PREFACE

A revision of the Author Catalogue of the Index-Catalogue of Medical and Veterinary Zoology, consisting of Parts 1 to 18, was published during the period 1932-52. Beginning in 1953, a series of supplements designed to publish the backlog was initiated. This was completed with Supplement 6, published in 1956; since then supplements covering authors A to Z have been issued on an annual basis.

Beginning with Supplement 15, the Parasite-Subject Catalogues, containing indices to the author references, are being issued. The Author Catalogue continues the format of previous supplements. The users should note that for each reference in the Author Catalogue, the author(s) plus the date and letter (e.g., Smith, J.; and Doe, X., 1963 b) are the key to all items in the Parasite-Subject Catalogues derived from that reference. In other words, when using the Parasite-Subject Catalogues, it will be necessary to consult the Author Catalogue for complete bibliographical information.

The following are the parts of each supplement:

- Part 1, Authors: A-Z
- Part 2, Parasite-Subject Catalogue: Parasites: Protozoa
- Part 3, Parasite-Subject Catalogue: Parasites: Trematoda and Cestoda
- Part 4, Parasite-Subject Catalogue: Parasites: Nematoda and Acanthocephala
- Part 5, Parasite-Subject Catalogue: Parasites: Arthropoda and Miscellaneous Phyla
- Part 6, Parasite-Subject Catalogue: Subject Headings and Treatment
- Part 7, Parasite-Subject Catalogue: Hosts

It is hoped that these Catalogues will serve as a useful tool to workers in the field of parasitology. Persons using this catalogue are requested to preserve it because it is not designed for general distribution and the edition is limited. Reprints of papers on parasitology are requested.

EXPLANATORY NOTE

Format: The entries are presented in two double columns. Names of hosts are given in the left half of each column, and the authors of publications with the dates and necessary code letters (e.g., Smith, J.; and Doe, X., 1963 b) are given in the right half of each column.

Alphabetization: In the left half of each column the entries are arranged alphabetically by genera, common names, and higher taxa, and then alphabetically by species within genera. Nominal subspecies are interfiled with the species. Entries for each host are arranged according to parasite phyla in the following order: Protozoa, Trematoda, Cestoda, Nematoda, Acanthocephala, Arthropoda, Miscellaneous Phyla, and General. Within each phylum grouping, the entries are in turn arranged in the right half of each column alphabetically by authors and then chronologically for each author.

Subheadings, left half of column: Indented beneath each host entry will be found all the parasites of a particular phylum that were reported from this host in the paper in question. Body locations of these parasites will be found in parentheses () either in the subheading or with the host name. Experimental infection of the host is reported as such.

Subheadings, right half of column: Subheadings under the authors give geographic distribution. When there are multiple parasites and geographic localities, the appropriate locality is recorded opposite each parasite name; when the parasites from this host are all from one locality, they are recorded as "all from" this locality.

General: When authors use only common names of hosts, scientific names are cautiously supplied from authoritative sources after careful consideration. Such supplied names are given in square brackets []. If it is not possible to reliably supply a scientific name, English common names are used. Scientific names or English common names are always supplied for common names in Cyrillic alphabet languages, and no cross references are made. Surveys of parasites of humans and domestic animals are often indexed under geographic headings and entered in Part 6, Subject Headings.

The compilers thank the staffs of the National Agricultural Library, the National Library of Medicine, and all other libraries who have aided us invaluablely by making publications available to us.
