Moa Screen shots:

What we learned from Moa

- Changing the look-and-feel for individual communities is useful.
- XSL based Themes work.
- DSpace needs an interface modularity system.
- Themes should use metadata in native formats.

What does Manakin add?

- Manakin is the next version of the XML UI project
 - Based upon the Apache Cocoon framework
 - Designed using Separation of Concerns
 - Uses a SAX based pipeline
 - Current source code available via CVS at:
 - http://di.tamu.edu/projects/xmlui/manakin/
- These technologies enable
 - N-stage pipeline architecture
 - UI Modularity
 - Parallel Development

Manakin vs JSP UI

Current JSP based interface

- No presentation layer
- Difficult to extend (and maintain!)
- Heavy use of HTML table layout

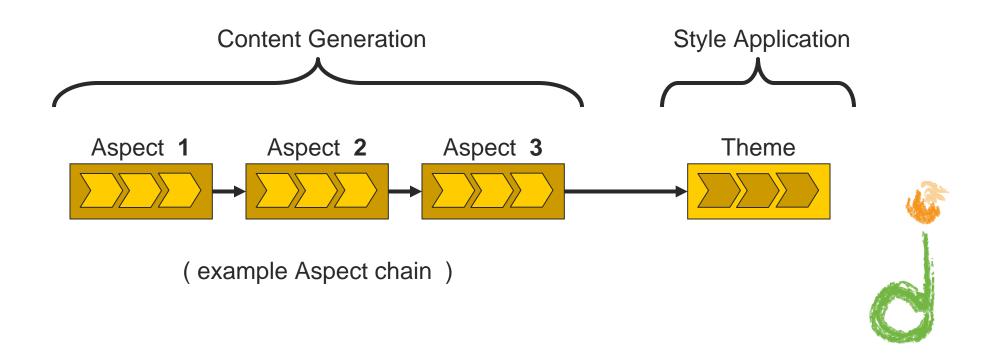

Manakin

- Separate presentation layer
- Ability to extend
- Themes per communities / collections
- Metadata in native formats

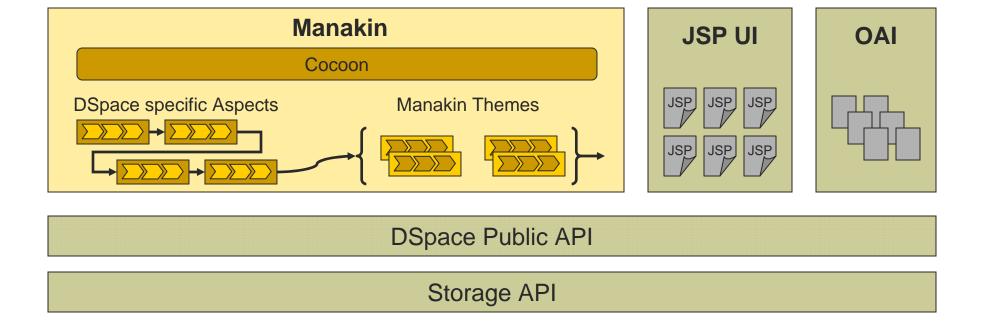

Manakin Structural Overview

Manakin uses a pipeline architecture composed of two parts:
