, divided differences, approximation by least squares, simple difference equations. The laboratory will consist of programming and operating a large digital computer (magnetic drum stored program computer). Prerequisite: Mathematics 308. Mr. Moore

610. Numerical Methods in Differential Equations. (3-3). Credit 4. II

Elementary numerical solutions, analytical foundations, systems of equations, higher order equations, two-point boundary problems, numerical methods for partial differential equations, linear analysis, numerical methods in linear analysis, and introduction to linear programming. The laboratory will consist of programming and operating a large digital computer (magnetic drum stored program computer). Prerequisites: Mathematics 308; approval of the instructor. Mr. Moore

611. Ordinary Differential Equations. (4-0). Credit 4. I

Definitions, general methods of solving first order differential equations, singular solutions, geometrical applications, trajectories, motion of a particle, special methods for the equation of the first order, linear equations of the second order, the method of successive approximations, systems of ordinary differential equations, interpolation and numerical integration, symbolic methods, numerical solution of differential equations. Prerequisite: Mathematics 308. Mr. Hurt

612. Partial Differential Equations. (4-0). Credit 4. II

General solution of first order partial differential equations, solution of second order equations from physics and mechanics by separation of variables, solution of second order equations by Green's functions. Prerequisite: Mathematics 611 or the equivalent. Mr. Hurt

615. Advanced Algebra. (4-0). Credit 4. I

Polynomials and their most fundamental properties, determinants, linear dependence, linear equations, theorems concerning the rank of a matrix, linear transformations and combinations of matrices, invariants, bilinear forms, quadratic forms, pairs of quadratic forms. Prerequisite: Mathematics 308 or 409. Mr. Luther

616. Advanced Algebra. (4-0). Credit 4. II

Properties of polynomials, factors and common factors of polynomials in one variable and of binary forms, factors of polynomials in two or more variables, integral rational invariants, symmetric polynomials, elementary divisors, the equivalence and classification of pairs of bilinear forms and collineations, equivalence and classification of pairs of quadratic forms. Prerequisite: Mathematics 615. Mr. Luther

617. Complex Variables. (4-0). Credit 4. I

Fundamental theory of analytic functions, conformal mapping, applications. Prerequisite: Mathematics 601. Mr. Basye

618. Complex Variables. (4-0). Credit 4. II

Schwarz-Christoffel theorem, infinite products, meromorphic functions, elliptic functions, special functions, applications. Prerequisite: Mathematics 617. Mr. Basye

620. Fourier Series and Allied Topics. (4-0). Credit 4. I

Convergence of Fourier series, the cosine series, the sine series, uniform convergence of Fourier series, differentiation and integration of Fourier series, Fourier integrals, Bessel functions. Prerequisite: Mathematics 608. Mr. Klipple

622. Laplace Transforms. (4-0). Credit 4. II, S

Fundamental theorems concerning Laplace transforms. Applications to ordinary and partial differential equations, difference equations, and integral equations. Prerequisite: Mathematics 601. Mr. Klipple

623. Higher Mathematics for Chemical Engineers. (4-0). Credit 4. II

Derivation and solution of the differential equations of chemistry and chemical engineering, mathematical theory of distillation, series solutions of differential equations, Bessel functions. Prerequisite: Mathematics 308. Mr. Moore

624. Higher Mathematics for Chemical Engineers. (4-0). Credit 4. I

Equations of finite differences, applications of partial differentiation, solution of partial differential equations, Fourier integrals, orthogonal systems, numerical and graphical methods, theory of errors. Prerequisite: Mathematics 623. Mr. Moore

625. Matrix Algebra and Tensor Calculus. (4-0). Credit 4. I, II, S

Elementary matrix operations; linear transformations; canonical and modified triangular forms of matrices; inverse of a non-singular matrix; diagonal and rotation matrices; characteristic roots of a matrix; symmetric matrices; tensor concept; covariance and contravariance; algebra of tensors; metric tensors; Christoffel's symbols; covariant differentiation of tensors; applications. Prerequisite: Mathematics 405 or 601. Mr. Hurt

627. Theory of Numbers. (3-0). Credit 3. I

Ordered rings; the ring of integers; Euclidean rings; unique factorization; congruences; the Fermat-Euler Theorem; residues of powers; quadratic residues; the Legendre, Jacobi, and Kronecker symbols; quadratic reciprocity; diophantine equations; the series of primes; tests for primality. Prerequisite: Mathematics 409 or 415. Mr. Brewer

628. Theory of Numbers. (3-0). Credit 3. II

Commutative rings; ideals and residue class rings; principal ideal rings; unique factorization rings; quadratic fields; fields of higher degree. Prerequisite: Mathematics 627. Mr. Brewer

641, 642. Modern Analysis. (4-0). Credit 4 each semester. I, II

Recent developments in the theory of functions. Prerequisite: Mathematics 608. Mr. Klipple

685. Problems. Credit 1 to 4 each semester. I, II, S

A course offered to enable students to undertake and complete with credit limited investigations which do not fall within their thesis research and which are not covered by any other courses in the curriculum. Prerequisite: Mathematics 601. Staff

691. Research. Credit 1 or more each semester. I, II, S

Research for thesis or dissertation. Staff

Department of Mechanical Engineering

C. W. CRAWFORD, E. S. HOLDREDGE, L. S. O'BANNON, C. M. SIMMANG* (Head),
J. G. H. THOMPSON, W. I. TRUETTNER, D. M. VESTAL, JR., R. M. WINGREN*

The graduate program in mechanical engineering is designed to prepare a student to work in the more technical phases of this field. The courses are planned not only to give certain factual information but to emphasize fundamentals and methods, to clarify principles, to indicate their applicability in a growing field, to develop a rational analysis from basic fundamentals, and to develop skill in the formulation of solutions to engineering problems.

The student is allowed to choose his courses so as to specialize in the heat power field, mechanical design, or applied mechanics. Laboratory facilities are available for graduate study and research in metallurgy, stress analysis including photoelasticity, vibrations, internal combustion engines, refrigeration, and heat transfer.

The Mechanical Engineering Department and other departments in the School of Engineering and in the School of Arts and Sciences offer a number of courses in engineering mechanics so that the student may specialize in this field if he desires.

*Graduate Advisor

Mathematics 307, Calculus, is required for a Bachelor of Science degree in Mechanical Engineering and students planning to do graduate work in mechanical engineering should have completed both Mathematics 307 and 308 before entering.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

340. Physical Metallurgy. (2-3). Credit 3. I, II, S

The fundamentals of the physical metallurgy of irons, steels, and their alloys; precipitation hardening and corrosion resistance of non-ferrous alloys; laboratory work in polishing, etching, and preparation of specimens, making and studying photomicrographs. Prerequisite: Junior classification. Staff

407. Mechanical Refrigeration. (3-0). Credit 3. I

The application of the principles of thermodynamics to mechanical refrigeration. The equipment and methods of practical production of refrigeration, ice making, and cold storage. Prerequisite: Mechanical Engineering 323 or 327. Mr. O'Bannon

410. Internal Combustion Engines. (3-0). Credit 3. I, II

Thermodynamics of cycles for internal combustion engines and gas turbines. Fuels, combustion, and knock testing. Performance characteristics of various types of engines. Prerequisite: Mechanical Engineering 323 or 327. Mr. Truettner

412. Advanced Problems in Mechanical Engineering. Credit 2 to 5. I, II, S

Special problems in the various phases of mechanical engineering are assigned to individual students or to groups. Readings are assigned, and frequently consultations are held. Prerequisites: By permission and senior classification in mechanical engineering. Staff

414. Steam and Gas Turbines. (3-0). Credit 3. I

Analysis of gas turbine cycles, high speed gas flow, turbine and compressor kinematics and thermodynamics; study of steam turbines and of special cycles. Prerequisites: Mechanical Engineering 328, 344. Staff

436. Heating, Ventilating, and Air Conditioning. (3-0). Credit 3. II

The thermodynamics of heating, cooling, and conditioning of air of residence, office, and factory. The calculations for and selections of heating, ventilating, and air conditioning equipment, piping, and duct layouts. Prerequisite: Mechanical Engineering 323 for non-mechanical engineering majors, 328 for mechanical engineering majors. Mr. O'Bannon

445. Machine Design. (2-3). Credit 3. I, II

The theory and practice of machine design applied to various machine parts, such as columns, screws, shafts (considering combined stresses), bearings, brakes, springs, and complete machines. Prerequisite: Mechanical Engineering 338. Staff

446. Machine Design. (2-3). Credit 3. I, II

The theory and practice of machine design applied to problems encountered in transmission of power by means of belts, ropes, chains, and gears. Prerequisite: Mechanical Engineering 338. Staff

457. Engineering Analysis. (3-0). Credit 3. I

Mathematical and experimental methods of solving problems in the various fields of engineering. Dimensional analysis, representation and analysis of experimental data, graphical and numerical solution of differential equations, analogies and computers. Prerequisites: Mathematics 307; senior classification in engineering. Mr. Holdredge

459. Mechanical Vibration. (3-0). Credit 3. II

The basic theory of vibrating systems with single and multiple degrees of freedom and the principles of transmission and isolation of vibrations. Prerequisites: Mathematics 307; Mechanical Engineering 313. Mr. Wingren

FOR GRADUATES

601. Advanced Machine Design. (4-0). Credit 4. I

A study of combined stresses and theories of failure, statically indeterminate structures, piping design, flat plates, curved beams, and the theory of lubrication. Prerequisites: Mathematics 307 and 308 or registration therein. Mr. Wingren

603. Power Plants. (2-6). Credit 4. II

The design of central and isolated power plants with special attention to over-all economic operation. Prerequisite: Mechanical Engineering 417. Mr. Simmang

605. Engineering Analysis. (4-0). Credit 4. I

A study of analytical, graphical, and approximate methods of solving problems common to engineering; dimensional analysis and model study; design of experiments; statistical analysis and interpretation of test data including derivation of empirical equations. Prerequisite: Mathematics 308 or registration therein. Mr. Holdredge

613. Engineering Dynamics. (4-0). Credit 4. II

A study of the dynamics of particles and of rigid bodies; the virtual work principle, Lagrange's and Euler's equations of motion, and Hamilton's principle applied to engineering problems. Prerequisites: Mathematics 308; Mechanical Engineering 313. Mr. Wingren

615. Advanced Engineering Thermodynamics. (4-0). Credit 4. I

The theories of thermodynamics and their application to the more involved problems in engineering practice. Prerequisite: Mechanical Engineering 328. Mr. Simmang

616. Heat Transmission. (4-0). Credit 4. II

The fundamental laws relating to heat flow, the application of these laws to engineering materials used in various industrial processes; a study of recent developments by reference to current literature. Prerequisites: Mathematics 308; Mechanical Engineering 605. Mr. Holdredge

617. Mechanical Vibrations. (4-0). Credit 4. I

The theory of vibrations of machines and structures. Prerequisites: Mathematics 308; Mechanical Engineering 313. Mr. Wingren

618. Advanced Air Conditioning. (2-6). Credit 4. II

Thermodynamics of air vapor mixtures applied to problems of air conditioning. Practice in design and selection of equipment with emphasis on the preparation of plans and specifications. Prerequisite: Mechanical Engineering 436. Mr. O'Bannon

619. Theoretical Methods of Machine Design. (4-0). Credit 4. II

Applications of the theory of elasticity to machine design. Study of compatibility equations, stress functions, energy methods, etc. Prerequisites: Mathematics 601 or registration therein; Mechanical Engineering 601. Mr. Wingren

620. Experimental Methods of Machine Design. (3-3). Credit 4. II

Use of experimental methods in machine design. Study of photoelasticity, electric strain gauges, stresscoat, etc. Prerequisites: Mathematics 308 or registration therein; Mechanical Engineering 601 or registration therein. Mr. Wingren

621. Turbomachinery. (4-0). Credit 4. II

A study of flow problems encountered in the design of water, gas, and steam turbines; centrifugal and axial-flow pumps and compressors. Prerequisites: Mathematics 308; Mechanical Engineering 344. Mr. Vestal

640. Ferrous Metallurgical Design. (3-3). Credit 4. II

A detailed study of the phase transformations in steel, the resulting changes in mechanical properties, the peculiarities of the steels, and their influence upon the design of machine elements. Prerequisite: Mechanical Engineering 440. Staff

643. Nuclear Metallurgy. (3-0). Credit 3. II

The physical and metallurgical properties of metals used in nuclear reactors and the reasons for their use. Prerequisite: Mechanical Engineering 409. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

The content will be adapted to the interest and needs of the group enrolled. Staff

691. Research. Credit 1 or more each semester. I, II, S

Methods and practice in mechanical engineering research for thesis or dissertation. Staff

Department of Oceanography and Meteorology

R. G. BADER, R. J. DELAND, G. A. FRANCESCHINI, D. W. HOOD, D. F. LEIPPER*
(Head); M. G. H. LIGDA, J. G. MACKIN, K. M. RAE, R. O. REID, W. J. SAUCIER,
B. W. WILSON

DEGREES

Graduate degrees are offered in oceanography and meteorology.

OCEANOGRAPHY

Oceanography is the study of the oceans and their boundaries. It is based upon the unity of the sciences of the sea. Effective study of the subject requires thorough previous training in one of the basic sciences such as biology, chemistry, geology, mathematics, meteorology, physics, or in engineering. Therefore, much of the work in oceanography is conducted at the senior and graduate levels.

Oceanography may be utilized in solving certain problems arising in fisheries work, offshore oil and gas operations, navigation, prevention of beach erosion, weather forecasting, recreation, extraction of raw materials from the sea, marine construction, coastal sanitation, military operations, fresh water supply, and many other activities. It requires broad interests, numerous skills, a real liking for the sea, and an adaptability to shipboard life.

Five options and their corresponding engineering phases are offered in oceanography. These are the biological, chemical, geological, physical, and meteorological. The options differ primarily in the undergraduate work. Prerequisites required are the equivalent of a B.S. degree in one of the basic fields and some work in each of the other basic fields.

To qualify for an advanced degree in oceanography, the student must learn how to apply the training in his basic science to the marine environment, which requires a combination of principles and methods and a certain body of knowledge unique to oceanography; and he must develop an interest in the other marine sciences.

METEOROLOGY

Meteorology is the science of the atmosphere and its phenomena. It concerns the study of the atmospheric processes operating internally and at the earth's surface. The objective in meteorology is to determine the physical

*Graduate Advisor

laws of weather and climate and to apply them in ways benefiting life and human endeavors, such as in weather forecasting. The greatest uses of weather information and forecasts have been in aviation and in the general public interest. Increasing rewards are being found in applications to agriculture, business, shipping, engineering, civil and industrial planning, health and travel, recreation, and related sciences.

Prerequisites for graduate work in meteorology are satisfied by the undergraduate program offered in the Department. Graduate programs may be organized to provide specialization in certain applications such as marine meteorology, agricultural meteorology, and radar meteorology.

FACILITIES AND PARTICIPATION IN RESEARCH

Graduate students often take an active part in one or more of the research contracts sponsored in the Department by industry and by state and federal agencies. In addition to campus facilities others are available for working at sea and in several coastal and offshore locations.

METEOROLOGY

FOR GRADUATES AND ADVANCED UNDERGRADUATES

445. Atmospheric Physical Processes. (3-0). Credit 3. II, S

The physics of heat, moisture, and momentum transfer in the atmosphere; radiation, evaporation, condensation, advection, convection, turbulence, and diffusion; their consequences upon the weather. Prerequisite: Meteorology 336. Mr. Deland

458. Weather Analysis. (1-12). Credit 5. I, S

A continuation of Meteorology 457, but with the emphasis on motions of wind and weather patterns, and on weather sequence. Introduction to principles and methods of prognosis and weather forecasting. Prerequisites: Meteorology 445, 457. Staff

465. Agricultural Meteorology. (2-0). Credit 2. II

Study of principles of meteorology as they are related to agriculture, with special emphasis upon the climate of the surface layers of the atmosphere. Prerequisite: Approval of the instructor. Staff

FOR GRADUATES

636. Dynamic Meteorology. (3-0). Credit 3. I

A formal treatment of the principles of fluid dynamics as they apply to the atmosphere; the Navier-Stokes equations, perturbation theory, energy equations and transformations, vorticity, barotropic and baroclinic systems, cyclone theories, and numerical weather prediction. Prerequisites: Mathematics 601; Meteorology 336; or the equivalent. (To be offered in 1958-59 and in alternate years thereafter) Mr. Deland

646. Atmospheric Physics. (3-0). Credit 3. I, S

Fog, cloud, and precipitation physics, thunderstorms; atmospheric electricity; optical and acoustical phenomena; turbidity; the structure and exploration of the higher atmosphere; atmospheres of other planets. Prerequisite: Meteorology 445. Mr. Ligda

658. Weather Analysis. (2-6). Credit 4. I

Discussion, application, and critical evaluation of methods employed by American and foreign centers for analyzing and forecasting circulation and weather patterns over periods up to 3 days; objective analysis and numerical prediction; recent developments; techniques for analysis of specific weather patterns. Prerequisites: Meteorology 457 or the equivalent; approval of Head of Department. Mr. Saucier

665. Micrometeorology. (3-0). Credit 3. II

A study of the physical process occurring at the interface between earth and atmosphere, with special emphases upon evaporation, turbulent diffusion of gases, variations in wind, temperature, and humidity in the lowest few meters of the atmosphere. Prerequisites: Mathematics 308; Meteorology 445; Physics 301. Mr. Deland

675. Radar Meteorology. (3-0). Credit 3. I

Study of the theory and practice of radar storm observations. Prerequisites: Meteorology 445, 457. Mr. Ligda

676. Hydrometeorology. (3-0). Credit 3. II

The role of weather and weather processes in land water problems. Prerequisite: Meteorology 326 or approval of the instructor. Mr. Saucier

679. Military Applications of Meteorology. (3-0). Credit 3. I, S

Applications of meteorological knowledge and data to related activities and problems in the national defense not under security classification. Prerequisite: Meteorology 457. Staff

681. Seminar. (2-0). Credit 2. II

Presented by students and based upon their research work and upon surveys of the literature. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

A course offered to enable majors in meteorology to undertake and complete with credit in their particular fields of specialization limited investigations which do not fall within their thesis research and which are not covered by any other courses in the established curriculum. Staff

691. Research. Credit 1 or more each semester. I, II, S

For thesis or dissertation. Topic subject to approval of the Head of the Department. Staff

OCEANOGRAPHY**FOR GRADUATES AND ADVANCED UNDERGRADUATES****401. Introduction to Oceanography. (3-0). Credit 3. I, II, S**

The various aspects of oceanography with emphasis upon those pertinent in the Gulf of Mexico. The principles upon which the disciplines of the subject are based. The unity of the marine sciences and their importance to man. The relations between oceanography and the fields of biology, chemistry, engineering, geography, geology, mathematics, meteorology, and physics. Opportunities in oceanography. Prerequisite: Senior classification in engineering or in a biological or physical science or the approval of the instructor. Mr. Leipper

431. Geological Oceanography. (3-0). Credit 3. I

Topography and characteristic features of the ocean bottom; marine shorelines and processes operating in the coastal zone; nature of marine sediments; marine transportation and deposition of sedimentary materials; erosion of beaches. Prerequisites: General prerequisites for oceanography. Mr. Bader

441. Chemical Oceanography. (3-0). Credit 3. I

The chemical composition and properties of sea water; the definition and calculation of salinity, the pH, excess base, and carbon dioxide system in the sea; nutrients, their cycles and their distribution; oxygen and other dissolved gases; chemistry of sedimentation; composition of organisms and organic constituents of sea water; marine corrosion; extraction of raw materials from the sea. Prerequisites: General prerequisites for oceanography. Mr. Hood

FOR GRADUATES

601. Research Methods in Oceanography. (1-0). Credit 1. I, II, S

Selection of a research problem for thesis work; planning the program of investigation. Prerequisites: General prerequisites for oceanography. Staff

603. Sea Laboratory Techniques. (0-6). Credit 2. II

Practice in techniques used regularly aboard ship and in collecting field data. Cruise planning, navigational methods, collection of hydrographic, bathymetric, and meteorological data, sediment sampling, biological sampling, and the collection of water samples for chemical analysis will be stressed. Prerequisites: General prerequisites for oceanography. Staff

610. Physical Oceanography. (3-0). Credit 3. I

Survey of the physics of the sea; physical properties, transmission of light and sound in the sea, sea ice; heat budget of the sea and transformation of energy within the sea and at the boundaries; evaporation from the sea, description of water masses and their origin; the horizontal and vertical circulation of the seas; the applied dynamic and kinematic formulas for circulation in the sea; the concept of dynamic equilibrium of the different concentrations within the sea; introduction to waves and tides of the sea. Prerequisites: General prerequisites for oceanography. Mr. Reid

611. Theoretical Physical Oceanography. (3-0). Credit 3. II

Theoretical and quantitative aspects; equations of motion; equation of continuity; boundary conditions; distribution of properties in the presence of diffusion; heat budget; stability; dynamics and computation of ocean currents; wind currents; turbulence; friction; work at sea. Prerequisites: Mathematics 601 or registration therein; Oceanography 610. Mr. Reid

612. Theory of Ocean Waves. (3-0). Credit 3. II

Generation and decay of waves in deep water; modification of waves and swell in shallow water; longshore currents and rip currents; wave action on structures. Prerequisites: Mathematics 308; Oceanography 610. Mr. Reid

613. Engineering Aspects of Oceanography. (3-0). Credit 3. I

Review of practical information gained from oceanography research, including information on ocean waves, currents, sea level changes, and on physical, chemical, and biological parameters from an engineering point of view; application of this knowledge to such engineering problems as the maintenance of harbors, marine structures and ships, together with a discussion of related strategic operations at sea; marine instrumentation. Prerequisites: Oceanography 610, 612. Mr. Wilson

614. Dynamics of the Ocean and Atmosphere. (3-0). Credit 3. I

Advanced theory of the ocean dynamics, a comparison of the hydrodynamic and thermodynamic character of the ocean and the atmosphere; the mutual dependence of the dynamics and thermodynamics of the sea on those of the air and vice versa; some special theories from the mean equation of motion, gradient wind, jet stream, mutual adjustment of the mass field and velocity field in the sea; mutually coupled temperature variations of the sea and the air; wind driven currents; the general hydrodynamic problem of the ocean and of the atmosphere, and an investigation of its uniqueness; the maintenance of the general circulation. Prerequisites: Mathematics 602; Oceanography 611. (Offered in 1959-60 and in alternate years thereafter.) Mr. Reid

620. Biological Oceanography. (3-0). Credit 3. I

Critical study of important contributions defining major biological divisions, provinces, and life zones of the oceans; effects of climate, chemical, and physical barriers, and phylogeny on zoogeography; factors relating to population cycles; productivity problems; ecological inter-relationships of major groups of plants and animals in the sea. Prerequisites: General prerequisites for oceanography. Mr. Rae

- 621. Biological Oceanography of the Gulf of Mexico. (1-6). Credit 3. II**
Detailed examination of selected aspects of biological oceanography which are of major importance in the Gulf of Mexico. Prerequisite: Oceanography 620; undergraduate major in biology, or approval of the instructor. Mr. Rae
- 631. Geological Oceanography of the Gulf of Mexico. (2-3). Credit 3. II**
Topography, stratigraphy, paleontology, and environments of the Gulf; littoral region and adjacent plains; forces acting on shorelines and bottoms; depositional surfaces, equilibria, equilibrium structures; tectonics; pleistocene history of region. Field trips. Prerequisites: Oceanography 431; undergraduate major in geology. Mr. Bader
- 641. Chemical Oceanography. (3-0). Credit 3. II**
Detailed study of selected topics in chemical oceanography which pertain to the Gulf of Mexico; industrial utilization of sea water and chemical products obtained from marine plants and animals; water freshening; industrial corrosion problems; chemical aspects of photosynthesis and fertility of the sea; chemistry of estuarine waters. Prerequisites: Oceanography 441; undergraduate major in chemistry; approval of the instructor. Mr. Hood
- 642. Laboratory Techniques in Oceanography. (0-6). Credit 2. I**
Detailed study will be made of methods of preparation and analysis of samples for biological, chemical, and geological investigations. The methods of analysis will concern oxygen, phosphate, silicate, nitrate, nitrite, salinity, carbon, sediment particle size, mineralogy, organic production, and others. Prerequisites: Oceanography 431, 441, 603, 610, 620, or approval of the instructor. Mr. Hood
- 643. Geochemistry of the Ocean. (3-0). Credit 3. I**
Geochemistry of the oceanic hydrosphere, biosphere, and lithosphere; how these are related to the atmosphere; study of the elements within them. Prerequisites: Oceanography 431, 441, and 641 or graduate classification in geology. (Offered in 1959-60 and in alternate years thereafter.) Mr. Hood
- 644. Geochemistry of the Ocean. (3-0). Credit 3. II**
A detailed critical study of the geochemistry of sedimentation, the geochemical evolution of the oceans, the biogeochemistry of calcium carbonate and isotope geochemistry as related to the ocean. Prerequisite: Oceanography 643. Mr. Hood
- 651. Meteorological Oceanography. (1-3). Credit 2. II**
The use of the conservative characteristics of the sea in forecasting meteorological and oceanographic phenomena. Calculation of ocean waves and swell, transformation of waves in shallow water, preparation of wave refraction diagrams and statistical summaries, modification of air masses in contact with the ocean, forecasting of fog and squalls, effect of the oceans upon climate of the world, meteorological tides. Prerequisite: Oceanography 610. Mr. Reid
- 652. Ocean Boundary Layer Problems. (3-0). Credit 3. I**
Theory of radiative exchange of energy at the sea surface; the theory of turbulent flow over hydrodynamically rough and smooth surfaces with application to the evaluation of the fluid frictional stresses at the boundaries of the sea, the evaluation of wind stress, evaporation, etc.; the micro-structure of temperature and salinity near the ocean surface; evaluation of turbulent exchange coefficients. Prerequisite: Oceanography 611. (Offered in 1958-59 and in alternate years thereafter.) Mr. Reid
- 681. Seminar. (2-0). Credit 2. II**
Presented by students and based upon their research work and upon surveys of the literature. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

A course offered to enable majors in oceanography to undertake and complete with credit in their particular fields of specialization limited investigations which do not fall within their thesis research and which are not covered by any other courses in the established curriculum. An example of the solution of a special problem in oceanography would be the work done in analyzing a special set of data collected on a cruise at sea. The course may also consist of a special series of problem discussions not given periodically, such as those offered by visiting scientists. Prerequisites: Oceanography 431, 441, 610. Staff

691. Research. Credit 1 or more each semester. I, II, S

For thesis or dissertation. Topic subject to approval of the Head of the Department. Staff

Department of Petroleum Engineering

J. W. AMYX, D. M. BASS, R. B. BOSSLER, P. B. CRAWFORD, H. T. KENNEDY*,
R. L. WHITING* (Head)

Graduate work in petroleum engineering is offered in both the master's and doctorate levels. On the master's level, courses are offered with the primary aim of giving the student a fundamental understanding of the performance of petroleum reservoirs, and their behavior under conditions imposed by pressure depletion, pressure maintenance, secondary recovery operations and cycling. Courses are also given which deal with the problems encountered in drilling and producing wells, and research on these problems is encouraged.

On the doctorate level, curricula are offered to give the student a broad understanding of the various phases of the petroleum industry as well as the ability to investigate and solve technical problems arising in the industry by original research. Laboratory facilities are available for advanced studies on all phases of reservoir equilibrium and mechanics, including equipment for work on permeability-saturation relationships, core analysis and interpretation, secondary recovery and model reservoir studies. Equipment is also available for investigating problems arising in subsurface engineering and in handling and formulating drilling fluids. Much special equipment has been provided for the study of reservoir behavior at high pressures and temperatures.

An outdoor equipment laboratory is available for those interested in oil field equipment design and experimental work. This laboratory contains six wells producing water from a depth of 450 feet, and the wells have been completed by the various known methods of completing oil wells. These wells are also equipped to produce water by methods used in oil field production, and test equipment is available for use with any study which the students might care to make.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

402. Petroleum Property Management. (3-0). Credit 3. II

Factors which influence the value of oil and gas properties; preparations of valuation reports, cost data, operating organization, regulation of petroleum production. Prerequisites: Petroleum Engineering 409, 413, 428. Mr. Bossler

405. Drilling and Production Design. (2-2). Credit 3. I

A study of the selection of drilling and production equipment used in oil field practice. Design of drilling and production systems. Prerequisites: Civil Engineering 305; Petroleum Engineering 305, 306, 307, 308. Staff

*Graduate Advisor

409. Subsurface Engineering. (1-3). Credit 2. I

Well logging, contour maps, isopachous maps, and the determination of the size, shape, and volume content of petroleum reservoirs. Prerequisites: Petroleum Engineering 305, 306, 307, 308. Staff

413. Natural Gas Engineering. (2-2). Credit 3. I

Theory of measurement, treatment and transportation of natural gas. Phase behavior of hydrocarbon mixtures and the production of natural gas liquids. Prerequisites: Chemistry 344; Mechanical Engineering 323; Petroleum Engineering 306. Mr. Bass

***413. Petroleum Measurement and Transportation. (2-2). Credit 3. I**

Theory and methods of gas and liquid measurements and transportation including mixed streams, horizontal and vertical flow, etc. Prerequisites: Mechanical Engineering 323; Petroleum Engineering 310. Mr. Bass

414. Petroleum Production Engineering. (3-0). Credit 3. II**

Gas lift, surface separation and treatment of oil field fluids. The measurement, sampling and testing of crude oil, tank strapping and preparation of tank tables, oil storage, the prevention of loss by evaporation, fire and lightning protection. Prerequisites: Petroleum Engineering 405, 413. Staff

415. Measurements Laboratory. (0-3). Credit 1. I

Methods of metering petroleum and natural gas. Study of flow of liquid gas and mixtures of gas and liquid. Advanced study of properties of petroleum at elevated pressure and temperature. Prerequisite: Petroleum Engineering 413 or registration therein. Staff

416. Oil Measurements and Transportation Laboratory. (0-3). Credit 1. II

Gauging practices, treating of oil-water emulsion, heat and sulphur content of petroleum and its products, determination of viscosity, gravity water content, carbon residue, and the coefficient of expansion of petroleum. Determination of vapor pressure of natural gasoline. Distillation of crude oil and gasoline. Methods of metering petroleum. Water analysis. Prerequisite: Petroleum Engineering 414 or registration therein. Staff

417. Petroleum Engineering Seminar. (0-2). Credit 1. I

The study and presentation of papers pertaining to recent developments in the field of petroleum engineering. Prerequisites: Petroleum Engineering 305, 306, 307, 308. Staff

418. Petroleum Engineering Seminar. (0-2). Credit 1. II

The study and presentation of papers pertaining to recent developments in the field of petroleum engineering. Prerequisites: Petroleum Engineering 305, 306, 307, 308. Staff

419. Drilling Fluids. (0-3). Credit 1. II

A laboratory course in which field technique control of mud fluids to facilitate drilling is taught. Prerequisites: Senior classification in petroleum engineering; approval of the Head of the Department. Mr. Whiting

428. Reservoir Engineering. (3-0). Credit 3*. I**

Material balance methods including identification of type of reservoir mechanism, future production under primary recovery and gas injection, water influx calculations. Prerequisites: Petroleum Engineering 306, 308, 310. Mr. Whiting

*Petroleum Engineering 413 to be described in this manner effective September 1959.

**Becomes (2-0), credit 2, effective February 1, 1960.

***Becomes (2-0), credit 2, effective September 1959.

429. Reservoir Mechanics Laboratory. (0-3). Credit 1. I

A laboratory course to supplement the theory of Petroleum Engineering 428. Advanced core analysis; fundamental tests of PVT properties of petroleum at reservoir conditions. Prerequisites: Petroleum Engineering 305, 306, 307, 308. Staff

438. Reservoir Engineering. (3-0). Credit 3*. II

Continuation of Petroleum Engineering 428. Displacement of oil by extraneous fluids, evaluation of performance of combination drive reservoirs, sweep efficiency. Prerequisite: Petroleum Engineering 428. Mr. Amyx, Mr. Bass

FOR GRADUATES**601, 602. Drilling and Completing Wells. (3-3). Credit 4 each semester. S**

An advanced study of the problems encountered in the drilling and completing of oil and gas wells. Prerequisite: Approval of Head of Department. Mr. Kennedy

603, 604. Advanced Reservoir Engineering. (3-3). Credit 4 each semester. I, II

An advanced course in petroleum production practices with special reference to the fundamental principles of flow of reservoir fluids. Prerequisite: Approval of Head of Department. Mr. Kennedy

605. Phase Behavior of Petroleum Reservoir Fluids. Credit 2 to 4 each semester. I

A study of the pressure, volume, temperature, composition relationships of petroleum reservoir fluids. Prerequisite: Approval of Head of Department. Mr. Kennedy

607. Recovery Methods. Credit 2 to 4 each semester. I

A study of methods of increasing recovery of petroleum from petroleum reservoirs. Prerequisite: Approval of Head of Department. Mr. Bossler

608. Well Logging Methods. (2-3). Credit 3. II

An advanced study of well logging methods for determining the nature and fluid content of formations penetrated by the drill. Prerequisite: Approval of Head of Department. Mr. Amyx

681. Seminar. (1-0). Credit 1 each semester. I, II

A study and presentation of papers on recent developments in reservoir mechanics. Prerequisite: Approval of Head of Department. Mr. Kennedy

685. Problems. Credit 1 to 4 each semester. I, II

A course offered to enable students to undertake and complete limited investigations which do not fall within their thesis research and which are not covered by any other courses in the curriculum. Prerequisite: Graduate classification. Mr. Kennedy

691. Research. Credit 1 or more each semester. I, II

Advanced work on some special problem within the field of petroleum engineering. A thesis course. Prerequisite: Approval of the Head of the Department. Mr. Kennedy

*Becomes (2-0), credit 2, effective February 1960.

Department of Physics

C. H. BERNARD, J. B. COON, MELVIN EISNER, J. S. HAM, AMBUJ MUKERJI,
J. G. POTTER* (Head), E. G. SMITH, E. E. VEZEY**, D. F. WEEKES

The present rapid advance in the development and application of fundamental physical theory has created unparalleled opportunities for specialists in the field. The offerings in physics enable graduates in physics, mathematics, chemistry, or engineering to prepare either for a career in applied physics and industrial research and development or for a career as a scientist in an industrial research or academic physics laboratory.

A comprehensive integrated coverage of the fields of classical and modern physics at the graduate level is afforded by the courses Physics 601, 603, 605, 612, 617, and 625, most of which are normally included in the program of a candidate for the Master's degree together with special work in the field of his thesis and in mathematics. More advanced courses in a number of fields are available primarily for candidates for the Doctor's degree. The current research activities of members of the Department in nuclear magnetic resonance, molecular structure, X-ray diffraction, the liquid state, ultrasonics, and nuclear phenomena and instrumentation afford superior opportunities for student research in these general fields.

A 100-milliwatt nuclear reactor provides opportunities for study and research in applied nuclear physics.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

301. Heat. (3-3). Credit 4. I

Heat transfer, specific heats, developments of thermodynamic concepts introducing statistical mechanics and kinetic theory, phase and change of state, and radiation. Prerequisites: Mathematics 210; Physics 204, 208, or 220. Mr. Smith

302. Mechanical Properties of Matter. (2-3). Credit 3. II

Rotational inertia, simple harmonic motion of translation and rotation, Kater's pendulum, gravitational fields and potential theory, gyroscopic motion, elasticity of beams, torsion, theory of elasticity, elasticity of fluids, surface tension and its application to the optimum shape for pressure vessels, diffusion, units and dimensions. Special attention is given to the setting up of equations representing physical facts, the interpretation of their solutions, and the determination of the limitations imposed by each approximation and assumption. Prerequisites: Mathematics 308 or registration therein; Physics 204, 208, or 220. Mr. Smith

311. Atomic and Nuclear Physics. (3-0). Credit 3. I

An introduction to the particles of modern physics, quantum theory, relativity, atomic structure, spectra, the periodic table, photoelectricity, thermionic emission, electrical phenomena in gases, x-rays, natural and induced radioactivity, nuclear structure and phenomena, the various means of transmutation, accelerating equipment, radiation measurements, pair and meson production, cosmic ray phenomena, nuclear forces, nuclear fission, nuclear reactor operation, isotope tracer techniques, and atomic energy. Prerequisites: Mathematics 210; Physics 204, 208, or 220. Staff

312. Atomic and Nuclear Physics. (2-0). Credit 2. II

An extension of Physics 311 to more specialized phases of molecular, atomic, and nuclear phenomena in so far as they may be treated without special mathematical methods and quantum mechanics. Prerequisite: Physics 311. Staff

*Graduate Advisor

**On leave of absence

317. Celestial Mechanics. (4-0). Credit 4. II

A mathematical formulation of the principles of celestial mechanics, including such fundamental astronomical principles as central forces, potential and attractions of bodies, the problem of two bodies, the problem of three bodies, the problem of n bodies, the laws of binary star systems, the determination of orbits, and perturbations. Prerequisites: Mathematics 210; Physics 204, 208, or 220. Staff

401. Optics. (3-3). Credit 4. II

A systematic treatment of physical and geometrical optics featuring applications to optical instruments. Prerequisites: Mathematics 210; Physics 204, 208, or 220. Mr. Weekes

405. Physical Mechanics. (3-0). Credit 3. I

A comprehensive formulation of the principles of mechanics employing the calculus and vectorial methods. Orbital motion, Coriolis accelerations, motions of rigid bodies, forced vibrations and resonance phenomena, wave propagation. Prerequisites: Mathematics 405 or registration therein; Physics 302 or the equivalent. Staff

407. Geophysical Theory. (3-0). Credit 3. II

The physical theory of each of the various geophysical methods used in petroleum exploration is developed from fundamental principles of elementary general physics. Prerequisites: Mathematics 210; Physics 204 or 208. Mr. Weekes

411. Experimental Modern Physics. (0-6). Credit 2. II

Selected practical topics of atomic and nuclear physics are pursued to the point where measurements and investigations are conducted in the laboratory. Prerequisite: Physics 311. Mr. Mukerji

413. Electricity and Magnetism. (2-3). Credit 3. I

DC and AC circuit theory, thermal and chemical electromotive forces, electrical instruments, electron emission. Prerequisites: Mathematics 308; Physics 204 or 219. Mr. Barker

414. Electricity and Magnetism. (1-3). Credit 2. II

Non-linear circuits, functions of tubes in electrical circuits, electronic circuits and circuit elements for physical measurements. Prerequisite: Physics 413 or approval of the instructor. Staff

416. Electromagnetic Fields. (3-0). Credit 3. II

Electric and magnetic field theory with emphasis on vector analysis and culminating in an introduction to electromagnetic radiation; properties of dielectrics and magnetic materials. Prerequisites: Mathematics 405; Physics 413; approval of the instructor. Staff

418. Theoretical Physics. (3-0). Credit 3. II

An introduction to theoretical physics with emphasis on fundamental concepts and general principles. Prerequisites: Mathematics 307; Physics 204 or 208, or 220. Staff

FOR GRADUATES**601. Analytical Mechanics. (4-0). Credit 4. I, S**

Dynamics of particles and of rigid bodies, gyrostatics, potential theory, Hamilton's principle, principle of least action, LaGrange's equations, and the Hamilton-Jacobi equation with applications. Prerequisites: Mathematics 405 or 601; Physics 405. Mr. Coon, Mr. Eisner

602. Fluid Mechanics and Elasticity. (4-0). Credit 4. II, S

Mechanics of continuous media. Foundations of elasticity with application to theory of beams, plates, and shells. Hydrodynamics of viscous and non-viscous fluids. Supersonic flow and shock wave propagation. Boundary layer theory. Lubrication theory. Prerequisite: Physics 601 or the equivalent. (Offered in 1958-59 and in alternate years thereafter) Mr. Eisner

603. Electromagnetic Theory. (4-0). Credit 4. II, S

Theory of electromagnetism; static and time-varying fields; propagation, reflection, and refraction of electromagnetic waves. Prerequisites: Mathematics 601 or the equivalent; Physics 416 or the equivalent. Mr. Weekes

605. Thermodynamics. (4-0). Credit 4. II, S

The fundamentals of classical thermodynamics including first and second laws, thermodynamic potentials, conditions for equilibrium, properties of gases; thermodynamics of electromagnetic systems, and a brief treatment of kinetic theory including Maxwell velocity distribution law, viscosity, and diffusion. Prerequisites: Mathematics 308; Physics 301 or the equivalent. Mr. Coon

607. Statistical Mechanics. (4-0). Credit 4. I

Fundamentals of statistical methods and their application to physical systems; ensembles; principles of classical statistics by most probable distributions and mean value distributions; Maxwell-Boltzman distributions; thermodynamics and statistics; statistical basis of entropy; Fermi-Dirac and Bose-Einstein statistics; degenerate electron gas applied to electronic phenomena in metals; degenerate Bose-Einstein statistics applied to liquid helium; Debye theory of specific heats; statistical mechanics in atomic and nuclear physics. Prerequisite: Approval of instructor. Mr. Ham

611. Advanced Optics. (4-0). Credit 4. I, S

The electromagnetic theory of optical phenomena in discontinuous, isotropic and anisotropic media. Prerequisite: Physics 603. (Offered in 1959-60 and in alternate years thereafter) Mr. Weekes

612. Atomic Structure. (3-0). Credit 3. I, S

A study of the atom and atomic spectra from the quantum mechanical viewpoint including the hydrogen atom, perturbation method, complex atoms, transition probabilities, angular momentum operators, multiplet structure of energy levels, fine structure and electron spin. Prerequisites: Mathematics 308 or the equivalent; Physics 311. Mr. Coon

614. Molecular Structure. (4-0). Credit 4. II

The quantum mechanical theory of valence; the hydrogen molecule ion, molecular orbitals for diatomic molecules, the hydrogen molecule; coulombic and exchange integrals; Pauli exclusion principle and the covalent bond; hybrid atomic orbitals; general molecular orbital method. Prerequisite: Physics 612. (Offered in 1958-59 and in alternate years thereafter.) Mr. Coon

617. Physics of the Solid State. (3-0). Credit 3. II

A study of the electrical, magnetic, thermal, and mechanical properties of crystalline solids. Lattice energy of ionic crystals, lattice vibrations, dielectric phenomena, luminescence and phosphorescence, electron theory of metals, band theory, semi-conductors, low temperature behavior of solids. Prerequisite: Approval of the instructor. Mr. Weekes

618. Nuclear Theory. (3-0). Credit 3. I

Application of quantum mechanics to nuclear phenomena. Prerequisite: Physics 311, 623, 625 or the equivalent. (Offered in 1959-60 and in alternate years thereafter) Mr. Eisner

623. Quantum Mechanics. (4-0). Credit 4. I, S

Foundations of quantum mechanics; theories of Heisenberg and De Broglie with applications especially to nuclear physics. Prerequisites: Mathematics 602 or the equivalent; Physics 601, 612, 625. Mr. Eisner

624. Quantum Mechanics. (4-0). Credit 4. II

A continuation of Physics 623. A postulational development of the foundations of quantum mechanics: classical foundations, Hamiltonian formalism, canonical transformations, representation and expansion theory, relativistic-quantum mechanics, quantum electrodynamics, quantum field theory, fundamental particles, meson field theories, and high energy phenomena. Prerequisite: Physics 623. (Offered in 1958-59 and in alternate years thereafter.) Mr. Eisner

625. Nuclear Structure. (3-0). Credit 3. II, S

Properties of fundamental particles; theory of simple nuclear models; scattering, spins, magnetic moments and cross sections; alpha, beta, and gamma decay; detection, measurement, and production of nuclear particles; nuclear spectroscopy; interactions of nuclear radiations with matter; nuclear reactions; high energy nuclear phenomena. Prerequisites: Mathematics 308, 601; Physics 312 or the equivalent. Mr. Mukerji

627. Relativity. (3-0). Credit 3. II

Special relativity and its application to covariant formulation of mechanics and electrodynamics. Theory of general relativity including development of necessary tensor calculus and non-Euclidean geometry. Predictions of general relativity and experimental tests of theory; cosmological problems and unified field theories. Prerequisites: Physics 601, 603. (Offered in 1959-60 and in alternate years thereafter) Mr. Eisner

631. Quantum Theory of Solids. (3-0). Credit 3. II

Development of solid state theory from the basic theory of quantum mechanics. Theory of perfect and imperfect crystal lattices. Interaction of electromagnetic radiation with non-conducting crystals. Electrons in perfect crystal lattices. Theory of metallic cohesion. Transport phenomena. Electric and magnetic properties of solids. Semiconductors, superconductors, superfluids. Prerequisite: Physics 617. Mr. Ham

633. Experimental Physics. (0-3). Credit 1. I

Experiments in atomic, nuclear, and solid state physics, designed to complement theory courses in these fields and to prepare the student for experimental research in physics. Prerequisite: Graduate classification. Staff

641. Teaching of High School Physics. (5-3). Credit 6. S

This course taught by members of the Physics faculty will aim to develop convictions concerning the fundamental principles of classical and modern physics which should be taught in a course in high school physics and to develop techniques and methods in preparing and conducting demonstrations and laboratory exercises. Prerequisites: Graduate classification; approval of the Heads of the Education and Physics Departments. Staff

661. Radiological Physics. (3-0). Credit 3. I

Interaction of radiation with matter, health physics and radiation protection, reactor sources of radiation shield design. Prerequisites: Chemical Engineering 447 or Physics 312; Mathematics 308. Mr. Bernard

663. Reactor Theory. (3-0). Credit 3 I

Mathematical theory of the diffusion and slowing down of neutrons in the homogeneous nuclear reactor without reflector and with reflector. Extensive problem work to illustrate the applications of the theory. Prerequisites: Mathematics 308, 601 or registration therein; Physics 312. Mr. Weekes

664. Reactor Theory. (3-0). Credit 3. II

A continuation of Physics 663. The steady state and transient behavior of the heterogeneous reactor. Theory of reactor control. Special mathematical methods in reactor analysis. Extensive problem work to illustrate the applications of the theory. Prerequisites: Mathematics 602 or registration therein; Physics 663. Mr. Weekes

665. Theory of Accelerators. (3-0). Credit 3. II

Description and classification of accelerators. Cockcroft-Walton accelerators, electrostatic generators; linear accelerators; theory of magnetic focusing; cyclotron; theory of electrostatic focusing; stability conditions, betatron; synchrocyclotron; synchrotron; low energy pulse devices; energy measurement and control; instrumentation and technique; reactions; radiological safety. Prerequisites: Mathematics 307; Physics 312. Mr. Mukerji

685. **Problems. Credit 1 to 4 each semester. I, II, S**
Individual problems not related to thesis. Staff
691. **Research. Credit 1 or more each semester. I, II, S**
Research toward thesis or dissertation. Staff

Physiology of Reproduction

A major in physiology of reproduction may be undertaken including appropriate courses in animal husbandry, biology, dairy science, genetics, and poultry science.

Plant Breeding

A major in plant breeding may be undertaken including appropriate courses in genetics and in agronomy, floriculture, or horticulture.

Department of Plant Physiology and Pathology

RICHARD BEHRENS, L. S. BIRD, D. R. ERGLE, M. C. FUTRELL, W. C. HALL,
A. L. HARRISON, H. E. JOHAM, D. C. NORTON, D. W. ROSBERG, R. B. STEWART,
G. M. WATKINS* (Head), P. A. YOUNG

Facilities are available for research on various phases of plant physiology and plant diseases. The major objectives are concerned with basic training in plant physiology and plant pathology for majors and minors in the plant sciences and also for the professional training of plant physiologists and plant pathologists. Greenhouse space and field plots are available for experimental work. Laboratory facilities include equipment for maintenance of microbiological cultures, preparation of slides for microscopic study, studies on effects of light on plants, and analysis of plant tissues for various chemical constituents. Special emphasis is placed on physiological studies of cotton, plant hormones, breeding for resistance to diseases of cotton, tomatoes, peanuts, and corn, and on new fungicides for various crops.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

314. Principles of Plant Physiology. (3-3). Credit 4. II

A more advanced and detailed study of the physiology of green plants than Plant Physiology and Pathology 313, with emphasis on water relations, mineral nutrition, photosynthesis, and growth. Prerequisites: Chemistry 231; Physics 213; Plant Physiology and Pathology 313. Mr. Hall

FOR GRADUATES

605. Plant Metabolism. (2-0). Credit 2. II

Photosynthesis and respiration are discussed in detail, including the history and recent developments in these fields. Prerequisite: Plant Physiology and Pathology 314, or Biochemistry and Nutrition 601 and approval of instructor. (Offered in 1959-60 and in alternate years thereafter.) Mr. Joham

607. Physiology of the Fungi. (3-0). Credit 3. I

A general course in the physiological activities of fungi, including growth and development, mineral nutrition, carbon and vitamin nutrition, the chemistry of metabolic products, fungicides, and the physiology of parasitism and resistance. Prerequisite: Plant Physiology and Pathology 314. (Offered in 1959-60 and in alternate years thereafter) Mr. Futrell

*Graduate Advisor

609. Quantitative Plant Physiology. (2-6). Credit 4. II

Methods employed in the various types of physiological investigations and the interpretation of results obtained by them. Prerequisite: Plant Physiology and Pathology 314. (Offered in 1959-60 and in alternate years thereafter) Mr. Joham

611. Plant Nutrition. (2-0). Credit 2. II

This course deals with the inorganic nutrition of plants. It includes solute absorption, accumulation and translocation; growth of plants in artificial media; physiological roles of various elements in the plant and biochemical problems associated with salt absorption. Prerequisite: Plant Physiology and Pathology 314 or equivalent. (Offered in 1958-59 and in alternate years thereafter) Mr. Joham

612. Phytohormones and Plant Growth Regulators. (3-0). Credit 3. II

This course includes material on the classification, properties, and action of naturally occurring plant hormones as well as a discussion of the synthetic growth regulators. Material is included on practical application and uses of phytohormones and growth regulators. Prerequisite: Plant Physiology and Pathology 314 or equivalent. (Offered in 1958-59 and in alternate years thereafter) Mr. Hall

613. Plant Growth and Development. (2-0). Credit 2. I

A course dealing with the growth, differentiation, and development of higher plants. A comprehensive study of vernalization and photoperiodism is included as well as a discussion of the influences of water relations, mineral nutrition, and hormones on the developmental cycle. Consideration is also given to differentiation within the plant as related to such qualities as winter hardiness and drought resistance. Prerequisite: Plant Physiology and Pathology 314 or equivalent. (Offered in 1958-59 and in alternate years thereafter) Mr. Joham

616. Methods in Plant Pathology. (2-6). Credit 4. II

A presentation of the methods by which plant diseases are identified and investigated. Emphasis is placed on preparation for research work in plant pathology. Prerequisite: Plant Physiology and Pathology 301 or the equivalent. (Offered in 1959-60 and in alternate years thereafter) Mr. Rosberg

617. Parasitism in Plant Disease. (3-3). Credit 4. II

A critical presentation of the literature on the invasion of plant tissues by parasitic bacteria, fungi, and nematodes. Mechanisms of host defense are examined. Processes are illustrated in the laboratory through the study of histological preparations and by experimentation. Prerequisites: Plant Physiology and Pathology 301. (Offered in 1958-59 and in alternate years thereafter) Mr. Futrell

618. Bacterial Plant Diseases. (2-3). Credit 3. I

A detailed study of bacterial diseases of fruit and vegetable crops, field crops and ornamental plants, with special emphasis upon the nature of the disease, dissemination of the pathogen and methods of control. Prerequisite: Plant Physiology and Pathology 301 or the equivalent. (Offered in 1959-60 and in alternate years thereafter) Mr. Rosberg

620. Plant Viruses. (2-0). Credit 2. I

Lecture presentation and discussion of the nature and properties of plant viruses. Methods of virus transmission, host plant reactions to viruses, serological reactions, and methods of purification of viruses for examination under the electron microscope, and the study of economically important plant virus diseases and their control. Prerequisite: Plant Physiology and Pathology 301 or the equivalent. (Offered in 1958-59 and in alternate years thereafter) Mr. Rosberg

621. Plant Parasitic Nematodes. (2-3). Credit 3. I

The morphology, identification, and biology of plant parasitic nematodes; the damage they cause; methods of control. Non-plant-pathogenic nematodes commonly found in the soil will be studied also. Prerequisite: Approval of the instructor. Mr. Norton

622. Plant Nematology. (1-6). Credit 3. II

Advanced study of the principal groups of plant parasitic nematodes, with emphasis on methods used in research. Prerequisite: Plant Physiology and Pathology 621. Mr. Norton

623. Diseases of Field Crops. (2-3). Credit 3. I

An intensive study of both the fundamental and the practical aspects of the more important and representative diseases of field crops. The plant disease problems peculiar to extensive cultivation methods will be stressed. Prerequisite: Plant Physiology and Pathology 301. Mr. Futrell

624. Diseases of Fruits, Vegetables, and Ornamentals. (2-3). Credit 3. II

Identification and control of the important diseases of fruit, vegetable and ornamental crops in Texas. Consideration will also be given to diseases of major berry crops and pecans. Various diseases and types of decay affecting products in shipment and storage will be studied. Each student will be required to carry out an inoculation-isolation exercise employing a bacterial or fungus pathogen. A virus inoculation exercise will be done by students working in pairs. Prerequisite: Plant Physiology and Pathology 301. Mr. Rosberg

681. Seminar. (1-0). Credit 1 each semester. I, II

Reports and discussions of topics of current interest in plant physiology and plant pathology, including reviews of literature on selected subjects. Staff

685. Problems. Credit 1 to 4 each semester. I, II

Individual problems or research not pertaining to a thesis or dissertation. Prerequisites: Plant Physiology and Pathology 314 or the equivalent (for physiology), 301 or the equivalent (for pathology). Staff

691. Research. Credit 1 or more each semester. I, II

Original investigations in support of thesis or dissertation. Staff

Biochemistry and Nutrition 601. Biochemistry of Plants. (3-0). Credit 3. I

A study of the major groups of organic compounds occurring in plants with emphasis on their biological synthesis, physiological function, and changes in chemical structure due to metabolic processes. Prerequisite: Biochemistry and Nutrition 410 or 611 or Chemistry 446. (Offered in 1959-60 and in alternate years thereafter.) Mr. Joham

Department of Poultry Science

See also Animal Breeding and Animal Nutrition

J. R. COUCH, T. M. FERGUSON, W. F. KRUEGER, G. J. MOUNTNEY, E. D. PARNELL,
J. H. QUISENBERRY* (Head), B. L. REID

Growth of the poultry industry and the need for a rapid expansion of scientific and technical knowledge in the various fields of science basic to successful poultry production have supplied the motivation for the development of graduate courses in this phase of agriculture. In no field of agriculture is an understanding of the science and practice of feeding, breeding, physiology, pathology, heating, ventilation, processing and marketing more necessary or more rewarded than in the modern intensive methods of producing poultry meat and eggs.

*Graduate Advisor

In offering graduate courses the major objectives of the Department are to offer training for work in teaching, research, or extension; to bridge the gap in both directions between courses in fundamental biochemistry, genetics, physiology, and economics and their practical application to poultry and poultry products; and to give men planning to go into some productive phase of poultry science a more thorough scientific background of knowledge and approach to problems than is possible in an average four-year college curriculum.

Through cooperation with the Departments of Agricultural Economics and Sociology, Biochemistry and Nutrition, Biology, and Genetics, the Department is in a position to offer graduate work in the fields of poultry genetics and breeding, poultry nutrition and feeding, incubation, brooding and rearing, poultry processing and marketing, and poultry products technology.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

401. Management and Selection. (2-2). Credit 3. II

How to select breeding males and females; culling the farm flock; planning a poultry program for a community with emphasis on good management and soundness of health; how to plan and manage county poultry shows. A thorough study of the National Poultry Improvement Plans, with enough practice work in selecting and testing to qualify students for official Plan participation. Mr. Parnell

411. Poultry Feeding. (3-2). Credit 4. I

The history of poultry nutrition, a short study of the chemical composition of carbohydrates, proteins, fats, vitamins, and mineral mixtures as found in poultry feeds. Composition, functions, sources, and care of vitamins commonly required for efficient poultry feeding. A study of the nutritive value of the different grains, roughages, mill feeds, and protein concentrates used in poultry nutrition. Practice work in the analysis of feedstuffs, the formulation of poultry rations, and diagnosis of lack of essentials in poultry rations. Prerequisites: Chemistry 223, 231. Mr. Couch

414. Poultry Breeding. (2-2). Credit 3. I

The basic principles of poultry breeding. The inheritance of characters of economic importance. The records essential for a sound breeding program; the selection of breeders on the basis of records and standard bred characteristics. Practice includes taking records on breeding birds, interpreting the records, and the techniques involved in pedigree breeding. Prerequisite: Genetics 301. Mr. Krueger

FOR GRADUATES

603. Principles and Practices of Incubation. (3-3). Credit 4. II

A study of the developmental stages of the chick during incubation. Correlation of development with genetic and environmental factors. Study of the fundamental principles underlying successful artificial incubation of eggs. Relation of egg characters to hatchability. Effects of pre-incubation treatment on hatchability of chicken and turkey eggs. Control of disease during the incubation process. Relation of maternal diet to embryonic development and hatchability of the chick. Prerequisite: Poultry Science 308 or equivalent. Mr. Krueger

604. Principles of Brooding and Rearing. (3-3). Credit 4. I

A study of principles involved in brooding poultry. Relative cost and efficiency of different brooding and rearing methods. Relation of brooding practice to growth, livability, and subsequent adult performance. Such factors as diet, levels of protein, minerals, vitamins, medicants, and growth stimulants are analyzed in relation to growth, livability, malformations, and feed efficiency. Physiological factors such as temperature control mechanisms and hormones are covered. Research methodology and thorough literature review are stressed. Prerequisite: Poultry Science 201 and 303 or equivalent. Mr. Krueger

611. Poultry Processing, Storing, and Distribution. (3-0). Credit 3. II

A study of egg quality and of egg quality maintenance. Effects of storage on egg and meat quality. The latest methods of processing eggs and poultry; feeding of market birds to improve grade; costs of production for various areas, and for various sized flocks and methods of management; planning optimum sized units for economical production. Prerequisites: Agricultural Economics 314 or equivalent; Poultry Science 407 or the equivalent. Mr. Parnell

612. Laboratory Problems in Poultry Processing, Storing, and Distribution. (0-3). Credit 1. II

A survey of improved methods of processing poultry and eggs. Certain selected modern processing plants will be visited and a study made of operating methods. Students may assist with experimental work in progress on poultry and egg processing and storage. Laboratory comparisons of various methods of fattening and their effects on market and storage quality of fowl. Effects of temperature and methods of dressing on market and storage quality. Prerequisite: Poultry Science 611 or registration therein. Mr. Parnell

613. Breeding and Genetics of Poultry. (3-3). Credit 4. II

Rapid and intensive survey of the mode of inheritance of the most important morphological and physiological characters in poultry. Analysis of the comparative efficiency of various systems of breeding in the improvement of poultry. Scientific journals and technical literature reviewed. Research methods discussed. Prerequisite: Poultry Science 414 or the equivalent. Mr. Krueger

681. Seminar. (1-0). Credit 1 each semester. I, II

Intensive review and reporting of literature on poultry feeding, breeding, incubation, marketing, and management problems. Development of familiarity not only with literature but with organizations, agencies, and personnel working with poultry problems. Prerequisite: Graduate classification. May be repeated as many semesters as desired but maximum of two credits allowed towards Master's degree. Mr. Quisenberry

685. Problems. Credit 1 to 6 each semester. I, II

An intensive study of newer principles and methods in the various specialized fields related to successful poultry production. Prerequisite: Approval of the Head of the Department. Staff

691. Research. Credit 1 or more each semester. I, II, S

Intensive study of research methods and techniques in poultry breeding, nutrition, physiology, physical aspects of marketing, or poultry products technology. Students will be required to carry out some experimental project in one of these fields. Reviews of specific literature, collection, analysis, and presentation of experimental data will be stressed. Designed for thesis credit. Staff

Department of Range and Forestry

R. A. DARROW, F. W. GOULD, W. G. McCULLY, JUDD MORROW, R. R. RHODES, O. E. SPERRY*, G. W. THOMAS, W. J. WALDRIP, V. A. YOUNG* (Head)

Research in progress in range and forestry deals with the fundamental and practical problems associated with the management of range lands. This includes studies on proper utilization, range ecology, range deterioration, soil and water conservation, range reseeding, and revitalization practices of range and forest areas. Other specific problems deal with eradication and control of brush and poisonous plants and the application of proper management practices.

*Graduate Advisor

The natural plant resources of Texas are adapted to the various phases of research in the Department. An experimental range of approximately 1200 acres near the College is used for research. Several of the sub-stations of the Texas Agricultural Experiment Station cooperate on experimental projects. Many small grazing areas as well as outstanding ranches throughout the State lend themselves to our research needs. Equipment and supplies for range research are maintained to meet all the demands of the problems undertaken.

Students who take work in the Department of Range and Forestry must have adequate preparation in botany, agronomy, and animal husbandry, as well as in the fundamentals of economics, chemistry, and mathematics.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

301. Plant and Range Ecology. (2-3). Credit 3. II

An analysis of habitat factors as they influence plant growth. Attention is given plant succession, competition, distribution, and detailed methods of studying and mapping vegetation. Prerequisite: Biology 102. Mr. Sperry

303. Agrostology. (2-3). Credit 3. I

A fundamental study of grasses, especially those of economic importance in Texas. A study of the characteristics of the various genera and species of grasses, their identification, distribution, propagation, improvement, and management with particular reference to their use and value in Texas ranges and pastures. Prerequisite: Biology 102 or equivalent. Mr. Gould, Mr. Sperry

304. Range Management. (2-3). Credit 3. I

A technical course dealing with problems met in managing native range lands, including a study of grazing regions and the problems of each; revegetation of range lands; maintenance of production; utilization of range forage; and range livestock management as it affects vegetation. Field trips. Prerequisites: Range and Forestry 301, 303. Mr. Young

408. Range Problems. Credit 1 to 3. I, II, S

Individual study and research upon a selected range problem approved by instructor. Staff

409. Advanced Range Management. (2-3). Credit 3. II

A technical course dealing with the more advanced problems in managing native range lands. Special attention will be given to the development of the range industry, cost of production, range land utilization, organization of cattle, sheep, and goat industry; and range condition classes. Field trips. Prerequisite: Range and Forestry 304 or 401 with approval of instructor. Mr. Young

411. Field Range Management. Credit 2 or 3. S

A semi-technical summer field course in which emphasis is placed upon identification of important range plants; determination of vegetation types, sub-types, forage utilization values, range condition classes, mapping; brush eradication and control, and proper distribution of livestock. A summer field course primarily for county agricultural agents and vocational agricultural teachers, others by approval of instructor. Mr. Sperry, Mr. Young

FOR GRADUATES

605. Range Research Methods. Credit 2. I

A study of research methods in range management and related subjects. A review of scientific investigation in the field and analysis of results. Prerequisite: Graduate majors in range and forestry. Mr. Darrow, Mr. Young

606. Range Economics. (2-0). Credit 2. II

Range management practices, land utilization, and ranch operation as they affect economics of livestock industry and the nation. Prerequisite: Graduate majors and minors in range and forestry. Mr. Young

607. Vegetation Influences. (3-0). Credit 3. I

Interrelationships between ecological factors and vegetation, influence of forest and range vegetation on watershed management and soil conservation. Field trips to be arranged. Prerequisite: Range and Forestry 301. (Offered in 1959-60 and in alternate years thereafter) Mr. Darrow

609. Plant and Range Ecology. (2-3). Credit 3. II

A detailed study of plant communities, successions, and the effect of various degrees of utilization in vegetation types and edaphic factors. Prerequisite: Range and Forestry 301 or equivalent. (Offered in 1958-59 and in alternate years thereafter) Mr. Sperry

610. Range Grasses and Grasslands. (2-3). Credit 3. II

A study of range grasses as applied to utilization and sustained production. The ecological characteristics and geographical features of the native grasslands. Ecological principles as applied to range problems. Individual problems to be assigned. Prerequisites: Range and Forestry 301, 303; approval of Head of Department. Mr. Gould

611. Control of Noxious Range Plants. (3-0). Credit 3. I

An advanced study of native and naturalized noxious and poisonous plants on Texas ranges that are detrimental to good management practices. Their distribution, reproduction, dissemination, and methods and practices of control will be stressed in relation to conservation and economic importance. Field trips to be arranged. (Offered in 1958-59 and in alternate years thereafter) Mr. Sperry

612. Range Management Practices, Policies, and Administration. (3-0). Credit 3. I

Advanced studies dealing with technical range management problems, social and economic background of legislation and policies developed in the acquisition and administration of national, state, and private range properties. Field trips to be arranged. Prerequisite: Range and Forestry 409 or equivalent. (Offered in 1959-60 and in alternate years thereafter) Mr. Young

681. Seminar. (1-0). Credit 1 each semester. I, II

Current scientific work in range management and related subjects in American and foreign fields. Prerequisite: Majors and minors in range and forestry. Staff

685. Problems. Credit 1 to 4 each semester. I, II, S

A course designed for investigations not included in the student's research for thesis or dissertation. Problems may be selected in applied ecology, range management or forestry. Lectures, conferences, field work, reports. Prerequisite: Graduate majors or minors in range and forestry. Staff

691. Research. Credit 1 or more each semester. I, II, S

Research for thesis or dissertation. Prerequisite: Graduate majors in range and forestry. Staff

Soil Chemistry

See Department of Agronomy.

Soil Physics

See Department of Agronomy.

Department of Veterinary Anatomy

L. W. GIBBS, J. H. MILLIFF* (Head)

FOR GRADUATES AND ADVANCED UNDERGRADUATES

- 301. Anatomy. (0-9). Credit 3. I** †
The osteology, dentition, and arthrology of the domestic animals and topographical dissection of the dog. Staff
- 302. Anatomy. (0-9). Credit 3. II** †
Topographical dissection of the cow and a comparative study of the horse, cat, and pig. Prerequisite: Veterinary Anatomy 301. Staff
- 303. Histology. (2-6). Credit 4. I** †
A microscopic study of the basic tissues and of the organs, excluding the organs of reproduction. Staff
- 304. Embryology. (3-3). Credit 4. II** †
A microscopic study of the reproductive organs of the domestic animals, and of serial sections of chick and pig embryos. Prerequisites: Veterinary Anatomy 301, 303. Staff
- 306. Neuroanatomy. (0-6). Credit 2. II**
Gross, developmental, and microscopic anatomy of the nervous system. Prerequisite: Veterinary Anatomy 303. Staff
- 501. Surgical Anatomy. (0-6). Credit 2. I**
The anatomy of the areas of surgical and clinical importance in the domestic animals. Prerequisite: Veterinary Anatomy 302. Staff

FOR GRADUATES

- 601. Veterinary Anatomy. (1-3). Credit 2 each semester. I, II**
The gross, developmental, and microscopic structure of the anatomical systems of domestic animals. Prerequisites: Veterinary Anatomy 306; approval of Head of Department. Staff
- 681. Seminar. (1-0). Credit 1. S**
The review and discussion of current scientific work in anatomy and related subjects. Prerequisite: Graduate major or minor in veterinary anatomy. Staff
- 685. Problems. Credit 1 to 4 each semester. I, II, S**
Problems in either gross or microscopic anatomy along lines to be chosen by the individual. Prerequisites: Veterinary Anatomy 306; approval of the Head of the Department. Staff
- 691. Research. Credit 1 or more each semester. I, II, S**
Original research on a selected thesis problem in anatomy. Prerequisite: Graduate major in veterinary anatomy. Staff

Department of Veterinary Medicine and Surgery

W. C. BANKS, C. W. SCHULZ* (Head)

FOR GRADUATES AND ADVANCED UNDERGRADUATES

- 561. Clinical Laboratory Diagnosis. (0-2). Credit 1. I**
Instruction in routine laboratory procedures including hematology, urine analysis, radiography, and radiation therapy. Prerequisites: Veterinary Medicine and Surgery 520; Veterinary Microbiology 436. Staff

*Graduate Advisor

†May be taken for graduate credit by students not majoring in veterinary medicine.

FOR GRADUATES

603. Veterinary Surgery. Credit 1 to 8 each semester. I, II

Special surgery of large or small animals. Prerequisite: Degree of Doctor of Veterinary Medicine or appropriate specialized training. Staff

685. Problems. Credit 1 to 8 each semester. I, II

Original investigations of problems in the field of surgery, therapeutics, or radiology. Prerequisite: Degree of Doctor of Veterinary Medicine or appropriate specialized training. Staff

691. Research. Credit 1 or more each semester. I, II

Research for thesis. Staff

Department of Veterinary Microbiology

D. E. DAVIS, L. C. GRUMBLES* (Head)

FOR GRADUATES AND ADVANCED UNDERGRADUATES

435. Microbiology and Immunology. (3-4). Credit 4. I †

The principles of microbiology and immunology. Emphasis is placed on the general morphology, physiology, and immunologic reactions of microorganisms important in veterinary medicine. Special attention is given to the biologics in the diagnosis and treatment of infectious diseases. Prerequisite: Second year classification in veterinary medicine. Staff

436. Pathogenic Microbiology. (3-3). Credit 4. II †

A study of the general staining procedures, cultural methods and media preparation for bacteria; and the morphology, cultural characteristics, and pathogenicity of microorganisms which produce diseases in domestic animals and man. Prerequisite: Veterinary Microbiology 435. Staff

FOR GRADUATES

643. Veterinary Microbiology. (3-4). Credit 4. I, II

A study of the pathogenic microorganisms; their cultural and biological characteristics and pathogenicity. Mr. Grumbles

646. Avian Virus Diseases. Credit 1 to 4. I, II

A study of the viral diseases of poultry including methods of isolation and identification of the causative agents. Practice consists of conducting post mortem examinations and special diagnostic procedures on birds received daily for necropsy. Prerequisite: Degree of Doctor of Veterinary Medicine or equivalent. Mr. Grumbles

647. Veterinary Virology. Credit 1 to 4. I, II

A detailed study of virus infections in animals, including types of infections, mode of transmission, intracellular pathology, epidemiology, isolation and identification of the inciting agents. Practice includes tissue cultivation, animal inoculations, and diagnostic tests. Prerequisite: Degree of Doctor of Veterinary Medicine or equivalent. Mr. Grumbles

648. Veterinary Mycology. Credit 1 to 4. II, S

A study of actinomycetes, yeasts, and molds that are pathogenic to man and animals; the morphology, cultural characteristics, pathogenicity and identification. Practice consists of exercises in cultural methods, morphological characteristics, biochemical reactions and diagnosis. Prerequisite: Degree of Doctor of Veterinary Medicine or equivalent. Mr. Grumbles

*Graduate Advisor

†May be taken for graduate credit by students not majoring in veterinary medicine.

685. Problems. Credit 1 to 4 each semester. I, II

Problems course in microbiology and hematology. Prerequisite: Degree of Doctor of Veterinary Medicine. (May be taken for undergraduate credit with permission of the Head of the Department.) Staff

691. Research. Credit 1 to 8. I, II

An original problem in veterinary microbiology. This research to be reported by a thesis as partial requirement for the Master of Science degree. Prerequisite: Admission to candidacy for Master of Science degree. Staff

Department of Veterinary Parasitology

See also Animal Parasitology.

S. M. GAAFAR, R. D. TURK* (Head)

FOR GRADUATES AND ADVANCED UNDERGRADUATES

481. Parasites of Domestic Animals. (2-2). Credit 3. I †

Internal parasites of domestic animals. Symptoms, diagnosis, treatment, control and eradication of parasitic diseases are emphasized. Practice consists of laboratory and diagnostic methods used in parasitology. Fresh and preserved material obtained from the field, clinics, and necropsies are utilized. Prerequisite: Veterinary Anatomy 302. Staff

482. Parasites of Domestic Animals. (2-2). Credit 3. II †

Internal parasites of farm, pet, and fur-bearing animals. Attention is given to symptoms, diagnosis, treatment, control, and eradication of parasitic diseases. Practice consists of laboratory and diagnostic methods used in parasitology; the pathology of parasitism. Fresh and preserved material obtained from the field, clinics, and necropsies are utilized in the laboratory. Prerequisite: Veterinary Parasitology 481. Staff

487. Parasites of Farm Animals and Poultry. (2-2). Credit 3. II, S

A study of some of the more important internal and external parasites of domestic animals and poultry. The life cycles, pathogenicity and economic and public health aspects will be stressed with suggested methods for control. Open to agricultural students. Prerequisite: Senior classification. Mr. Gaafar

FOR GRADUATES

601. Parasitology. Credit 1 to 4 each semester. I

A detailed study of the more important helminth parasites of domestic animals, including their identification, distribution, and life history. Prerequisite: Veterinary Parasitology 586 or the equivalent. Mr. Turk

685. Problems. Credit 1 to 4 each semester. I, II, S

Special problems concerned with the parasites of domestic animals or poultry. Prerequisites: Veterinary Parasitology 601 or the equivalent; approval of the instructor. Mr. Turk

691. Research. Credit 1 or more each semester. I, II, S

Research for thesis. Mr. Turk

*Graduate Advisor

†May be taken for graduate credit by students not majoring in veterinary medicine.

Department of Veterinary Pathology

I. B. BOUGHTON, C. H. BRIDGES, H. A. SMITH* (Head)

FOR GRADUATES AND ADVANCED UNDERGRADUATES

447. General Principles of Pathology. (2-2). Credit 3. I, S

A study of the mechanisms of disease as encountered in the higher mammalian species. The course deals with the causes and pathogenesis of the various types of disease, the reactions of the body against them, and certain abstract principles governing their treatment. Open to non-medical students. Lectures and demonstrations. Prerequisites: Six hours of biological sciences; junior classification. Mr. Bridges, Mr. Smith

FOR GRADUATES

643. Gross Pathology. Credit 1 to 6. I, II, S

The student studies gross pathological changes at the necropsies performed daily. He then follows selected tissues through suitable histopathological techniques and corrects his gross diagnosis in the light of the microscopic findings. Confirmatory bacteriologic methods are utilized where indicated. Prerequisite: Degree of Doctor of Veterinary Medicine or equivalent. Mr. Bridges, Mr. Smith

644. Locomotor and Skeletal Diseases. Credit 1 or 2. I, S

The changes taking place in diseased bones, joints, and muscles are studied with respect to their nature and probable causes, and with especial reference to lameness of the horse. Frequent use is made of the unsurpassed Mark Francis Collection of Bone and Joint Pathology. Prerequisite: Degree of Doctor of Veterinary Medicine or equivalent. Mr. Bridges, Mr. Smith

645. Neoplastic Diseases. Credit 1 to 8. I, II, S

Theoretical, histopathological, and clinical aspects of neoplasms. Diagnosis of neoplastic and related conditions in all species. Prerequisite: Degree of Doctor of Veterinary Medicine or the equivalent. Mr. Bridges, Mr. Smith

646. Nutritional Diseases. Credit 2 to 4. II

Gross and microscopic tissue changes to be found in experimentally produced nutritional deficiencies are considered in comparison with clinically encountered deficiencies and with other conditions from which they must be differentiated. Prerequisite: Degree of Doctor of Veterinary Medicine or other suitable preparation. Mr. Bridges, Mr. Smith

647. Metabolic Diseases. Credit 1 or 2. S

The pathology of diseases due to major disorders of metabolism, non-nutritional and non-infectious. Prerequisite: Degree of Doctor of Veterinary Medicine or equivalent. Mr. Bridges, Mr. Smith

648. Reproductive Diseases. Credit 1 to 4. S

Theoretical and practical pathology of gross and microscopic lesions in the reproductive organs with special reference to bovine sterility. Prerequisite: Degree of Doctor of Veterinary Medicine or equivalent. Mr. Bridges, Mr. Smith

650. Neuropathology of Animals. Credit 1 to 4. I, S

In addition to the study and interpretation of gross and microscopic lesions of the central and peripheral nervous systems, major attention is given in theory and in practice to the special laboratory techniques necessary to demonstrate such lesions. Prerequisite: Degree of Doctor of Veterinary Medicine or equivalent. Mr. Bridges, Mr. Smith

658. Pathological Technique. Credit 1 to 6. I, II, S

The art and science of preparing animal tissues, fluids, and exudates for microscopic or other special examination. Enrollment is limited to the number who can be accommodated in the routine of the departmental laboratory. Prerequisite: A fair knowledge of general chemistry. Mr. Bridges, Mr. Smith

*Graduate Advisor

659. Sheep Diseases. Credit 1 to 4. I

The pathology, etiology, and symptomatology of the economically important diseases affecting sheep in all of the major sheep-producing countries of the world. Prerequisite: Degree of Doctor of Veterinary Medicine or the equivalent. Mr. Boughton

691. Research. Credit 1 or more each semester. I, II, S

Research to be reported by the writing of a thesis or dissertation as a partial requirement for the M.S. or Ph.D degree. Mr. Bridges, Mr. Smith

Department of Veterinary Physiology and Pharmacology

P. W. BURNS* (Head)

FOR GRADUATES AND ADVANCED UNDERGRADUATES

326. Physiology. (4-3). Credit 5. II †

Introduction to physiology. Dynamics of nerve and muscle. Functions of the circulatory and respiratory systems. Renal function and body fluids. Mechanisms of digestion, absorption, and excretion. Prerequisites: Biochemistry and Nutrition 312; Veterinary Anatomy 301, 303, registration in 302, 304, 306. Mr. Burns

427. Physiology. (2-6). Credit 4. I †

Metabolism and energy exchange. Minerals and vitamins. Functions of the nervous, endocrine, and reproductive systems. Milk secretion and growth. Prerequisite: Veterinary Physiology and Pharmacology 326. Mr. Burns

FOR GRADUATES

601, 602. Animal Physiology. (3-3). Credit 4 each semester. I, II

Recent phases of physiology; modern experimental methods. The work is arranged to suit the needs of the student and in harmony with his previous training. Prerequisite: Basic courses in morphology and organic chemistry. Mr. Burns

605, 606. Veterinary Toxicology. (3-3). Credit 4 each semester. I, II

Original investigations and detailed studies of poisons or poisonous plants and their effects on domestic animals. Prerequisite: Veterinary Physiology and Pharmacology 530. Mr. Burns

607, 608. Veterinary Pharmacology. (3-3). Credit 4 each semester. I, II

Modern methods of research in pharmacology and pharmaceutical processes. Original research in studying the actions and uses of drugs. Prerequisites: Veterinary Physiology and Pharmacology 428, 529. Mr. Burns

611, 612. Veterinary Physiology. (3-3). Credit 4 each semester. I, II

A detailed study of specific phases of physiology of domestic animals. Prerequisites: Veterinary Anatomy 303, 304; Veterinary Physiology and Pharmacology 427. Mr. Burns

685. Problems. Credit 1 to 4 each semester. I, II, S

Problems in physiology, pharmacology, or toxicology. Prerequisite: Degree of Doctor of Veterinary Medicine or appropriate specialized training. Mr. Burns

*Graduate Advisor

†May be taken for graduate credit by students not majoring in veterinary medicine.

Department of Veterinary Public Health

F. P. JAGGI* (Head)

FOR GRADUATES

601. Food Hygiene. (3-4). Credit 4. I

The study of causes and evidence of spoilage, and the detection of adulterants in fresh, canned, and cured foods of animal origin. Prerequisite: Veterinary Public Health 591 or 592. Mr. Jaggi

685. Problems. Credit 1 to 4 each semester. I, II

Problems course in veterinary public health. Prerequisite: Degree of Doctor of Veterinary Medicine. (May be taken for undergraduate credit with permission of the Head of the Department.) Mr. Jaggi

Department of Wildlife Management

R. J. BALDAUF, W. B. DAVIS* (Head), K. L. DIXON, O. C. WALLMO

Graduate work in the Department of Wildlife Management is intended to train the student in original work in vertebrate systematics, ecology, and management. Graduates in this field should be well equipped for a variety of work in vertebrate systematics and ecology, whether in museum, college, or university teaching, wildlife or park management, or various phases of land use.

Lines in which this department is especially qualified to direct graduate research are: (1) ecology, life history, and management of vertebrates; (2) their distribution, differentiation, and taxonomy; and (3) limnology. Facilities are available through cooperative arrangements with the Texas Game and Fish Commission for students to work on problems basic to the management of both game and non-game species of wildlife and to pursue basic investigations in both fresh water and salt water fisheries. The Department has a research and reference collection of some 40,000 fish, 11,000 amphibians and reptiles, 6,000 birds, 6,500 mammals, and can secure additional materials on loan from other institutions for use in distributional and taxonomic studies.

FOR GRADUATES AND ADVANCED UNDERGRADUATES

311. Ichthyology. (Fresh Water). (2-3). Credit 3. I

This course is designed to familiarize the student with the fresh-water fishes of the world. The approach to the subject matter will be mainly systematic, but the evolution, ecology, life history and economy of the more important species will be treated. The fresh-water fishes of Texas will be emphasized and the practice will consist of the identification of 75-100 fish. Prerequisite: Biology 107. Mr. Baldauf

312. Ichthyology. (Marine). (2-3). Credit 3. II

A study of the marine fishes of the world, emphasizing fishes of Texas. Life history, ecology, distribution, evolution, and economic values of important species will be treated. Prerequisite: Biology 107. (Offered in 1959-60 and in alternate years thereafter.) Mr. Baldauf

315. Herpetology. (2-2). Credit 3. II

An introduction to the study of the structure, adaptation, classification, distribution, and economic importance of amphibians and reptiles. Prerequisite: Biology 107. Mr. Baldauf

401. General Mammalogy. (2-2). Credit 3. I

Study of the structure, classification, and economic relations of mammals. Foundation for wildlife management, also for museum work. Prerequisite: Biology 107. Mr. Davis

*Graduate Advisor

402. General Ornithology. (2-2). Credit 3. I

Introduction to the study of birds, their structure, classification, geographic distribution, ecologic relations, and economic status. Foundation for wildlife management, also for museum work. Prerequisite: Biology 107. Mr. Dixon

403. Animal Ecology. (2-3). Credit 3. I

Composition, structure, and energy relationships of plant-animal communities. The interaction of physical and biotic factors as they affect population levels and community development. Application of ecological principles to some current land use practices. Prerequisite: Range and Forestry 301. Mr. Dixon

408. Techniques of Wildlife Management. (2-3). Credit 3. II

Methods and techniques in maintaining and increasing desirable wildlife and regulating population generally, with emphasis on practical aspects. Use of natural vegetation, the place and methods of census, restocking, game preserves, predatory animal control, provision of food and cover, farmer-sportsman relations, significance of succession, and other ecologic concepts to game management and related enterprises. Prerequisite: Senior classification in wildlife management or approval of instructor. Mr. Wallmo

417. Biology of Fishes. (2-2). Credit 3. I

Treats the biology of fishes, including respiration, sense organs, feeding habits, breeding habits, anatomy, and adaptations to the environment. Emphasis will be placed upon the various physiological and morphological features of fishes, particularly as they relate to problems of distribution, populations, and management in Texas. Prerequisite: Biology 107. (Offered in 1959-60 and in alternate years thereafter.) Mr. Baldauf

FOR GRADUATES**601, 602. Vertebrate Systematics. (1-6). Credit 3 each semester. I, II**

The theory and practice of taxonomy as applied to vertebrates. Laboratory consists of individual problems on classification and distribution of selected groups of vertebrates; problems in nomenclature of birds, mammals, fishes and reptiles, based on Texas Cooperative Wildlife Collection. Survey of the literature of vertebrate taxonomy as related to the group selected; a study of vertebrate material from the systematic standpoint. Prerequisites: Wildlife Management 311, 315, 401, or 402, depending on group selected. (Offered in 1958-59 and in alternate years thereafter.) Staff

603. Vertebrate Ecology. (1-6). Credit 3. II

The ecology and life histories of vertebrates with special reference to birds and mammals. The role of native vertebrates in relation to range, forest, and farm problems. Consideration will be given to community and environmental relations. Prerequisite: Wildlife Management 403 or equivalent. (Offered in 1958-59 and in alternate years thereafter.) Mr. Wallmo

608. Techniques of Wildlife Management. (2-0). Credit 2. II

Special techniques and current development in wildlife management practices. Prerequisite: Wildlife Management 408 or equivalent. (Offered in 1958-59 and in alternate years thereafter.) Mr. Wallmo

609. Wildlife Research Methods. (2-0). Credit 2. I

A study of research methods as applied to wildlife management. (Offered in 1958-59 and in alternate years thereafter.) Mr. Dixon

681. Seminar. (1-0). Credit 1 each semester. I, II

Important current developments in the wildlife field with special reference to the literature. Prerequisite: Senior or graduate classification. Staff

685. Problems. Credit 2 to 6 each semester. I, II, S

Credit to be adjusted in accordance with requirements of each individual case. Staff

691. Research. Credit 1 or more each semester. I, II, S

Original research on selected wildlife problem to be used in thesis or dissertation. Staff
